What a coincidence...I used QRZ's database search engine and found
a blank when I entered "Leonard H. Anderson".

Funny, eh...?!?!

anyone with any radio knowledge at all knows that a "10 meter" amp is more than broad enough to be used on 11 meters with very little retuning required (hell, the band edges are less than 600 Khz apart!).

now, there are ways to make a 10 meter amp unusable on 11, but then, it would be mostly unusable on the lower end of 10 as well. :(

so..... the label of a "10 meter amp" os pretty much meaningless, unless you can come up with a bandpass filter that has a 90+db/decade slope and a cutoff just 40 Khz from the edge of band you want to work (good luck with that as the filter would be unwieldy in both size and cost). things like this can be easily done on the upper UHF spectrum where wavelengths are short and parts are easy to fabricate..... not so in the upper HF (wavelengths >6 meters). can you imaging a cavity filter for 10 meters? it would be as big as a house and have a bandwidth narrower than your transmitters operating frequency plus its associated sidebands (am or fm) and wider still than any ssb signal (on 10 meters)

the math on this is indisputable.

My understanding for the US, is that according to the FCC, if you sell ham gear as a business, it has to be type accepted, but you can "home brew" anything you want to use on the ham bands for personal use. If you sell your personal equipment, it doesn't need to be type accepted, either. Also, if you sell an amplifier as a business, it can't operate the 12 or 10 meter band. However, it can be modified to operate it, but that fits in the "home brew" category, again.
I think the stink arose on the posting, because the person posting the original listing, advertised it as a CB radio amplifier, which is illegal in the US and from what I understand, most other countries. Notice that the original poster has not posted in a while, I believe he probably has been warned, because it is off-topic and cross-posted to more than 5 groups, which is considered spam according to the TOS with most ISPs.

The band officially starts at 108. Below 118, though, you're mostly
going to hear navigational (such as ILS) systems and not voice comms.
You'll also find some milair (and other stuff such as satellites) from
137-144, but the "official" band is 108-137.

>The same question, please for Military Air Monitoring ?

The "official" band is 225-400 MHz.

John Kasupski, KC2HMZ

There no FCC procedure for "type acceptance" of ham gear, so ham gear
can't *BE* type accepted.

There's certification for commercially produced ham gear, but that's a
totally different process from type acceptance, and it looks for
totally different things. Calling certified gear "type accepted" is
like calling a ham a CBer - using the wrong term (which seems to be
common practice in English for a couple of decades now)

> Also, if you sell an amplifier as a business, it can't operate the 12 or
>10 meter band. However, it can be modified to operate it

But not by something as simple as cutting a prominent wire that's
labeled "don't cut this wire". By changing capacitors and inductors,
yes - but that's home-brewing.

I think what people may be thinking about is that ham gear must be Part 15 certified (for the receiver) if it's commercially built, whereas home brew gear need not be.

S 97.315 Type acceptance of external RF power amplifiers.
(a) No more than 1 unit of 1 model of an external RF power amplifier capable of operation below 144 MHz may be constructed or modified during any calendar year by an amateur operator for use at a station without a grant of type acceptance. No amplifier capable of operation below 144 MHz may be constructed or modified by a non-amateur operator without a grant of type acceptance from the FCC.
(b) Any external RF power amplifier or external RF power amplifier kit (see S 2.815 of the FCC Rules), manufactured, imported or modified for use in a station or attached at any station must be type accepted for use in the amateur service in accordance with Subpart J of Part 2 of the FCC Rules. This requirement does not apply if one or more of the following conditions are met:
(1) The amplifier is not capable of operation on frequencies below 144 MHz. For the purpose of this part, an amplifier will be deemed to be incapable of operation below 144 MHz if it is not capable of being easily modified to increase its amplification characteristics below 120 MHz and either:
(i) The mean output power of the amplifier decreases, as frequency decreases from 144 MHz, to a point where 0 dB or less gain is exhibited at 120 MHz; or
(ii) The amplifier is not capable of amplifying signals below 120 MHz even for brief periods without sustaining permanent damage to its amplification circuitry.
(2) The amplifier was manufactured before April 28, 1978, and has been issued a marketing waiver by the FCC, or the amplifier was purchased before April 28, 1978, by an amateur operator for use at that amateur operator's station.
(3) The amplifier was:
(i) Constructed by the licensee, not from an external RF power amplifier kit, for use at the licensee's station; or
(ii) Modified by the licensee for use at the licensee's station.
(4) The amplifier is sold by an amateur operator to another amateur operator or to a dealer.
(5) The amplifier is purchased in used condition by an equipment dealer from an amateur operator and the amplifier is further sold to another amateur operator for use at that operator's station.
(c) A list of type accepted equipment may be inspected at FCC headquarters in Washington, DC or at any FCC field location. Any external RF power amplifier appearing on this list as type accepted for use in the amateur service may be marketed for use in the amateur service.

S 97.317 Standards for type acceptance of external RF power amplifiers.
(a) To receive a grant of type acceptance, the amplifier must satisfy the spurious emission standards of S 97.307(d) or (e) of this Part, as applicable, when the amplifier is:
(1) Operated at its full output power;
(2) Placed in the "standby" or "off" positions, but still connected to the transmitter; and
(3) Driven with at least 50 W mean RF input power (unless higher drive level is specified).
(b) To receive a grant of type acceptance, the amplifier must not be capable of operation on any frequency or frequencies between 24 MHz and 35 MHz. The amplifier will be deemed incapable of such operation if it:
(1) Exhibits no more than 6 dB gain between 24 MHz and 26 MHz and between 28 MHz and 35 MHz. (This gain will be determined by the ratio of the input RF driving signal (mean power measurement) to the mean RF output power of the amplifier); and
(2) Exhibits no amplification (0 dB gain) between 26 MHz and 28 MHz.
(c) Type acceptance may be denied when denial would prevent the use of these amplifiers in services other than the amateur service. The following features will result in dismissal or denial of an application for the type acceptance:
(1) Any accessible wiring which, when altered, would permit operation of the amplifier in a manner contrary to the FCC Rules;
(2) Circuit boards or similar circuitry to facilitate the addition of components to change the amplifier's operating characteristics in a manner contrary to the FCC Rules;
(3) Instructions for operation or modification of the amplifier in a manner contrary to the FCC Rules;
(4) Any internal or external controls or adjustments to facilitate operation of the amplifier in a manner contrary to the FCC Rules;
(5) Any internal RF sensing circuitry or any external switch, the purpose of which is to place the amplifier in the transmit mode;
(6) The incorporation of more gain in the amplifier than is necessary to operate in the amateur service; for purposes of this paragraph, the amplifier must:
(i) Not be capable of achieving designed output power when driven with less than 40 W mean RF input power;
(ii) Not be capable of amplifying the input RF driving signal by more than 15 dB, unless the amplifier has a designed transmitter power of less than 1.5 kW (in such a case, gain must be reduced by the same number of dB as the transmitter power relationship to 1.5 kW; This gain limitation is determined by the ratio of the input RF driving signal to the RF output power of the amplifier where both signals are expressed in peak envelope power or mean power);
(iii) Not exhibit more gain than permitted by paragraph (c)(6)(ii) of this Section when driven by an RF input signal of less than 50 W mean power; and
(iv) Be capable of sustained operation at its designed power level.
(7) Any attenuation in the input of the amplifier which, when removed or modified, would permit the amplifier to function at its designed transmitter power when driven by an RF frequency input signal of less than

50 W mean power; or
(8) Any other features designed to facilitate operation in a telecommunication service other than the Amateur Radio Services, such as the Citizens Band (CB) Radio Service.

I recently bought one and it is a good scanner. The only thing I see with it is that it does not display the 'Alpha Tag' assigned to the channel.

Why the hell did he waste his time doing that? It isn't funny or entertaining at all. Dan needs to find more constructive ways of spending his time. Besides, that transmission wasn't really that bizarre for CB.

True, but Part 15 testing has nothing to do with type acceptance. AND,
amateur radio gear is still required to meet the Part 15 radiation
specifications even if the equipment is homebrew. You don't need to
send it off to a certification lab, but if you're radiating trash out
of band, you're in violation of the law.

I'll say that the broadcast service normally requires type acceptance
on transmitters as well, BUT there's still an exception for homebrew
broadcast gear... your local AM station can put a homebuilt transmitter
on the air as long as it meets the technical specifications and it has
a nameplate on the front stating that it was homebuilt. (The wording
required is quite specific but it's listed in Part 73.)

It still has to meet Part 15 specs (all incident radiation devices
do), it just doesn't have to be certified before you use it.

4759. 1st Responder Wireless News

Newsgroup: rec.radio.scanner
Date: 2006-09-24 17:50:33 UTC
From: "nyscan@gmail.com" <nyscan@gmail.com>
Message-ID: <1159120233.767693.61550@e3g2000cwe.googlegroups.com>
Source record: 5839

1st Responder Wireless News (1RWN), already very active, and recognized by most media outlets and Public Safety Officials as the "Industry Leader" in most of the East Coast States, is actively looking for News Correspondents to become active as Incident Dispatchers for your area.

1st Responder Wireless News, a subsidiary company of 1st Responder News, is now consider the leader in the emergency notification industry, sending incident alerts to pagers, cell phones and e-mails.

We are now active in AL, AZ, CA, CO, CT, DC, DE, FL, GA, HI, IL, IN, KY, LA, MA, MD, ME, MO, MS, NC, NH, NJ, NM, NV, NY, OH, OR, PA, RI, SC, TN, TX, VA, VI, VT, WA, WV and Canada. 1RWN has already acquired many well known Paging Notification Services including TAC-9 Paging, East Coast Paging, Ohio Fire News, Maryland Fire Network, Virginia Fire Net, Toronto Fire Net, Metro Fire Paging and the National Incident News Network (NINN), with several additional under negotiations. This is a very exciting time to become involved.

1RWN sends instant notifications for any newsworthy Police, Fire, Rescue, Traffic, Weather and Breaking News event within our coverage areas, to pagers, e-mail, cell phones, PDAs and to our online streaming tickers. The vast majority of our Dispatch Staff is comprised of Volunteer and Career Firefighters, Police/Sheriff Officers, Haz-Mat & Rescue Technicians, 911/ALS/Medevac Dispatchers, ALS, BLS & OEM Personnel and Skywarn Spotters, on local, county, state and federal levels.

1RWN is in the final stages of development of our Dispatcher Rewards Program which will allow our Dispatchers to log into an online store and buy products ranging from cameras to antenna to two-way radios using points they've earned by being active on our system! EVERY Dispatcher on our system will now reap rewards for their hard work, dedication and loyalty!

1RWN has also recently gone live with the industry's MOST COMPREHENSIVE Customer Interface selection process which allows our Subscribers to select EXACTLY what information they want to receive, from what areas and to what devices. In other words, you can select to receive JUST building collapse incidents in Yonkers to be sent to your cell phone, with bridge closures in Philadelphia being sent to your pager. You are no longer restricted to receiving ALL alerts from a region, now YOU decide what you receive from the average 16,000 monthly alerts sent from any of the areas we cover - 37 States, Washington DC, or Canada! EVERY active 1RWN Dispatcher qualifies for complimentary service!

If you are interested, or would like more information, please check out the website at www.1RWN.com and/or e-mail Scott@1RWN.com.

Why settle for the rest...when you can be with the best?

The midnight Cowboy guy can be heard everyday on channel 19 in the Newark, NJ area during morning commute time. He is almost always on with the same stuff...mystery.

Careful, Mark, we can't say such things due to "threats" against
the pro-coders. :-) They are muy touchy about threats against
Them.

> > That sounds fair. In general I've approved what Industry Canada
> > does on communications regulations...a bit more than what the

> over long since

Well, Mark, it is like this: Some of those who have the cool
HOBBY of amateur radio think they are "servicemen" in the
"service of their country" for having that hobby. We can't say
nasty to them because that is not "nice." They rank
themselves as equivalent to soldiers, sailors, and airmen.

They want the ILLUSION that they are doing great and
meritorious SERVICE. Especially the morseketeers. That is
important to them. The illusion, that is. Screw the reality
part of it, that doesn't apply to them (they think).

Never mind that US amateur radio licensee numbers are holding
static with a slight downturn over the past three years. Oldsters
are signing off permanently and newcomers are going in through

the no-code-test Technician class. Most of the latter are STAYING no-code. [General Of The Amateurs Miccolis says otherwise but then he loves cooking the stats to suit his own taste]

As time goes on with the code test gone, the amateur bands WILL change. But, it will be slow since humans are living longer now. Human attrition will, nonetheless, happen. Oldsters don't want to think about that but it is inevitable to all of us. The oldsters want to preserve the illusion that they are still "young," believing in the old, antiquated ways they were impressed with. Why some even believe they are a "service to the country" by having that hobby.

There's no argument with those ancient morseketeers, certainly no "discussion." To them, all must be preserved. [read mummified] Ptui.

Goed, dit is dus gewoon een link naar mijn online scanner.
http://www.xs4all.nl/~bjohan/
Ik draai bij mij de squelch open om even wat ruis te laten horen en druk op wat toetsen van de scanner om wat piepjes te laten horen. Ik heb ook nog even Schiphol toren aangezet. En wat denk je?

American English: "Can" = "May". "Can" seems to be preferred in
common usage. (Then again, just look at how some of our kids spell on
Usenet and in IRC and, knowing that any of them can grow up to be
president, be very afraid.)

Yes, I load my info using a PC control Program ScanControl. When I load back to PC from scanner, it retrieves the info but the scanner will not display info on screen only the frequency..

I'd guess this varies from location to location but:

Probably the topic most often heard here is digital... Interfacing,
coordinating IPs, hooking the system into the Internet, configuring
operating systems, and getting some one's station to work in the
system.

Lots of discussions on antennas which is pretty much the same as years
gone by.

RACES

I'm on my way to the airport (that'd be me)

>"The dog crapped on the living room carpet again."

We have cats, one of which is bigger than some dogs and I've seen him
tackle a black lab about five times his size and win. They don't crap
on the carpet, but do tend to barf up the mouse they caught which is
particularly nice when you are just sitting down to breakfast.
>
>
>Allowing no-codes on VHF & UHF has made discussions less technical and

On average, I think the technical discussions go deeper now than when
I first got on. OTOH people are people. When driving we comment on
traffic. When hung over we tend to ... well...never mind.<:-)) So
topics other than the technical ones are pretty much the same whether
now or then.

I don't know the particular scanner, which is why I'm asking. Does
the scanner allow you to enter alpha tags? Not Scan Control - the
scanner itself. Are there instructions for entering alpha tags using
the keyboard?

That is not correct. If you ask "can I eat a caramel, my reply is you may
(permission) if you can (ability). For all I know you're toothless and have
no ability to chew.

If you correctly ask "may I have a caramel" the correct reply is, "yes, you
may."

Hmm, you think that spelling is a reflection on intelligence? Spelling is a rather arbitrary transliteration of vocal sounds into written text. I have known some incredibly brilliant people that couldn't spell their way out of a wet paper bag, and I have known some extremely facile spellers that couldn't reason their way out of that same bag.

The kids on IRC are using home grown abbreviations to cut down on the number of symbols they need to type to convey a message... Hams do the same thing when using RTTY, or CW.

I am sort of curious as to why my posting of the actual FCC part 97 rules that cover linear amplifiers drew exactly zero comments.

I do... and it's amazing they can communicate at all.

So if everyone under 20 confuses "can" and "may" does this make the misuse of either word correct? Hardly. If a million people do a stupid thing, it's still a stupid thing.

Believe it or not, grammar does have a place in this world. It's the correct means by which we communicate. If we can't communicate correctly, we shouldn't be surprised when things don't go the way we want them.

Just my 2 cents.

Hi All,

Is the BC898T fairly easy to program ? I live in SW Florida and we have numerous agencies I want to include. Trunk tracking is a little confusing to me.

Thanks in advance for all assistance.

Chuck,
you do point out an interesting fact:
in the last 15 years or so, the written language of the internet has come
into its own. it is not unlike English in many respects (American English
is an "evolved" language, much like "net speak").

today's kids know this language well and it does, in fact, convey a lot
of information with a minimum of keystrokes. replacing letter combinations
(the ATE sound) with numbers (like 8) can shorten word lengths while still
sounding the same.

there is already research going on per this subject and several prominent
papers have been presented over the last few years.... it won't be too
long before someone actually engineers an alphabet for the net. that will
be neat to see.

and to think, hams are the ones that actually originated tis concept with
CW starting over 70 years ago.

Sorry you feel that way. These will Help:

Step 1: No more automatic renewals. Individuals must retest and
pass all elements required for their license class.

Step 2: The passing score for written exams needs to be raised to 85%.

Step 3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

Step 4: Make the no-code license one year non-renewable.

ROFL

Why do you have to tease the retard? It's not helping my effort to save ham
radio from becoming like CB.

Why settle for good, accurate, local information from local groups?

You can settle for spam and inaccurate information from a 'media giant'
that claims that the media only uses them for accurate information.

BULL!

Stick with the local groups that have a history in this field. 1STR will
soon fall apart as did NINN, IPN, etc...

Good luck.

Sure is, but first you need Radio Shack Part 20-047 USB serial programming cable, and a copy of Scancat Lite Plus, or similar software. It is much slower but you can also do it by hand! which will take some time, you can also look around on the web as there are many sites that show you how to build your own programmer cable.

I use my Radio Shack 20-047, to program some of my ham radios, and even a couple commercial radios.

Hope this helps,
Walter kg4bvd

Actually that's pretty accurate. The Pro2096 and the Pro96 are for the
most part identical radios. You can clone between them and they both use
the same programming cable and software.

There are a few options when it comes to software, I recommend Win96
from Don Starr (www.starrsoft.com).

The programming cable is available from a variety of sources. Radio
Shack has them and you can get some from eBay and other places. I
actually use my Icom cable with a Stereo to mono adapter. I have to
adjust the reply time a bit, but it works fine.

The 2096 is a fine radio, it decodes the digital modulation very well
and the V-Scanner is pretty neat for traveling. It programs more
conventionally than the 996 (Is this good or bad, you decide...)

It has been passed up by the Uniden 996 in some of the features
available however, as it doesn't track 700 MHz. trunking, it requires to
to select PL or DPL for tone search, has less memory channels and limits
you to 10 banks. The 996 also has things like Fire Tone Out and GPS
connections and more, any of which may or may not interest you.

You can usually get a new 2096 for about $400 on sale at Radio Shack and
some dealers, while the 396 is usually between $525 and $550.

While I have both the 996 and the 2096, I prefer the 996 for most
scanning uses. I use the 2096 mostly with a program called Pro96Comm
that decodes the 9600 baud data signals used on a local trunking system.

Others prefer the 2096, if they don't need the 996's features or coverage. If 700 MHz. trunking is in your area or coming, I would go with the 996. (The 2096 can monitor 700 MHz. after programming with Win96 but can not trunk track there).

Thanks for all the helpful information.
One more question, I currently have the Pro-96 and recently purchased a used BC796D, will the 796 do 700mhz trunking?

Thanks again,

I took a look at the site. From what I can tell they use volunteers to send pager alerts of interesting traffic and then turn a profit on the volunteer labor by selling subscriptions. Is that an accurate description?

That cable is not compatible with BC898, also there is much better software
check
out Scancontrol or ARC898

This is Correct I can not edit out any pop ups this is a free phpbb forum.
The popup blocker blocks most of mine out. Here is the rest of the website
Visit the new website WCIL Scanner Radio
http://wcilscanner.home.insightbb.com/

>But, you have trouble with English, so it is to be expected.

You don't get it, do you? But if you insist, many many years ago you
HAD to learn Latin to attend university. Then, a few people bucked the
trend and started removing the requirement to know Latin. Oh sure, the
old guard resisted. Many professors refused to work without Latin as a
requirement, ostensibly because they felt that the Latin requirement
would demonstrate serious commitment to learning. But the world
progressed and now conversational Latin is no longer required, save
for a few medical and legal references.

Now, would you tell your doctor that he is not a real doctor if he
can't carry on a conversation in Latin? He just might be able to, but
odds are he will only know what is necessary to do his job
effectively.

Actually I thought the 11 Meter band was given to CB in 1955 and not 1957. A very mute point indeed.

What is there on which to comment? "Can't argue with the horse's mouth"

(not quite right, is it?)

Here's another one: "If you can't dish it out, don't cook it." I have a
friend who came up with a whole page of malaprops (collected sayings
from his wife)

Well, I sort of thought it might draw a few "Oh, gee, I guess commercially
made ham linears have to be FCC type accepted after all"'s.

The guy making the CB linears fails a whole laundry list of requirements
for type acceptance of a Ham linear.

And because he isn't a ham, he cannot legally build even *one* such unit,
let alone go into production.

That was the Class D citizens band. I believe Class C is also in the 27 MC
range, with low bandwidth digital modulation for remote control, etc.

Whatever happened to classes A and B? I recall Class A was AM on the 460 MC
band.... took a huge amount of bandwidth both because of the modulation
method and the fact the transmitters were generally not very stable...

I don't think anyone except him thinks otherwise.

The thing is... what will the FCC do about it? And are they going to do anything about the touch lamps sold at my local Wal-Mart which spew trash all over the HF band, or the local computer store which has a roll of "FCC Part 15 approved" stickers which they put on uncertified (and often uncompliant) PCs?

Have you tried requesting them from your Human Resources Department?
They're required by law to provide them to all employees.

Ok, thanks for the heads up I appreciate it.
I've been using scanners for a long time, and it's getting tough to keep up
with all the new models and their functions.
I currently have a BC9000XLT,BC780XLT,BC796D,Pro-96, and everyone is
different.
I still like my 9000 for milcoms.............

Thanks again.

The Human ear.

It doesn't need batteries, can provide reliable copy when band conditions
are bad, or the sender can't send well. All you need is a pencil and
paper for hard copy.

It takes a little work to get good at the Ear method, but no one has ever
has any problems learning it unless they're sick, lame, or Lazy.

I know what you mean with trying to remember different scanners... At
home I have a 996, 3 780's 2 BC15's a BC796 and a 2096. You know how
many times I tried to enter freqs on the 2096 from the Manual mode
instead of hitting the Program button?????

4883. ID Tracker II Beta Update Available

Newsgroup: rec.radio.scanner
Date: 2006-09-28 00:44:18 UTC
From: "David M. Hitchner" <biteme@spammers.net>
Message-ID: <pVESg.16218$GY5.8069@bignews6.bellsouth.net>
Source record: 5763
Cross-posted to: rec.radio.scanner,alt.radio.scanner

New features in this version (0.4.0):

- Modified code to display all 100 Quick Key systems (0-99) if used.
- Add capability to read ID tag from the scanner if the ID is not currently identified in ID Tracker II.

See link in signature for web page.

I have not gotten much feedback on ID Tracker II so either things are going extremely well or I am just not being told if there are problems occurring. I would like to hear from anyone experiencing problems with the program.

All your ear needs to decode RF is a pencil and paper?????
I certainly would like to see a demonstration. I could
sell my IC-756PRO and just use pencil and paper.

Ok here it is, after NUMEROUS scanners/receivers owned and many hours of listening, I have come to a conclusion. The Pro-2006 with the OC456 full and the Probe v7 software is the BEST PC OPERATED SCANNER EVER MADE!! What a spooky combo this is! Lighting fast scanning,DTMF tone decoder, sensitive and selective, discriminator tap. But wait it gets better, PROBE v7!! If you haven't witnessed the POWER of probe, do yourself a favor and check out the reviews. WOW! The hype IS justified. No scanning software comes close! Ok, analog scanners are out right? WRONG! With a discriminator tap you can decode TONS of digital sigs. There are LOTS of FREEWARE programs out there! Now, lets move on to the condition of the equipment. On a scale from 1 to 10, I give it a 9.5! EVERYTHING WORKS on this baby! Here is what you get: PRO2006, ANTENNA, MANUAL,PROBE V7, SERIAL CABLE!! This is a KILLER scanner!! Check out the info on this rig! http://userweb.suscom.net/~pro-2006/

Here is the link to ebay

The foam duck in question is the one who thinks anyone is _bothering_ to
"guess" who you are. You adopted Woger Wiseman's style, and that's enough
to get you the nickname of "Wabbit". Woger was never a flamer, but he
thought he was, just like you.

Have you heard the indecency on Omega One lately. Todds NAL is on the
way, and when Todd is gone, the only friends you'll have left on the
internet are AB8MQ, N0VFP and K4YZ. With friend like yours, who needs
enemies?

So what do you like to talk about then? Roger's Ass?

I like to talk about saving ham radio. How's your code practice coming
along?

SC

4918. Why don't KB9RQZ, K4YZ, AB8MQ, N0VFP, and N9OGL ever want to talk about radio, only gay stuff?

Nice strawman. The pixels form a full complete picture. Beeps are just
beeps. One dimensional. That they form a recognizable pattern does not
make them more. Humans are highly visual creatures. I have listened to
code for years. Being able to make out a few letters does nothing for
me.

It's just plain dull.

What a shame that we all have to agree on how to be a ham. Oh, wait -- we
don't.

Effective right now, everything legal that anybody wants to do for their
personal enter-ham-tainment (don't try to look it up) is OK with me.

Made Extra in 1995 and had to do 20wpm. I did it and have NEVER used CW
since and have no intention to ever do so..even if "someone is dying!"
IMHO it is an outdated requirement and will/should be dropped altogether
very very soon....

Don't worry, you've had the rep for at least the past six years.
Nothing's changed of late, except for Wabbit trying to use AUK to bash
Mark (who won the GK because he was a fucking boring k00k, not because
AUK was catering to Woger/Woger's copycat). On that note:

4. What's this newsgroup (AUK) NOT for?

This group exists for recreational Kookology, not for Very Personal
^^
Vendetta. It is not to be used for general harassment of someone, or
for
^^^^^^
net abuse such as spamming and flooding and cancelbombing in an attempt
to gain vengeance on someone or get the denizens of AUK to shut up.
Either way, it won't work, it's very messy, "Bob" will give you triple
your money back, and you don't get a life.

Also, we [tinw] are not in the business of harassing the vulnerable or
the insane. Occasionally an apparent net.kook proves to be genuinely
ill. In such cases the person is disqualified from winning awards and
other posters are asked to avoid exacerbating his or her problems.
Similarly, trolling or kook-hunting in support groups is strongly
discouraged.

Snarky

I'd like to talk about building a 6 meter homebrew rig. You got any
info, expertise, or pointers for me in that band?

> Roger's Ass?

Don't know who Roger is and I could care less about talking about
anyones ass unless it is a hot chick.
>
> I like to talk about saving ham radio.

You like to talk about morse code. Last I checked Ham Radio was alive
and well.

> How's your code practice coming
> along?

Been playing with it a little but concentrating more on the theory right
now. I knew it well in Boy Scouts 25 years ago. Taking that test in 2
weeks.

Code isn't hard. I was fleunt in code as a 12 year old in Boy Scouts
along with most of the troop. We sent code back and forth by
flashlight from tent to tent when we should have been asleep. When we
got older and didn't have to go to bed at 10 o'clock we just used words.

Not his trolling, his k00kery! Also, your inept attempts at net.KKKopping
were a major factor. But it was mainly the k00kery. Homophobia is kooky,
you see.

I didn't say I was going to "killfile" you. In fact, I neither nominated
you nor seconded your nomination for the Golden Killfile -- I think I
voted for you, though that was a tough field (both Tholenator and
Warhol!) -- I told you you were nominated for an award that happens to
have the word "killfile" in it, meaning you are worthy to be ignored by
everyone, not that everyone has to killfile you. Remember, no one ever
forced you to x-poast to AUK. You did that all by yourself.

Which is why it was said, for many centuries, I suppose, that it's
speech that separates us from the animals. (We're a lot less visually
oriented than a lot of other species.)

>>I have listened to
>> code for years. Being able to make out a few letters does nothing for

I have listened to Turkish for years. Being able to make out a few
words does nothing for me.

But there are a lot of Turks who feel otherwise.

Your insularity is showing.

No, numbers are decreasing because ham radio has been dumbed down so
having a ham license isn't worth anything anymore and people are leaving.

Fortunately today, I couldn't hear your monologue very well, But I noticed
you stole some of your grandmothers 78's and are playing them now. ROFL

I'll give you one thing, you got variety. It's sounds shitty, but it's
variety.

Woger is currently nominated for a kook award, and is a very strong
contender. I happen to be the one who caused his latest foamdown. How am I
the one who has been used?

Code testing is absurd. The government shouldn't be in the merit badge
business.

If you really need a merit badge to hang on the wall, listen to W1AW
during a qualifying run....

Posting in all caps is me YELLING at you to put up or shut up. Your
steadfast refusal to do so demonstrates to the world that you have no
grasp of the issue being discussed and have resorted to lies to try
and make a point when you really had no point to make.

This is no fun anymore. You're just another worthless troll. Mea culpa
for not seeing it sooner. My bad.

"Bullshit"???? Are you saying that I am NOT in Canada? Look at the
message header. You DO know what a header is..do you? If not, have
your mommy or daddy help you by showing you the header and then look
for my IP address. With a simple search [mommy or daddy can help you
here too] you will discover that I am connected thru Shaw Cable in
Edmonton Alberta.

Speech has infection. You can say the same sentence 10 different ways
and it can have 10 different meanings depending on the emotion invoked
in the speech. You know....the HUMAN element.

>>> One dimensional. That they form a recognizable pattern does not

>>words does nothing for me.

>>But there are a lot of Turks who feel otherwise.

>Bet you can easily tell what kind of a mood the speaker is in just by
>his tone.

I can tell that on the air too - in CW. I can't tell it here, so I guess you'll be leaving Usenet.

> I don't speak Ukrainian but I sure knew when my grandmother
>was mad at me.

Not by her words, though, which is what you're claiming. So tell me, what mood am I in at the moment? Evidently, since Usenet is a visual medium, you can tell.

Or you just don't know what you're talking about.

>>Your insularity is showing.

>Not insularity...humanity.

Which has nothing to do with communication, which every life form participates in - even those who have no analog of vision.

Blowcode can, in his small mind's imagination, do all sorts
of things.

Here's a "plain and simple fact" of possible probables in
case of anyone ACTUALLY dying or needing help:

1. By telephone, wired or cell: Dial 911, the universal,
manned 24/7 emergency number. In turn, the 911 operator
will communicate with the appropriate agency by wire
or radio (there are 3 basic radio bands for public
safety radio services in the USA, one more coming).
There is one cell phone for every three citizens in the
USA. Speed as fast as a 911 conversation.

2. By - gasp - Citizens Band Radio Service transceivers in
urban areas. CB radio users out-number amateurs by 4 to
5 to one. Considering that some radio amateurs have to
work for a living and are not AT their ham radios but
highway truckers are both working and with their CBs,
the virtual ratio is probably double 5:1. Probability
of return to first communication about help is high
considering that many CB transceivers have guard
receivers always tuned to the emergency channel. Speed
of that is variable, may take three times longer than a
conversation with a 911 operator.

3. If flying there are two basic ways to indicate help.
Overland airways routes will have ATCRBS running and a
transponder "77" prefix code will generate a flag on
the ATC beacon display. On civil airways, 121.5 MHz
is the international universal emergency frequency
(243 MHz for military radio). Speed of either is a bit
longer than with 911 operator calling but quite fast.

4. On the water, in inland waterways and harbors, there is a VHF FM channel for emergencies but common in-use frequencies would get attention for real calls for help. GMDSS is available on ships over deep water as well as an HF radio voice channel for international maritime distress calls. Since maritmers are noted for adherence to SOLAS (Safety Of Life At Sea), the response would be fast.

5. On land, lacking cell coverage (rare now) but on or near highways, there is high probability that any motorist or trucker would have a CB or possibly a business vehicle with a business radio would be passing (PLMRS vehicular radios are quite common with small and large businesses). Any passing public safety agency vehicle would have a radio transceiver capable of directly contacting appropriate help. Farmers are increasing their use of private radios and might be nearby. FRS and GMRS HTs are also becoming more common for both private and business use. Speed of help calling would be variable depending on location, nearby vehicular traffic.

6. Lacking any of the above, one might look for a non-TV or non-CB antenna on a house...high probability of that belonging to a radio amateur. [such a search could take many hours, though] If the date and time corresponded to a ham contest time, the ham might not respond quickly. Even if the ham responded and began calling, there is no assurance that anyone would hear or pay attention to some emergency plea; that would violate the normal conversation that goes on in ham bands and cause much on-air disputes, further clogging calls for help. Speed of help calling is variable, anything from several minutes to many hours. Not that it matters since the victim already died after trying to get through all the ragchewing, self-styled radio police, and general cat-calling by other amateurs.

7. Blow Code is of NO help since he is not verified as a valid (or invalid) licensed radio amateur.

or you if you had to you could send ing sos or oso the later seems
likely to get you aid the fastest from the CW they will df you fast to
come and castise you for it and likely then well at least rennder first
aid as they take you to task for daring to misspell sos

Are YOU qualified? We gather more information about our environment
from vision than any other sense. Now, that's NOT to say that we have

the best vision in the animal kingdom. Our vision is refined and
depended on at the expense of our other senses. Ever have a pet cat or
dog that was blind and deaf? I have and you would be surprised how
well then can adapt with just the sense of smell and touch alone.
Humans need some degree of assistance.

This is an strawman. You know full well what I mean.

I'll tell my daughter's occupational therapist to quit using a monitor
screen to teach her how to recognize emotions of people's faces
pictured on the screen. After all, I have just been told that you
can't view a persons mood by the look on his face if it is composed of
pixels on a screen.

>When you actually get into high school, let us know.

That was uncalled for and childish. Your arguments are based on a
false premise that I and other want to ban the use of CW or that it is
useless. We're only opposed to it being required to pass a test. I
question those who say it's as good as a human voice. It isn't and you
can't say otherwise. Romanticize it all you want. It is what it is.
Nothing more.

Apples and oranges. Deaf-blind people get along pretty well too, if
they're given food, water and all the comforts of home by someone
else.

>Why would I want to leave usenet?

You don't like CW because you can't tell emotions on CW. Since you
can't tell emotions on Usenet, you evidently don't like Usenet. Or
you're being inconsistent.

>>> I don't speak Ukrainian but I sure knew when my grandmother

Since I can fully communicate using "emotionless beeps", no.

>I'll tell my daughter's occupational therapist to quit using a monitor

The original discussion was about requiring it, not banning it. My
attention span's not that short.

> We're only opposed to it being required to pass a test.

So be opposed to testing altogether. Oh, there's already a way to get
on the air without a test. You just don't like that way. Now that's

being childish.

>I question those who say it's as good as a human voice.

How can you question a language you don't even begin to understand?

>It isn't and you can't say otherwise.

Sure I can - I understand and use it - you don't, so you can't
intelligently discuss what it is or isn't at all.

There is a lot more information in our environment than just raw data.

>>Ever have a pet cat or
>>dog that was blind and deaf? I have and you would be surprised how
>>well then can adapt with just the sense of smell and touch alone.
>>Humans need some degree of assistance.

A blind person cannot sniff his way around as well as a dog or cat,
therefore a white cane is needed or an unchanging closed environment.

>>Why would I want to leave usenet?
>
>You don't like CW because you can't tell emotions on CW. Since you
>can't tell emotions on Usenet, you evidently don't like Usenet. Or

My turn to say apples and oranges then. Can you quote where I said
that I didn't like CW? Basically, I say that it's only good for
submitting raw data, like usenet. Didn't say that it was a bad thing,
just not a full, complete way to engage in human discourse. It should
also not be a barrier to the use of amateur radio.

>>>> I don't speak Ukrainian but I sure knew when my grandmother

>>I never said I could tell by her words.
>
>That's what this discussion is about, so I guess the grandmother story
>is just a red herring.

No that was NOT my point. Let me be more precise: The inflection added
by actual voice results in a conversation that is much more than the
sum of it's parts, the parts being the words used. My grandmother
example simply showed that inflection adds so much more to a
conversation that it can, at times, convey some information on it's
own without words.

>> Usent is text, by the way, not visual.
>
>I'll have to start using my ears to read your posts, then.

Raw data [text] is all that's needed for this conversation.

>it. Did you forget what you were talking about?

You insist on reducing the term "communication" to just an exchange of
data. I am trying to point out that there is MUCH more to human
interactions than just data.

The fact that I fully support technical testing is well established.
Others who want to end code testing generally feel the same way. This
is well established.

>>I question those who say it's as good as a human voice.
>
>How can you question a language you don't even begin to understand?

I have already pointed out that you can get much information beyond
just data. And, no matter what you say, beeps are just data.

>>It isn't and you can't say otherwise.
>
>Sure I can - I understand and use it - you don't, so you can't

>The numbers are down for a variety of reasons, but I suspect that
>computers and the internet are the major factors, not the CW
>requirement.

The ready-built Personal Computer first appeared in 1976,
30 years ago (the "IBM PC" debuted in 1980, 26 years ago).
The Internet went public in 1991, 15 years ago.
"Restructuring" to drop the morse test rate to 5 WPM
for all such tests happened only 6 years ago.

The peak licensing of 737,938 happened on 2 Jul 03, just
3 years ago. [they've been dropping at an average of 7K
per year ever since]

I disagree on your reasons stated in your quote above.

>When I ask technical people about why they haven't
>acquired an interest in amateur radio, I never get the CW requirement
>as a response.

Strange, I hear that response. Having been IN radio-
electronics for over a half century, I DO know some
"technical people." :-)

Manual radiotelegraphy was a MUST to use early radio
as a communications medium. The technology of early
radio was primitive, simple, and not yet developed.
On-off keying was the ONLY practical way to make it
possible to communicate. Morse code was then already
mature and a new branch of communications was open
to use by downsized landline telegraphers.

> They simply view the whole service as outmoded in the
>face of modern telecommunications.

PART of that IS true. NOT all of it.

What IS outmoded (technically) is sitting only on HF
and "working" other stations with morse radiotelegraphy.
Amateur radio is the ONLY radio service still using

morse radiotelegraphy for communications purposes.

Another thing outmoded is the strict "necessity" to use a formalism in "procedure" AS IF it was "professional" radio. That formalism was established between 50 to 70 years ago. Amateur radio, by definition, is NOT professional. Too many olde-tymers want to PRETEND they are pros in front of their ham rigs.

But, there is still an enormous area of the EM spectrum that is still open for experimentation, for just the fun of doing something out of the ordinary above 30 MHz. That can be a very different RF environment, much much different than the technology available in the 20s and 30s. It has exciting possibilities...except for the rutted and mired olde-tymers unable to keep up with new things, secure in their own dreams of youth and simple technological environment.

>Let's face it.. the romance is gone.

Oh, boo hoo...the "romance" of the 1930s is gone? Yes, it IS. The "pioneering of the airwaves" below 30 MHz has been DONE...mostly by the pros of radio (despite what the ARRL claims). DONE a long time ago. The solid-state era came into being about 45 years ago and has revolutionized ALL electronics (radio is a subset of that).

Except as memorabilia trinkets of the past, GONE is the analog VFO, GONE is the one-tube regenerative receiver, GONE is the single-crystal-single-frequency Tx, GONE is the big, bulky AM modulator amplifier, GONE is the not-knowing-when-the-bands-are-open (solar activity and ionosonding solved that and HF MUF is a predictable item that can be found by a computer program). Except for the boatanchor afficionados, vacuum tubes are GONE for nearly everything but high-power transmitters.

The radio world of today is NOT that of 1950, nor of 1960, nor 1970, nor even 1980s. It keeps changing, advancing, the state of the art never static. For the stuck-in-the-mud olde tymers that is terrible...they feel insecure on not being able to keep up, become aggressive to newcomers ("no kids, lids or space cadets") and retreat to the "secure" mode of their youth, "CW." But, they want to make sure They get the respect they feel they've "earned" (as if) so they try and try and try to bring all down to THEIR level...the code test MUST stay..."because."

There are 100 million two-way radios in use in the USA alone, millions more in other countries. Those are the

cellular telephones. There are millions of VHF and UHF transceivers in the USA, working daily for public safety agencies, ships, private boats, air carriers as well as private airplanes. There are tens of thousands of HF transceivers in use in the USA, users being everyone from government agencies to private boat owners, ALL exclusive of amateur radio users. Where is the "romance" in all this Plenty from a cornucopia that all have grabbed? It is GONE, yes.

But, NEW "romances" await. DIFFERENT ones, I'd say a helluva lot more complex than old, simple "radio." We can't relive old "romances" except in our minds and we can't grow physically younger. Only person-to-person romance is TRUE, the other "romance" is of the imagination, of the fantasy of what was once there. This fantasy "romance" can't be brought back. It can't be legislated into remaining static. The rules and regulations have to change to keep up with the NOW.

If you really are an amateur operator, why can't you give out
your license callsign?

How DOES one have a "reasoned debate" with an anony-mousie
such as "Nada Tapu"?

I've not seen that such is possible in here except for two and
both of them are self-admitted Canadians.

Thank you. Feel free to use any part. I would be nice to
get credit for it, a common courtesy.

> but yes their is still magaic I play with it (although yes acess to HF

"Magic" is a subjective term. The "magic" of HF worldwide comms
dissolved into reality for me in 1953 on seeing such wholesale
"magic" working 24/7 in tying US Army (and other military) into
the large network going back to the states.

"Different strokes for different folks."

ARRL is still fixated on HF and the "magic" of morse. Since they
influence (if not brainwash) as many US hams as they can with
their huge publishing effort, we aren't supposed to negatively

critique them. That's "not nice" to those who've had their brains washed in that way.

I've seen "real" magic at the Magic Castle in Hollywood, CA. That's mainly a professional association of magicians/illusionists. One can't gain entrance without being admitted by a member. I've had the marvelous opportunity to go in three times there...and be totally fascinated by the illusions. Whenever I see some ham bring up "magic" I think of the Magic Castle. A lot of hams ascribe "magic" to HF comms but that is their own private illusion (or delusion, as the case may be). Shrug. To each his own but I don't like others trying to cram Their delusions into everyone.

Probably because it's not safe to go waving around more information than you
have to.

http://www.blogs.oregonlive.com/oregonian/newsupdates/default.asp?item=194639
Dispute On CB Airwaves Leads To Fatal Shooting

Yes, the non-CB amateur bands tend to be a little more mature than the
citizens band (or at least as far as the
Washington/Clark/Multnomah/Clackamas County area is concerned).
Unfortunately, Usenet and the Internet are not. If you don't believe me,
go watch Dateline when they sting Internet weirdos sometime to see the
worst of them.

Actually Len, almost all amateur radio operation has
been outmoded by advancing technology which has made
amateur radio first to be redundant and later to be
obsolete. I'm still using the same modes for amateur
radio that I used more than half a century ago.

My daughter lives in New York state. 50 years ago,
I would have tried to talk her into getting a ham
license. Today, Sprint cellphones allow the two of
us to communicate any time, day or night, for free.

5050. Fair Question For Dyslexic Hams

Newsgroup: rec.radio.scanner
Date: 2006-10-01 14:46:49 UTC
From: Jack Ricci <ricci@mnsi.net>
Message-ID: <efokcn02s86@enews3.newsguy.com>

These are serious questions I have of CW operation, with no harm, malice, hurt, or put-downs intended for anyone, so I hope this thread does not degrade to that point.

When listening to CW on my scanner, are there any tell-tale indications that the operator is dyslexic? Does a dyslexic ham use the same speed, protocol and " short-hand/short-form wording " as a more proficient ham would use in communicating CW? Do dyslexic hams ever really use CW, or would dyslexic hams ever even consider the use of CW on a regular basis? Are dyslexic would-be hams able to pass the CW portion of an exam to get into a higher class of license and increased privileges?

I meant these as very real and serious questions. I have a dyslexic daughter which I'm still trying to comprehend and understand by trying to view reality as she sees it. Wifey and I are somewhat still feeling guilty of having eroded her self-esteem when we were raising her by using usual methods of discipline when she screwed-up excessively, until we finally realized that there was a very real problem that needed dealing with, but in non-usual ways. This is 25 years later, and I still feel like shit about the situation and go way out of my usual way to help her without making the other 3 siblings feel left out, so maybe we should lighten up on some of the dyslexic guys/gals in these newsgroups for having the balls to be here in the first place, let alone wanting to communicate with those who do not have a dyslexia problem.

More power to the dyslexics...I think they should be made to feel welcome. The crappy name-calling should stop, though.

Jack

some are able to dylexia comes in degrees not all dyslexics are afected
to same degree

OTOH I know of No dyslexic ham that has been able to USE CW onnthe air
without being roundly flamed by the other users of CW

...Nope..." high " was the last word, and I left out a " dot " on the last "
h " to make it an " s " as in " higs " instead of " high " . Just testing
to see if anyone out there cared enough about CW at all to catch
that...Proved my point, I guess :) :) :)

That is true in essence for all those who "work DX on HF
with CW." :-)

Some will point to modern techniques in radio (DDS, PLL
frequency control, solid-state PAs that need no tuning
controls, etc.) as being advancements. Trouble is, those
advancements came from the designers-manufacturers,
advancements to capture market share of ham consumer
electronics. Using only on-off keying with a state-of-the-
art transceiver seems a waste of available resources in
that equipment.

> My daughter lives in New York state. 50 years ago,
> I would have tried to talk her into getting a ham
> license. Today, Sprint cellphones allow the two of
> us to communicate any time, day or night, for free.

One in three Americans has a cell phone now
according to the US Census Bureau. Each cell
phone is basically a little two-way radio.

No "CW" test is needed to use a cell phone. :-)

I just completed an exchange of files (including hi-
resolution photographs) this morning with another
in Europe. Took only a few minutes. The Internet
stretches over most of the globe, is unaffected by any
ionospheric variation. Those files couldn't be
exchanged via "CW" on HF. [maybe the "phase
shift" impairs such information transfer...:-)]

No "CW" test is needed to use the Internet. :-)

But, in 2006 the FCC regulations still require any radio
amateur to test for "CW" in order to operate on bands
below 30 MHz. None of the other radio services
require that. <shrug>

LenAnderson@ieee.org

Heh. But, in here, coders are the only ones with "facts." Anything
a no-coder says is "wrong," "in error" and other endearments. :-)

True enough. But...the coders HAVE their rank-status-
privileges and seem to enjoy looking down on no-coders.
All must do as they did or be called "wrong" or "in error."

Early radio was just a telegraph system without poles and
wires between stations. Mythical tales have turned early radio
into something greater than rocket science.

Ah, yes, the Great 500 KHz "Experiment." AS IF the 500 KHz
region hasn't ALREADY had 80 years plus of determining
whether or not it works for communications! :-)

Good old League, leading all "Back to the Future." :-)

It's about the same as those who love to Re-Enact the
American Civil War or the American Revolutionary War.
Play-acting at "pioneering" over 8 decades after that
frequency region was picked for the first maritime distress
and safety reserved frequency.

"Ore" from a mine. The pro-coders say "I've got mine, nya-nya."

It's getting to be "Back to the Future, Part Infinity" if things like the Great 500 KHz Experiment is a sign of things to come from the "representative of all amateurs" in Newington.

Their other "Experiment" is a "contest" to see who can best come up with a whole ham station for LESS than $50 in new part costs. Whoever "wins" that gets a really hefty prize of $100 cash and Publication in QST! Oh, and it is 40 meters only, but "allows" SSB voice to be included. :-)

CW is my favorite mode. I'm a member of FISTS (8741).
Strange that I helped design the 8741 at Intel, huh?

Vanilla Bean ice cream is my favorite ice cream. But
I wouldn't dream of forcing my favorite ice cream on
anyone else, including my fellow amateur radio
operators. QSL?

>>being childish.

>The fact that I fully support technical testing is well established.

But you're being inconsistent. You only want to eliminate code
testing because YOU can't see any merit in code. Many people can't
see any merit in knowing the laws or in having any technical

knowledge, so why not eliminate testing altogether?

Because you want your views to determine what's done. No other cogent reason.

>Others who want to end code testing generally feel the same way. This >is well established.

Yes, it is. They want everything done the way they want it - just like you.

You want to get on the air code-free, use the no code bands - CB. You want to get on frequencies that allow code? Pass a code test. It's not rocket science.

>>>I question those who say it's as good as a human voice.

>>How can you question a language you don't even begin to understand?

>I have already pointed out that you can get much information beyond >just data. And, no matter what you say, beeps are just data.

To you. Why should that matter to the FCC? As I said, you're not qualified to discuss something you have absolutely no understanding of - let alone make decisions about it for others.

>Keep on using it then. But don't tell me that I must know it in order >to use my voice on the radio.

You can use your voice on voice bands - called CB. That's what CB is for - communications for those who don't want to pass a ham test (which includes CW). Like you.

It's funny, and most telling. The no-code hams have everything over 30
MHz, but it's the code hams that are the one's moving ham radio forward
and doing anything technical wise. I guess the no-coders are still trying
to figure things out.

Try to stick to one argument at a time. You were arguing for voice -
now you're arguing against it. Or is just any argument that might
possibly be construed to make CW look bad?

>>>Ever have a pet cat or
>>>dog that was blind and deaf? I have and you would be surprised how
>>>well then can adapt with just the sense of smell and touch alone.

>A blind person cannot sniff his way around as well as a dog or cat,
>therefore a white cane is needed or an unchanging closed environment.

Deaf-blind dogs and cats don't normally walk around the streets
without aid. (Domesticated cats, btw, aren't scent-oriented, they're
vision-oriented.)

>>>Why would I want to leave usenet?

>>You don't like CW because you can't tell emotions on CW. Since you

And you don't want to use it - but you do want to use Usenet.
Inconsistent.

> Didn't say that it was a bad thing,
>just not a full, complete way to engage in human discourse.

Neither is voice.

> It should also not be a barrier to the use of amateur radio.

It's not a barrier to USING radio - it's a barrier to one particular
hobby, which incorporates CW as part of itself. You want to ride a
bike as a hobby but not use wheels?

Code - ham.
No code - CB.

If that's too complicated for you to grasp, maybe you should take up
grass-watching as a hobby.

>>>>> I don't speak Ukrainian but I sure knew when my grandmother

>example simply showed that inflection adds so much more to a
>conversation that it can, at times, convey some information on it's
>own without words.

So if she screamed at you, in Ukrainian, with her face all screwed up,
"You were so good!", you'd get the proper information, that she was
about to take you to the wood shed for the terrible thing you'd done.
Right?

I can convey as much emotion in CW as your grandmother could in
Ukrainian. You don't understand CW, so you can't understand how that
could be true - which is why you're not qualified to discuss the
matter.

My job is like describing the difference between red-orange and orange-red to someone who's been blind from birth. "Red-orange is redder than orange-red." "But ..." No buts - it is. Someone who's never seen just can't understand.

>>> Usent is text, by the way, not visual.

>>I'll have to start using my ears to read your posts, then.

>Raw data [text] is all that's needed for this conversation.

Raw data is all that's available for communication.

>You insist on reducing the term "communication" to just an exchange of
>data. I am trying to point out that there is MUCH more to human
>interactions than just data.

There's much more to human interaction than lexical communications, yes - but we're talking about lexical communications here, so anything else is totally irrelevant. You can't have any more than lexical communication by radio.

But tell bees that their dancing is just raw data. Then translate a bee dance for me, blind man.

Maybe the point was that a lot of us who can read CW should wear their
glasses when reading it on a screen. I swear I saw it as an H. Even
the second time, after I read this post. (That's what astigmatism
will do to you.)

If that's true, it's certainly a change from half a
century ago when we HF hams observed the VHF/UHF
hams revolutionizing amateur radio with their
technical expertise.

Contrary to Blow Code's fantasies, "the reports of my demise have
been exaggerated." [more or less a quote of Samuel Clemens]

I've never had a heart attack, have never died. Now quit imaginging
things that haven't happened. If you keep on, the new moderating
team may make you sit in the corner.

From: Al Klein on Sun, Oct 1 2006 3:25 pm

>On Sun, 01 Oct 2006 04:05:15 GMT, Opus- <jbu...@shaw.ca> wrote:
>>On Sat, 30 Sep 2006 23:00:08 -0400, Al Klein <ruk...@pern.invalid> spake thusly:

>>The fact that I fully support technical testing is well established.
>
>But you're being inconsistent. You only want to eliminate code
>testing because YOU can't see any merit in code.

No, there are thousands and thousands of us who want to
eliminate the US amateur radio code test for any
license. It isn't confined to Jim-"Opus".

Go read ALL the comments to last year's NPRM from the
FCC. I did. Can you?

If you look real close you will see that the FCC doesn't
think that the code test is necessary for their needs
in determining which amateur applicant should get a
license. It didn't in 1990, it didn't in 1998, it
didn't in 2004.

The rewrite of Radio Regulation S25 at WRC-03 eliminated
the international need for all administrations to test for
radiotelegraphy for privileges below 30 MHz. It is
optional to include or exclude by all administrations.
The International Amateur Radio Union wanted that rewrite.
The ARRL did NOT. The IARU won.

> Many people can't
>see any merit in knowing the laws or in having any technical
>knowledge, so why not eliminate testing altogether?

Illogical, incosistent reasoning. The discussion is about
the radiotelegraphy test, a stand-alone test solely for
manual radiotelegraphy. It is NOT about the written test
elements so why mention them? [rhetorical question]

You MUST mention the writtens as somehow "related" but
it never was. It's a common ploy by pro-coders but
still irrelevant.

>Because you want your views to determine what's done. No other cogent
>reason.

Tsk, tsk, tsk. Insulting insinuation there. Bad form.

>>Others who want to end code testing generally feel the same way. This
>>is well established.
>
>Yes, it is. They want everything done the way they want it - just
>like you.

Tsk, tsk, tsk, more insulting insinuation of alleged
"bad conduct." :-)

>You want to get on the air code-free, use the no code bands - CB.

There is only one "CB band." It requires NO TEST at
all. Never has. :-)

>You want to get on frequencies that allow code?

I've been on many, many "frequencies" that didn't require
radiotelegraphy, either in use or to obtain a license to
operate. Got one of those licenses in 1956.

>Pass a code test. It's not rocket science.

It's unnecessary and certainly NOT a "science." :-)

The only agency in the USA that grants amateur radio
licenses is the FCC and they don't think the code test
proves anything to them insofar as granting any amateur
radio license.

>Why should that matter to the FCC?

Ahem, the FCC is the ONLY agency that grants amateur radio
licenses in the USA.

>As I said, you're not
>qualified to discuss something you have absolutely no understanding of
>- let alone make decisions about it for others.

Klein, you are now violating the general to-be rules of
moderation.

Jim-"Opus" is a Canadian. He is licensed under the jurisdiction
of Industry Canada, NOT the FCC. That is his ONLY "qualification
for exemption" in any discussions about what the FCC does or may
do.

YOU, on the other hand, NOT being IN the FCC, cannot legally
"make decisions about (the code test) it for others." That
decision is up the FCC.

What YOU seem to want to do is force everyone current and
future to take that code test...because you had to take a
code test...and you want to "get even." :-)

>You can use your voice on voice bands - called CB.

Incorrect. There is the Maritime Radio Service. There is the Aeronautical Radio Service. There is the Private Land Mobile Radio Service. There is the little Citizens Band Radio Service. All have bands below 30 MHz and all allow voice. [I've been on all of them] It isn't restricted to just CB.

>That's what CB is
>for - communications for those who don't want to pass a ham test
>(which includes CW). Like you.

Now, now, lets not get testy there old timer. Citizens Band Radio Service was established in the USA in 1958, 46 years ago...as a general-purpose, short-range communications band that would suit the general citizenry. It required NO test whatsoever back then, still doesn't require any test. CB has changed, enlarged in the following 46 years and the number of users outnumber all licensed USA radio amateurs by at least 4:1. [with no licensing for decades, only gross numbers of unsers are possible through sales records such as EIA reports]

I believe that Canada has their own CB. Many countries do. That is irrelevant to the retention or elimination to the radiotelegraphy test for USA radio amateurs.

Now be nice and behave in here or the moderator team to be might make you sit in the corner.

Shalom,

LenAnderson@ieee.org

Nonsense. ALL cats (especially domesticated ones) have POOR
vision. They are scent-oriented.

If you've had cats at all you would realize this.

Now why are you gabbling about biological subjects in an amateur
radio policy newsgroup?

>> But tell bees that their dancing is just raw data. Then translate a
>> bee dance for me, blind man.

Now why are you gabbling about biological subjects in an amateur
radio policy newsgroup?

Did you get stung while exiting a cat house?

Be nice Klein or the moderator team to be may make you sit in
the corner.

When will CB have the same power and range as ham radio? When it does,
I'll go back.

CB is dead, quit using the term "CB" like an insult. It is short range
and therefore not a comparison.

Try to keep up. I have been quite consistent. You have not being
paying attention. I made no argument against voice at all. I made the
argument that a live voice conveys more than just words. Again, try to
keep up.

Are we on the radio right now? Your apples and oranges arguments are
getting tiresome. Here in Usenet, the text is preserved. CW is not.
Text on usenet is easily saved for future consideration. Is CW saved
on a radio server for others to listen to and reply to at their
leisure?

>> Didn't say that it was a bad thing,

>Right?

Don't be so obtuse. I NEVER said that I would get the proper
information. I said "SOME" information..look above. If I understood
Ukrainian then I would get the full message. If she spoke the same
words in monotone English then I would not likely grasp the degree of
anger at what I had or had not done.

>I can convey as much emotion in CW as your grandmother could in
>Ukrainian. You don't understand CW, so you can't understand how that

Can you say the same words 10 different ways on CW? Let me guess, you
beep harder when you are agitated.

>My job is like describing the difference between red-orange and
>orange-red to someone who's been blind from birth. "Red-orange is
>redder than orange-red." "But ..." No buts - it is. Someone who's
>never seen just can't understand.

Not a good analogy. I can still hear the CW. I just don't know the
meaning. Your analogy is more like trying to describe CW to a deaf
person.

>>>> Usent is text, by the way, not visual.
>
>>>I'll have to start using my ears to read your posts, then.
>
>>Raw data [text] is all that's needed for this conversation.
>

>Raw data is all that's available for communication.

With CW, yes. Raw data plus inflection conveys a fuller conversation.

>>You insist on reducing the term "communication" to just an exchange of
>>data. I am trying to point out that there is MUCH more to human
>>interactions than just data.
>
>There's much more to human interaction than lexical communications,
>yes - but we're talking about lexical communications here, so anything
>else is totally irrelevant. You can't have any more than lexical
>communication by radio.

Oh bull! You get less than you can in person, true, but much more with
an angry or happy voice than with code.

>But tell bees that their dancing is just raw data. Then translate a
>bee dance for me, blind man.

This is relevant how?

Vocal communication is never just a conveyance of information but you
insist that's all that ham radio is.

Funny. I haven't followed this thread, but "Opus" would be a screen
name that Jim would choose. I'll have to go read this "Opus" character.

I wouldn't worry about that too much. just be careful of some of the advice dispensed around here though....

>
> When listening to CW on my scanner, are there any tell-tale indications

> a higher class of license and increased privileges?

well, Dyslexia often affects the interconnection of the visual processing centers with that of visual pattern recognition. I know, I have that problem myself.

Since this problem appears to be one in the visual side of the system, it stands to reason that sound would not be affected in the same way (nor would touch - in my case, braille is far easier for me to read than the printed word was). CW is much the same way for me. I picked it up as a teen, but never did get around to using it, nor did I bother with it when I went in to take my first Amateur radio exame.

you may note how well I type. Actually, its an automatic spell checker correcting some of the "dyslexic typing" my fingers turn out. There are some word variations that still get past the spellcheck though. :(

point is, since CW is a sound language, it might be loads easier for her to learn than say the printed word.

Not if you use a big linear amplifier and that's a BIG 10-4

> More to the point, are there more licensed amateurs since the code requirement
> was removed years ago?

Yes. In the USA at least.

Since the inception of the no-code Technician class here in 1991,
the growth of the Technician class license numbers in the USA
has been continuous. Those now comprise about 49 % of ALL
licensees. The Technician class license numbers are twice that
of General class, the next-largest license class.

Since the "reconstruction" in FCC amateur radio regulations of
2001, the number of licensees grew to peak in July, 2003. At
that time the maximum code test rate was fixed at 5 WPM, all
classes.

A problem now is the attrition of the older licensees. More old-
timers are leaving/expiring (their licenses) than are being
replaced by new (never before licensed in amateur radio)
licensees. Source: www.hamdata.com. That trend has
persisted for three years.

The code test is not THE factor causing it, just one of the
major factors in slowing the increase of new licensees.
Coupled with the stubborn resistance to change of ANY
regulations by olde-tymers, there is little incentive to enter
olde-tyme amateur radio. Ally that with the huge growth of
the Internet in the 15 years it has been public - an Internet
that has spread worldwide with near-instant communications
over that world - and the traditional standards and practices
of olde-tyme ham radio just don't have the appeal to
newcomers they once had.

Elimination of the code test for any license will cause a spurt in new licensees. While such elimination is not a guarantee to far-future growth, it will be the significant act to being CHANGING regulations to better fit the modern times. Keeping up with changing times is a NECESSITY in regulations, regardless of the personal desires of the minority of amateurs making up the olde-tyme group.

<snip much childish ranting and issue avoiding>

You and your ilk have done nothing but hurl big baby childish insults
and laughable innuendo.

Trolls like you are fun to play with but get boring real fast. You're
not even a good troll. Lets check the meter:

```
____________
|0\|||||||10|
| \ |
| \ |
| \ |
| \ |
|_____*______|
Troll-O-Meter
```

Not even worthy of a small flame.

sigh what even happened to the good trolls from the days of yore?

Shouldn't you be hiding under a bridge somewhere stealing children?

Don't you have some offs to fuck?

Time for an oldie but a goodie:

You know what? You're clueless, son! Completely clueless!
You wouldn't have a clue if somebody *faxed* it to you.
You couldn't catch a clue if you stripped naked and soaked your pallid
hide in clue musk, then did the clue mating dance in a field full of
horny clues during the height of clue mating season!

What meaning do you expect your delusional self-important statements
of unknowing, inexperienced opinion to have with us? What fantasy do
you hold that you would believe that your tiny-fisted tantrums would
have more weight than that of a leprous desert rat, spinning rabidly
in a circle, waiting for the bite of the snake?

I cannot believe how incredibly stupid you are. I mean rock-hard
stupid. Dehydrated-rock-hard stupid. Stupid so stupid that it goes
way beyond the stupid we know into a whole different dimension of
stupid. You are trans-stupid stupid. Meta-stupid. Stupid collapsed
on itself so far that even the neutrons have collapsed. Stupid gotten

so dense that no intellect can escape. Singularity stupid. Blazing hot mid-day sun on Mercury stupid. You emit more stupid in one second than our entire galaxy emits in a year. Quasar stupid. Your writing has to be a troll. Nothing in our universe can really be this stupid. Perhaps this is some primordial fragment from the original big bang of stupid. Some pure essence of a stupid so uncontaminated by anything else as to be beyond the laws of physics that we know. I'm sorry. I can't go on. This is an epiphany of stupid for me.

Welcome to the killfile. Go ahead and rant and rave about how you don't care that I killfiled you.

You claimed that we humans communicate visually more than by words.
You're contradicting yourself here.

When you blather on about something you know nothing about you lose
track of what you said a few days ago.

>>Deaf-blind dogs and cats don't normally walk around the streets
>>without aid. (Domesticated cats, btw, aren't scent-oriented, they're
>>vision-oriented.)

>Never had a cat, did you?

She's 7 years old now, and sleeping on my bed. Got her when her
mother died - she was still nursing - so, yes, I currently have a cat.
Have had some canine or feline pet since before I can remember -
usually more than 1.

> I grew up with them. They don't depend on
>smell near as much as dogs but they depend on it just the same.

They use it - about as much as we do - they don't depend on it.

>Are we on the radio right now? Your apples and oranges arguments are
>getting tiresome. Here in Usenet, the text is preserved. CW is not.

You're arguing for the visual now? Voice conveys more than CW, which
is your argument against CW. Voice conveys more than Usenet, which
ISN'T an argument against Usenet.

So which is it? Is the fact that voice conveys more than X an
argument against X or not?

I'm getting tired of your "I have to argue just so that I can win"
stance, so figure out how to get back to me when you grow up.

The 30 Steps below will help all No-Code Hams, it will also help you to find others just like yourself. These 30 steps should also be added to the present writtens.

Step One: Use as many "Q" signals as possible. Yes, I know they were invented solely for CW and are totally inappropriate for two meter FM, but they are fun and entertaining. They keep people guessing as to what you really meant. I.E. "I'm going to QSY to the phone." Can you really change frequencies to the phone? QSL used to mean, "I am acknowledging receipt", but now it appears to mean, "yes" or "OK". I guess I missed it when the ARRL changed the meaning. It is also best to use "OK" and "QSL" together. Redundancy is the better part of Lid-dom.

Step Two: Never laugh when you can say "HI HI". No one will ever know you aren't a long time CW rag-chewer if you don't tell them. They'll think you've been on since the days of Marconi.

Step Three: Utilize an alternative vocabulary. Use words like "destinated" and "negatory". It's OK to make up your own words here. I.E. "Yeah Tom, I "pheelbart zaphonix" occasionally myself."

Step Four: Always say "XX4XXX" (Insert your own call) "for I.D." As mentioned in Step One, anything that creates redundancy is always encouraged. That's why we have the Department of Redundancy Department. (Please note that you can follow your call with "for identification purposes" instead of "for I.D." While taking longer to say, it is worth more "LID points".

Step Five: The better the copy on two meter FM, the more you should use phonetics. Names should be especially used if they are short or common ones. I.E. "My name is Al... Alpha Lima" or "Jack.. Juliet Alpha Charlie Kilo." If at all possible use the less common HF phonetics "A4SM... America, Number Four, Sugar Mexico." And for maximum "LID points", make up unintelligible phonetics. "My name is Bob... Billibong Oregano Bumperpool."

Step Six: Always give the calls of yourself and everyone who is (or has been) in the group, whether they are still there or not. While this has been unnecessary for years, it is still a great memory test. You may also use "and the group" if you are an "old timer" or just have a bad memory. Extra points for saying everyone's call and then clearing in a silly way "K2PKK, Chow, Chow."

Step Seven: Whenever possible, use the wrong terminology. It keeps people guessing. Use "modulation" when you mean "deviation", and vice-versa.

Step Eight: If someone asks for a break, always finish your turn, taking as long as possible before turning it over. Whenever possible, pass it around a few times first. This will discourage the breaker, and if it is an emergency, encourage him to switch to another repeater and not bother you.

Step Nine: Always ask involved questions of the person who is trying to sign out. Never let him get by with just a "yes" or "no" answer. Make it a question that will take him a long time to answer.

Step Ten: The less you know on a subject, the more you should speculate about it in the roundtable. Also the amount of time you spend on the subject should be inversely proportionate to your knowledge of the subject even though you have no damn clue.

Step Eleven: Always make sure you try to communicate with only a handheld and a rubber duck antenna. Also, make sure you work through a repeater that you can hear very well, but it cannot hear you. This will put out a kind of "LID mating call": "Well, Joe, I can hear the repeater just fine here. I wonder why it can't hear me?" You will score maximum LID points if you are mobile, and with the radio lying in the passenger seat.

Step Twelve: If you hear two amateurs start a conversation, wait until they are twenty seconds into their contact, and then break in to make a call, or better yet to use the auto-patch. Make sure you keep the repeater tied up for at least three minutes. This way, once the two have re-established contact, they won't even remember what they were talking about.

Step Thirteen: You hear someone on the repeater giving directions to a visiting amateur. Even if the directions are good, make sure you break in with your own "alternate route but better way to get there" version. This is most effective with several other "would-be LIDs", each giving a different route. By the time the visiting amateur unscrambles all the street names whizzing by in his mind, he should have moved out of the range of the repeater. This keeps you from having to stick around to help the guy get back out of town, later.

Step Fourteen: If an annoying station is bothering you, make sure your other "LID" buddies have a "coded" frequency list. Even though "CODES" are strictly forbidden on Amateur Radio, it's really neat to practice "James Bond" tactics.

Step Fifteen: Always use the National Calling Frequency for general conversations. The more uninteresting, the longer you should use it. Extra points are awarded if you have recently move from an adjacent frequency for no reason. Make sure when DX is "rolling" in on 52.525 that you hang out there and talk to your friends five miles down the road about the good old CB days!

Step Sixteen: Make sure that if you have a personal problem with someone, you should voice your opinion in a public forum, especially a net. Make sure you give their name, call, and any other identifying remarks. For maximum points, make sure the person in question is not on the repeater,

or not available.

Step Seventeen: Make sure you say the first few words of each transmission twice, especially if it is the same thing each time. Like "roger, roger" or "fine business, fine business". I cannot stress enough about encouraging redundancy.

Step Eighteen: If you hear a conversation on a local repeater, break in and ask how each station is receiving you. Of course they will only see the signal of the repeater you are using, but it's that magic moment when you can find a fellow "LID", and get the report. Extra points are awarded if you are using a base station, and the repeater is less than twenty-five air miles from you.

Step Nineteen: Use the repeater for an hour or two at a time, preventing others from using it. Better yet, do it on a daily basis. Your quest is to make people so sick of hearing your voice every time they turn on their radio, they'll move to another frequency. This way you'll lighten the load on the repeater, leaving even more time for you to talk on it.

Step Twenty: See just how much flutter you can generate by operating at handheld power levels too far away from the repeater. Engage people in conversations when you know they wont be able to copy half of what your saying. Even when they say your uncopyable, continue to string them along by making further transmissions. See just how frustrated you can make the other amateur before he finally signs off in disgust.

Step Twenty One: Use lots of radio jargon. After all, it makes you feel important using words ordinary people don't say. Who cares if it makes you sound like you just fell off Channel 19 on the citizen's Band? Use phrases such as "Roger on that", "10-4", "I'm on the side", "Your making the trip" and "Negatory on that".

Step Twenty Two: Use excessive microphone gain. See just how loud you can make your audio. Make sure the audio gain is so high that other amateurs can hear any bugs crawling on your floor. If mobile, make sure the wind noise is loud enough that others have to strain to pick your words out from all the racket.

Step Twenty Three: Start every transmission with the word "Roger" or "QSL". Sure, you don't need to acknowledge that you received the other transmission in full. After all, you would simply ask for a repeat if you missed something. But consider it your gift to the other amateur to give him solace every few seconds that his transmissions are being received.

Step Twenty Four: When looking for a contact on a repeater, always say your "listening" or "monitoring" multiple times. I've always found that at least a half dozen times or so is good. Repeating your multiple "listening" ID's every 10 to 15 seconds is even better. Those people who didn't want to talk to you will eventually call you, hoping you'll go away after you have finally made a contact.

Step Twenty Five: Always use a repeater, even if you can work the other station easily on simplex ... especially if you can make the contact on simplex. The coverage of the repeater you use should be inversely proportional to your distance from the other station.

Step Twenty Six: When on repeaters using courtesy tones, you should always say "over". Courtesy tones are designed to let everyone know when you have unkeyed but don't let that stop you. Say "over", "back to you" or "go ahead". It serves no useful purpose but don't worry, it's still fun!

Step Twenty Seven: Use the repeater's autopatch for frivolous routine calls... especially during morning or evening commute times. While pulling into the neighborhood, call home to let them know you'll be there in two minutes.... or, call your spouse to complain about the bad day you had at work. After all, the club has "measured rate" service on their phone line so they get charged for each autopatch call. Your endeavor is to make so many patches in a year that you cost the club at least $20 in phone bills. That way you'll feel you got your money's worth for your dues!

Step Twenty Eight: Never say "My name is ....." It makes you sound human. If at all possible, use one of the following phrases: a) "The personal here is ..." b) "The handle here is..."

Step Twenty Nine: Use "73" and "88" incorrectly. Both are already considered plural, but add a "s" to the end anyway. Say "73's" or "88's". Who cares if it means "best regards" and "love and kisses." Better yet, say "seventy thirds"! (By the way, seventy thirds equals about 23.3).

Step Thirty: If the repeater is off the air for service, complain about the fact that it was off the air as soon as it's turned back on. Act as though your entire day has been ruined because the repeater wasn't available when you wanted to use it. Even thought you have never paid a penny to help out with the upkeep of it.

>
>>Try to keep up.
>
>That's actually good - if you can't defend, attack. Even if your
>attack is nonsense.

Asking you to keep up is not an attack. Telling me to grow up
certainly is and you have done that several times.

>> I have been quite consistent. You have not being
>>paying attention. I made no argument against voice at all. I made the
>>argument that a live voice conveys more than just words.
>
>You claimed that we humans communicate visually more than by words.
>You're contradicting yourself here.

This shows that you have not kept up. I did not say that we
communicate visually more, I said that we are get the most
information from our environment visually than by any other sense. Our
other senses help us much less than they do for most other higher
animals.

>When you blather on about something you know nothing about you lose
>track of what you said a few days ago.

Yet again you attack.

>>>Deaf-blind dogs and cats don't normally walk around the streets
>>>without aid. (Domesticated cats, btw, aren't scent-oriented, they're
>>>vision-oriented.)
>
>>Never had a cat, did you?
>
>She's 7 years old now, and sleeping on my bed. Got her when her
>mother died - she was still nursing - so, yes, I currently have a cat.
>Have had some canine or feline pet since before I can remember -
>usually more than 1.
>
>> I grew up with them. They don't depend on
>>smell near as much as dogs but they depend on it just the same.
>

>They use it - about as much as we do - they don't depend on it.

Each olfactory cell in a cat has about 40 cilia while a human cell has only about 6 to 8. A cat has approximately 60 to 80 million olfactory cells while a human has about 5 to 20 million. Dogs put us all to shame.

>>Are we on the radio right now? Your apples and oranges arguments are
>>getting tiresome. Here in Usenet, the text is preserved. CW is not.
>
>You're arguing for the visual now? Voice conveys more than CW, which
>is your argument against CW. Voice conveys more than Usenet, which
>ISN'T an argument against Usenet.

How many times do I have to tell you that I am not arguing against CW? It has it's place but I am arguing against CW as a requirement for full access to ARS. I ask what is so great about CW and all I seem to get is a rather patronizing "You wouldn't understand".

>So which is it? Is the fact that voice conveys more than X an
>argument against X or not?

This again shows how you have not been keeping up. Not an attack, an observation.

>I'm getting tired of your "I have to argue just so that I can win"
>stance, so figure out how to get back to me when you grow up.

Explain how I have to "grow up" and, while you are at it, explain how you are qualified to make such a statement. You have insulted me in such a manner several times yet I have said nothing of the sort to you. You patronize me while I give legitimate arguments. You don't like my arguments and try to deflect by misquoting.

Of all the pro-coders here, I had the most respect for your view. I didn't agree but at least you made a point without the typical insults of others here. Now you seem to be joining their ilk.

Sad.

He's more than out of business; and copyrights are good for 70 years beyond
a person's expiration date, so no, "it's [not] public domain by now." Come
back in 66-1/2 years. I'm sure someone would be willing to post it then.

> 30 years ago (the "IBM PC" debuted in 1980, 26 years ago).
> The Internet went public in 1991, 15 years ago.

Basically true, but that's not the whole story by any means.

Until rather recently, personal computers were rather expensive. The IBM PC (introduced in August 1981) cost over $1500 in its basic configuration - which works out to about $3500 in 2006 dollars for a machine with very limited capabilities.

As recently as 10 years ago, a complete PC system with reasonable performance cost over $2000 - and its depreciation curve was very steep.

"The internet" was originally rather limited and not simple to access for the non-technically minded. That's all changed now.

On top of all this is the evolution of the PC from an expensive techno-toy to an everyday tool in most workplaces, schools, and homes. "Computer literacy" is now *expected* in most jobs.

The synergy of low cost, easy-to-use computers, easy and fast online access, and a reasonably computer-literate public has only come together within the past 10 years.

> "Restructuring" to drop the morse test rate to 5 WPM
> for all such tests happened only 6 years ago.

In that time, the number of US amateurs has actually dropped by over 17,000.

> The peak licensing of 737,938 happened on 2 Jul 03, just
> 3 years ago. [they've been dropping at an average of 7K

> per year ever since]

It should be noted that the number 737,938 includes not only those licenses which were current at the time, but also those which were expired but in the 2 year grace period. The number of then-current licenses was about 50,000 lower.

It's an echo?

> Having been IN radio-
> electronics for over a half century, I DO know some
> "technical people." :-)

But you have never been "IN" amateur radio, Len.

> Manual radiotelegraphy was a MUST to use early radio
> as a communications medium. The technology of early
> radio was primitive, simple, and not yet developed.
> On-off keying was the ONLY practical way to make it
> possible to communicate.

Yet some pioneers (like Reginald Fessenden) were using voice communication as early as 1900, and had practical lomg-distance radiotelephony by 1906. AM broadcasting was a reality by 1920.

> Morse code was then already
> mature and a new branch of communications was open
> to use by downsized landline telegraphers.

While some radio operators came from the ranks of landline telegraph operators, most did not, as it was predominantly young men who pioneered radio in the early part of the 20th century. The Morse Code used on landlines was "American" Morse, while that used on radio after 1906 was predominantly "International" or "Continental" Morse.

> > They simply view the whole service as outmoded in the
> >face of modern telecommunications.
>
> PART of that IS true. NOT all of it.

What part is not?

> What IS outmoded (technically) is sitting only on HF
> and "working" other stations with morse radiotelegraphy.

Why is that "outmoded"? What has replaced it?

> Amateur radio is the ONLY radio service still using
> morse radiotelegraphy for communications purposes.

So what? Amateurs choose the mode they want to use. What is wrong with choosing Morse Code and HF operation?

Some may say the Morse Code *test* is outmoded. But you are saying the *use* of Morse Code is outmoded!

FM broadcasting is the only radio service that uses stereo multiplex FM - is it outmoded?
>
> Another thing outmoded is the strict "necessity" to use
> a formalism in "procedure" AS IF it was "professional"
> radio. That formalism was established between 50 to 70
> years ago.

What "formalism" do you mean, Len?

The use of call signs? Signal reports? Using only first names?

Amateur radio is among the least formal radio services I know.

How would you have amateurs operate?

> Amateur radio, by definition, is NOT
> professional.

So what's the problem with a standard procedures?

> Too many olde-tymers want to PRETEND
> they are pros in front of their ham rigs.

Not true, Len. We're amateurs - but that doesn't mean we have no standards and no procedures. The use of standard procedures makes it more fun and easier on everyone involved.

> But, there is still an enormous area of the EM spectrum
> that is still open for experimentation, for just the fun
> of doing something out of the ordinary above 30 MHz.
> That can be a very different RF environment, much much
> different than the technology available in the 20s and
> 30s.

And a license to use a good chunk of that spectrum has been available without a Morse Code test for more than 15 years. But you have not taken advanatage of it.

> It has exciting possibilities...except for the
> rutted and mired olde-tymers unable to keep up with new
> things, secure in their own dreams of youth and simple
> technological environment.

Do you have a problem with youth, Len? Or simplicity?

> >Let's face it.. the romance is gone.
>

Who pioneered the use of the HF spectrum, Len?

Who first established two-way HF radio contact?

> DONE a long time ago. The solid-state
> era came into being about 45 years ago and has
> revolutionized ALL electronics (radio is a subset of that).

The transistor was invented in 1948 - 58 years ago. Amateurs were using
them in receivers and transmitters by the late 1950s.

> Except as memorabilia trinkets of the past, GONE is the
> analog VFO,

Not really.

> GONE is the one-tube regenerative receiver,
> GONE is the single-crystal-single-frequency Tx, GONE is
> the big, bulky AM modulator amplifier,

Well, those things are not common, but they're still around.

> GONE is the not-
> knowing-when-the-bands-are-open (solar activity and
> ionosonding solved that and HF MUF is a predictable
> item that can be found by a computer program).

Yet the predictions are not always correct. Openings happen when no
opening is predicted, and predicted openings do not always happen.

> Except
> for the boatanchor afficionados, vacuum tubes are GONE
> for nearly everything but high-power transmitters.

And high-end audio...

So what? Those things are only one part of amateur radio. There's a lot
more.
>
> The radio world of today is NOT that of 1950, nor of
> 1960, nor 1970, nor even 1980s. It keeps changing,
> advancing, the state of the art never static.

Of course not. That doesn't mean old things are all bad.

> For the
> stuck-in-the-mud olde tymers that is terrible...they
> feel insecure on not being able to keep up, become
> aggressive to newcomers ("no kids, lids or space

> cadets") and retreat to the "secure" mode of their
> youth, "CW."

The phrase was "no kids, no lids, no space cadets, Class A operators only". It was used by a now-dead radio amateur who had the callsign W2OY. He did not use CW - he was an AM-only operator of the 1950s and 1960s.

The phrase is remembered because it was so unusual.

"CW" (aka Morse Code) is popular with many radio amateurs, not just "old timers".

> But, they want to make sure They get
> the respect they feel they've "earned" (as if) so
> they try and try and try to bring all down to THEIR
> level...the code test MUST stay..."because."

Is there something wrong with the *use* of Morse Code, Len?

> There are 100 million two-way radios in use in the USA
> alone, millions more in other countries. Those are the
> cellular telephones.

Actually that number is probably low, considering how many more go into use every day.

> There are millions of VHF and UHF
> transceivers in the USA, working daily for public
> safety agencies, ships, private boats, air carriers as
> well as private airplanes.

Millions?

> There are tens of thousands
> of HF transceivers in use in the USA, users being
> everyone from government agencies to private boat
> owners, ALL exclusive of amateur radio users.

Amateur radio *operators*.

And there lies the difference: Almost all other radio services require the use of only certified, channelized, no-user-adjustments-possible equipment. Most of those "millions" or transceivers cited are very low power and use only a single mode and a few channels. The user has almost no real control over the operation of the radio. This is most true in the case of the cell phone/

> Where is
> the "romance" in all this Plenty from a cornucopia that
> all have grabbed? It is GONE, yes.

Maybe for you, Len. Not for hundreds of thousands of radio amateurs.

>
> But, NEW "romances" await. DIFFERENT ones, I'd say a

In other words, Len, you want to tell us what we should like and what we should not like. What we should enjoy and what we should not enjoy.

What is wrong with live and let live?

5148. Here is how we can end all the silly antenna questions on the repeaters and on usenet.

Newsgroup: rec.radio.scanner
Date: 2006-10-04 00:17:24 UTC
From: Slow Code <my.mail@no.spam>

If we raise the CW speed to 20 WPM for all classes including the Tech class, hams will tend to study the theory more while they build up their code skill and they will understand the theory better and won't need to ask silly questions. So increasing the speed requirement will get us better & smarter hams.

Lazy people that don't want to learn anything will stay on CB and die in shoot-outs with each other in shopping mall parking lots which will help clean up the CB band. To me it looks like a Win Win situation. What do you think?

SC

Well,
I actually did buy it. It came with the package for the kit.
So, I reckon I do have a license, just can't find a reciept. But that
doesn't seem to matter as all references to Mr. Cheeks on the web lead
to errors

So, does anyone have a copy they could send?

Great! Let's increase the CW requirement to something that
you cannot copy and improve amateur radio by an infinite
amount.

PCR Remote - version 0.6.30 Beta is Now Available for downloading from the homepage:
http://members.cox.net/5150soft/PcrRemote/PcrRemote.html

The Server and Remote software allows you to control your Icom PCR-100, PCR-1000, PCR-1500 and PCR-2500 over the internet.
Using Audio Brodcast software such as SHOUTcast, Pirate Radio Broadcaster or Windows Media Encoder will enable you to hear your radio from a remote location over the internet...

Updates:
Aug 07,2006 - Fixed: BandScope Display.
Aug 20,2006 - Added: 10 Selectable Banks.
Sept 05,2006 - -----: Increased Channels to 150 Per Bank.
Oct 03,2006 - -----: Removed PCR Selection, Now Automatic.
Oct 03,2006 - -----: Changed 3 Khz Filter to 2.8 Khz (Actual Filter).
Version 0.6.030 Released 10/03/2006

Regards,
Jay

>win 98 an Think its a PI

You need to boot into DOS, and run RSS from there. You can probably
run from a DOS window when creating the configuration, but you have to
run from native DOS when reading/writing the radio.

I think the HT1000 (and other Jedi family radios) are fast enough that
processer speed is not a issue, but the older radios needded to be
programmed using a 486-33.. Faster machines would't work, as the radio
couldn't accept the data that fast. (the speed that the PC talks to
the radio is/was based on the processer speed of the PC, and not a
standard port speed. IIRC.. braindead, but that's /\/\ for you.)

>
>Basically true, but that's not the whole story by any means.

I wrote a chronological synopsis. If you need more
material, you can crib from Robert X. Cringely and/or
dozens of others.

If you need a "whole story" then WRITE one and get it
published. You are the self-styled knowitall "expert"
who tells everyone else what to write correctly and
not correctly, what to like and not like. You know
everything, yes? Of course you do...you are a code-
tested amateur extra.

>Until rather recently, personal computers were rather expensive.

Define "recently." The prices for complete personal
computer systems, components have been constantly
dropping since the beginning of 1982.

Five years ago a complete PC sold for $500 plus tax
at Lowes near Gig Harbor, Washington. Hewlett-Packard
brand no less! :-)

Complete PCs - and laptop portables - can be purchased
today at Fry's on the west coast for $500; go to
www.outpost.com to see their mail-order products.

>The
>IBM PC (introduced in August 1981) cost over $1500 in its basic
>configuration - which works out to about $3500 in 2006 dollars for a
>machine with very limited capabilities.

The IBM representative showing off their PC at Rocketdyne
in early 1982 was NOT taking orders in "2006 dollars."
The Treasury Departement would have arrested both reps
and IBM Corporation had they done so.

"Limited capabilities?" Only by today's standard. In the early 1980s the first IBM PCs were the EQUAL in power of any 16-bit minicomputer then on the market. Try to keep your time frame focussed. And cite your hands-on experience with either designing, building, or using minicomputers for a comparison. Feel free to indulge everyone on your 64-bit mainframe computer expertise.

>As recently as 10 years ago, a complete PC system with reasonable
>performance cost over $2000 - and its depreciation curve was very
>steep.

You did not do any "dumpster diving" for parts to build your own PC? Why not? Can't you build a functional IBM PC clone for just $100 in parts? Do you think you need morse code skills to program computer code?

I know a few folks who have built whole new PC-compatible computers for LESS than $250 in parts cost. Three years ago.

>"The internet" was originally rather limited and not simple to access
>for the non-technically minded. That's all changed now.

Neither the Internet ("world wide web") nor commands for browsers accessing the Internet have changed in 15 years.

Define "technically minded." Did PC users need university degrees to access the world wide web? I don't think so.

>On top of all this is the evolution of the PC from an expensive
>techno-toy to an everyday tool in most workplaces, schools, and homes.
>"Computer literacy" is now *expected* in most jobs.

Jailhouse guards, housewives, nannies don't need "computer literacy." They can all be amateur radio licensees, though.

>The synergy of low cost, easy-to-use computers, easy and fast online
>access, and a reasonably computer-literate public has only come
>together within the past 10 years.

Yawn. Robert X. Cringely you are NOT. :-)

Why are you trying to tell me what to believe and not believe? Why do you think YOUR "computer history" is "more accurate" than mine? Have you built ANY personal computer from scratch? No? I have. Two of them, in fact. It was fun to do so for me. Why are you trying to tell me what I "should" be having fun with?

You are not a member of the IEEE, a Professional Association. I am a Life Member of the IEEE. Are you or have you ever been a voting member of the ACM (Association for Computing Machinery)? I have. [got the stupid T-shirt "Dragon in a Member" slogan on the front...but it was free...<shrug>]

Why are you always telling me what to like, not like,
enjoy, not enjoy, what to post, what not to post?

What is wrong with live and let live?

>
>So what? Amateurs choose the mode they want to use. What is wrong with
>choosing Morse Code and HF operation?

Now, now, Jimmie, you are assigning some "blame" on a plain
and simple factual statement: "Amateur radio is the ONLY
[US] radio service still using morse radiotelegraphy for
communications purposes."

What I wrote is a plain and simple fact.

You seem to be in denial, unable to accept a plain and simple
fact. Your problem, not mine.

>Some may say the Morse Code *test* is outmoded. But you are saying the
>*use* of Morse Code is outmoded!

Yes, in every other radio service except amateur.

You seem to be in denial, unable to accept a plain and simple
fact. Your problem, not mine.

>FM broadcasting is the only radio service that uses stereo multiplex FM
>- is it outmoded?

There is NO SUCH THING as "stereo multiplex FM" mode.

FM broadcasting is NOT the "only radio service" using stereophonic
audio modulation. Stereophonic audio modulation is NOT required
by FM band broadcasters. Those broadcasters MAY use stereophonic
audio OR they may use monophonic audio plus a SUBCARRIER separate
audio channel OR they may use stereophonic audio PLUS the
subcarrier audio. The term "multiplex" applies to SEPARATE
information sources, not stereophonic audio. All of that is
very much in use today.

DTV (Digital TeleVision) broadcasting carries QUADRAPHONIC audio
(optional, may be monophonic or stereophonic) with or without
extra separate audio subchannels, with or without audio text

("Teletext") accompanying the video. That is very much in use today and for the foreseeable future of American TV broadcasting.

Some AM broadcasters are still using the Motorola C-QUAM system for stereophonic broadcasting where each stereo "channel" takes one of the two DSB sidebands. While that system works well, the AM broadcasting listener market has NOT received it well enough to warrant more than a few broadcasters adopting it or any similar AM stereophonic system. It appears to be on the way out due to listener non-acceptance.

"Shortwave" broadcasting is still "testing" Radio Mondial system which is capable of stereophonic audio transmission. Technically the system works very well. The increased cost of receivers and the general downturn in world interest in "shortwave" broadcasting might result in a future discontinuance. Note: What was once "shortwave" radio broadcasting is increasingly shifting over to satellite relay and VoIP dissemination rather than maintaining the HF transmitters; program content remains the same.

The International Civil Airways VOR (Very high frequency Omnidirectional radio Range) system ground stations ALWAYS broadcast with a subcarrier (9.96 KHz) that is FMed with the reference magnetic azimuth bearing phase. The RF output is amplitude modulated with 30% AM so that any receiver can determine its magnetic bearing to the ground station by comparing the demodulated reference phase with the main AM phase. Relatively simple receiver demod that was devised in vacuum tube architecture times. In use since 1955 worldwide, no foreseeable discontinuance in the future despite wider use of GPS.

Multi-channel (many "multis") using FM was once the choice of trans-continental microwave radio relay, the linkage across the USA that made national TV and 'dial-anywhere' long distance telephony possible. It has been largely replaced by optical fiber relay using digital multiplexing of voice and TV channels using digital modulation of laser light. The longest (to date) fiber-optic relay is the long, long like between London and Tokyo through the Mediterranean Sea past Saudi Arabia, India, around southeast Asia, past the Phillippines. Most of it under water. Optical "pumping" with a second optical wave-length is used for amplification to avoid electronic repeater amplifiers. Such optical pumping (amplification) is not possible with microwave RF radio relay.

There are many different other examples of "FM"-like modulations at work daily in HF and on up into the micro-waves. The most common is the various adaptations of the common dial-up modem using combinatorial amplitude and

phase modulation of an audio carrier wave. Those are the "TORs" (Teleprinter Over Radio) used for data communications in maritime service; voice is done via SSB and may be simultaneous with the data. This is on-going in use and for the foreseeable future.

The FIRST HF Single Sideband circuits (since the beginning of the 1930s) used combinatorial modulations. The 12 KHz bandwidth was composed of four 3 KHz wide separate one-way channels. Each 3 KHz (voice bandwidth) channel could carry up to 6 frequency-shift-modulated teleprinter channels. The common arrangement worldwide (by both commercial and government users) was to use two 3 KHz channels solely for voice/telephony and the remaining two for 8 to 12 TTY circuits (number dependent on the redundancy required to overcome selective fading). While those "commercial" SSB circuits were numerous from the 40s on into the 70s, their number has dwindled due to better throughput and reliability from satellite radio relay services.

Was there anything else technical about communications and/or broadcasting that you wanted to erroneously state?

Lenny knows a lot about cats. When he was a kid he hated playing
in the sandbox because the cats kept trying to cover him up.

And half a century ago those VHF/UHF hams had passed a code test. They
weren't no-coders, they were motivated and did what it took. Today's
no-codes aren't motivated and don't want to make an effort, therefore
they're probably not going to be motivated to move things forward either.

Do you have any idea how really stupid you sound? You keep on
repeating this "dumbing down" mantra like it actually means something.
Newsflash. Ham radio and CB are really only different in the range
available. Ham is just CB that goes further and there is nothing you
can do to change that.

And, for the 15'th time, the no-code test here in Canada is TOUGHER
than the code test.

>Or

I have no idea what you mean. What do we get handed to us? I'd like to know because myself and everybody I know has had to work for everything we own.

Please explain what I get handed to me, oh great professor of Canadian studies. Canadian is spelled with a "C" by the way. Don't they educate you down there?

Canadian no-code radio amateurs have to pass with a HIGHER grade than
code amateurs.

Can you please explain what my handouts are? Because I seem to have
missed them all. I still have to work to pay my rent, pay all my
utilities, pay for the fuel in my vehicles...fuel that is MORE
expensive here than down south....etc.

And an F.Y.I, Canada is the LARGEST supplier of crude oil to the
United States and YOU guys can buy OUR petroleum products CHEAPER than
we can here. Nice handout you're getting there, lazy ass.

Actually..I DID get a free education at a public school. I get it
now..you are jealous because you didn't get any kind of education, as
observed by your misspelling of *C*anada and your other mindless
rantings.

You have my sympathy but it's not too late to get an education.

You seem pretty knowledgeable so I need some assistance at
understanding something.

What I can't understand is the the incredibly childish attitude of
some of the pro-coders here. For me, the confusion stems from having
known several old timer hams while growing up. I looked up to them.
They were older gentlemen that had some fascinating knowledge and
great stories to tell about their ham radio hobby. This was back in
the 60's and early 70's so they are all gone now.

I am sure now that they are spinning in their graves, after the spew
puked up by some of the pro-coders.

Not all of them, to be fair, but a few loud ones stand out.

I still can't figure out how a statement about how CW is just beeps[
as opposed to voice on the same hardware] became transmuted into a
requirement that I should hate usenet.
That kind of blatant mis-direction seems to be quite common.

The statement is quite simple...a voice on the airwaves can convey
much more information than just the words spoken but CW can only
convey the words. Since the medium and usually the hardware is exactly
the same weather or not a microphone or a key is used, why bother with
a key that is much more limited? Somehow, this relates to pixels on my
screen but I have yet to understand why my opponent felt the need to
misdirect, misrepresent and misquote. Can none of the pro-coders make
a valid point?

Why do some of them feel that insulting my daughter will make their
point valid? Are their points so weak that they resort to vulgar
insults instead of engaging in debate? I usually don't killfile people
but I have made a few exceptions lately.

Now, there will be some spew directed towards my post. They can go
ahead and prove that turning ham into CB will most certainly be a
great improvement to the ARS. I NEVER knew anybody on CB that was as
rude and vulgar as some of the pro-coders here. I can have a nasty
mouth too, at times, but it's always in response to stupidity that is
obviously not to be taken seriously.

And, ironically, *I* am the one told to grow up. That's just too
funny.

Actually, the Technician License was offered with
reduced code requirements for hams who were more
interested in technical experimentation than in
ragchewing.

No smiley here?

> "Limited capabilities?" Only by today's standard.

That's not correct. The 1981 PC had limited capabilities compared to
the XT available not too long afterward. Both had limited capabilities
in terms of processor speed, memory and storage compared to the PC's of
the early 1990's.

> In the
> early 1980s the first IBM PCs were the EQUAL in power of
> any 16-bit minicomputer then on the market. Try to keep
> your time frame focussed.

Were there things that the IBM couldn't do at that point, Len?
If not, why were so many folks designing, building and selling systems
to allow those early PC's to network with minicomputers?

> And cite your hands-on
> experience with either designing, building, or using
> minicomputers for a comparison. Feel free to indulge
> everyone on your 64-bit mainframe computer expertise.

There's a big difference between designing or building and using
minicomputers. I've never designed or built any minicomputer but I have
plenty of experience in using and working as systems manager on Wang VS
systems. Now what?

>> As recently as 10 years ago, a complete PC system with reasonable

Would you like additional time to rethink your statement?

> ...nor commands for
> browsers accessing the Internet have changed in 15 years.
>
> Define "technically minded." Did PC users need university
> degrees to access the world wide web? I don't think so.

Does everyone who is technically minded need a university degree at any
time, Len?

>> On top of all this is the evolution of the PC from an expensive
>> techno-toy to an everyday tool in most workplaces, schools, and homes.
>> "Computer literacy" is now *expected* in most jobs.
>
> Jailhouse guards, housewives, nannies don't need "computer
> literacy." They can all be amateur radio licensees, though.

That's odd. Our regional jail uses plenty of PC's. I don't know any
nannies but I know plenty of housewives who use PCs. I didn't see
anything incorrect in Jim's statement. Where are you going with yours?

>> The synergy of low cost, easy-to-use computers, easy and fast online
>> access, and a reasonably computer-literate public has only come
>> together within the past 10 years.
>
> Yawn. Robert X. Cringely you are NOT. :-)

If you aren't, did you crib from him without giving credit? :-)

> Why are you trying to tell me what to believe and not
> believe? Why do you think YOUR "computer history" is
> "more accurate" than mine?

Relax, Len. It was probably due to his having had prior experiences
with you.

> Have you built ANY personal
> computer from scratch? No? I have. Two of them, in
> fact. It was fun to do so for me. Why are you trying
> to tell me what I "should" be having fun with?

I'll bet it took you years to solder the parts on those mother boards.
How long did it take you to assemble that hard drive?

Awwwww! I'll bet you meant that you assembled the motherboard into a
case, screwed in the power supply, slid in a drive or two, perhaps added
a CD or DVD burner, plugged in a couple of PCI boards, attached the

monitor, keyboard and mouse and called it a day.

> You are not a member of the IEEE, a Professional Association.
> I am a Life Member of the IEEE.

Yessir. I know about the IEEE Code of Ethics, too. What has all this talk of the IEEE to do with amateur radio? Does anyone need an IEEE member to assemble a computer or use it?

> Are you or have you ever
> been a voting member of the ACM (Association for Computing
> Machinery)? I have. [got the stupid T-shirt "Dragon in a
> Member" slogan on the front...but it was free...<shrug>]

That's great, Len. It looks as if you've found your niche.

> Why are you always telling me what to like, not like,
> enjoy, not enjoy, what to post, what not to post?

I say, if it is computers you like, it is with computers you should stick. Have a blast, Leonard. You can take 'em apart and put 'em back together again. You can impress those with less knowledge than yourself.

> What is wrong with live and let live?

You've been allowed to live.

You left out important information and included a few mistakes. The
information you left out disproves your conclusions.

> If you need a "whole story" then WRITE one and get it
> published. You are the self-styled knowitall "expert"

I've never claimed to be an expert, Len. I do know some things that you
do not know. That seems to really bother you.
> who tells everyone else what to write correctly and
> not correctly, what to like and not like.

I point out some of your mistakes. That's how things go in a newsgroup.

You can have any opinion you want, Len. You can believe the earth is
flat, the moon made of green cheese, that "acceptable" has the letter
"i" in it, or that the IBM PC was introduced in 1980. If you express
such "opinions", it's possible someone else will point out your
mistakes. Your opinion does not make something a fact.

> You know everything, yes?

Oh no, I don't know nearly everything. But I do know some things that
you do not know. That seems to really bother you.

> you are a code-tested amateur extra.

There's no other kind. You aren't even a Novice, though.
>
>
> >Until rather recently, personal computers were rather expensive.
>
> Define "recently."

In the context of the PC, about the past 7 years.

> The prices for complete personal
> computer systems, components have been constantly
> dropping since the beginning of 1982.

Of course. But until about 7 years ago, most complete systems were well
over $1000.
>
> Five years ago a complete PC sold for $500 plus tax
> at Lowes near Gig Harbor, Washington. Hewlett-Packard
> brand no less! :-)

That's relatively recently, Len.

Did it include a monitor? Printer? Supplies for the printer?
>
> Complete PCs - and laptop portables - can be purchased
> today at Fry's on the west coast for $500; go to
> www.outpost.com to see their mail-order products.

That's my point, Len. The prices *now* are far below what they were
even 8 years ago.

> >The

> The IBM representative showing off their PC at Rocketdyne
> in early 1982 was NOT taking orders in "2006 dollars."
> The Treasury Departement would have arrested both reps
> and IBM Corporation had they done so.

Ever hear of something called "inflation", Len? How about "inflation
adjusted"?

You know, how the value of money declines in an inflationary economy?

"2006 dollars" is a valid way of describing that.
>
> "Limited capabilities?" Only by today's standard.

No, by any reasonable standard. Heck, the original IBM PC was
considered obsolete long before 1990.

> In the
> early 1980s the first IBM PCs were the EQUAL in power of
> any 16-bit minicomputer then on the market.

And by the late 1990s they had been eclipsed by much more powerful PCs.

> Try to keep
> your time frame focussed. And cite your hands-on
> experience with either designing, building, or using

> minicomputers for a comparison. Feel free to indulge
> everyone on your 64-bit mainframe computer expertise.

The point is that those early machines were expensive and limited in
their capabilities.

The original 1981 IBM PC did not include a hard drive, color display,
network interface, modem or mouse as standard equipment. The software
available for it was limited and expensive.

> >As recently as 10 years ago, a complete PC system with reasonable
> >performance cost over $2000 - and its depreciation curve was very
> >steep.
>
> You did not do any "dumpster diving" for parts to build
> your own PC?

It's not about me, Len. It's about what computers used to cost, and
what they could do.

> Why not? Can't you build a functional IBM
> PC clone for just $100 in parts?

Actually, Len, I'm quite good at assembling PCs. For a lot less than
$100. In many cases, for no money at all.

My specialty is collecting older machines and utilizing the best parts
from them to assemble a "new" one. Usually I get them before they reach
the dumpster, but sometimes I have to reach in and pick something out.

It's amazing what computer hardware individuals and businesses throw
away these days. 17" monitors that work perfectly. Pentium II class
machines complete with CD burners, NICs, modems, etc. Sometimes the OS
is still on the hard drive. Cables, keyboards, printers, and more. It
is not at all unusual for me to find working but discarded computers
that cost more than $2500 new.

> Do you think you need
> morse code skills to program computer code?

Who needs to "program computer code", Len? Why do you live in the past?

> I know a few folks who have built whole new PC-compatible
> computers for LESS than $250 in parts cost. Three years
> ago.

But *you* haven't done it. I have.

It's also besides the point: Until rather recently (7 years ago,
approximately), PCs were quite expensive. Spending a couple of thousand
dollars is a different thing than spending a couple of hundred.

> >"The internet" was originally rather limited and not simple to access
> >for the non-technically minded. That's all changed now.
>

> Neither the Internet ("world wide web") nor commands for
> browsers accessing the Internet have changed in 15 years.

Not the point. What is the point is that there is much more content
available. And it's much easier and less expensive to access.

> Define "technically minded." Did PC users need university
> degrees to access the world wide web? I don't think so.

They did need some understanding of how to set up and use a PC. That
sort of thing used to be fairly unusual - not anymore.

> >On top of all this is the evolution of the PC from an expensive
> >techno-toy to an everyday tool in most workplaces, schools, and homes.
> >"Computer literacy" is now *expected* in most jobs.
>
> Jailhouse guards, housewives, nannies don't need "computer
> literacy."

Sure they do, Len.

> They can all be amateur radio licensees, though.

If they pass the tests and earn the license. You haven't passed the
tests and you haven't earned the license.
>
> >The synergy of low cost, easy-to-use computers, easy and fast online
> >access, and a reasonably computer-literate public has only come
> >together within the past 10 years.
>
> Yawn. Robert X. Cringely you are NOT. :-)

I don't claim to be.

> Why are you trying to tell me what to believe and not
> believe?

Because you got the facts wrong, Len.

> Why do you think YOUR "computer history" is
> "more accurate" than mine?

Because it is, Len. You got the dates wrong. You left out how much PCs
used to cost, and how little they used to be able to do.

If PCs have had an effect on the number of US radio amateurs, most of
that effect has happened in the past 8 years or less.

> Have you built ANY personal
> computer from scratch?

I've assembled several from components.

> No?

Yes.

> I have.

That's nice. Were they IBM-compatible PCs? Or were they simple systems
from 25-30 years ago?, and you're playing word games with "personal"
and "computer"

> Two of them, in
> fact. It was fun to do so for me.

That's nice, Len.

> Why are you trying
> to tell me what I "should" be having fun with?

I'm not - if you want to build computers, go ahead.

But if you want to discuss the effects of PCs on amateur radio, you're
going to see rebuttals to your mistaken assertions.

Morse Code can convey more than the words - if the operators are
skilled in it.

It's not the same thing as a voice, though. It's a different
communications experience, just as the written word is a different
experience from the spoken word.

> Since the medium and usually the hardware is exactly
> the same weather or not a microphone or a key is used, why bother with
> a key that is much more limited?

Several reasons:

1) It's often *not* the same hardware. You can use much simpler
equipment for Morse Code than for voice modes.

2) It's a different communications experience. (see above). For many of
us, that alone makes it worthwhile.

3) It takes up much less spectrum. With good equipment, five to ten
Morse Code signals can fit in the same spectrum space required by just
one single-sideband voice signal. AM and FM take up even more space on
the band.

4) It's more effective under adverse conditions. A Morse Code signal
typically has about 10-13 dB of advanatage over single-sideband voice.
That's about 2 S-units. Under conditions that make SSB unusable, or
barely usable, Morse Code will often be solid copy with good signals.

There are other reasons, but those four come to mind right now.

> Somehow, this relates to pixels on my
> screen but I have yet to understand why my opponent felt the need to
> misdirect, misrepresent and misquote.

Lots of that going around - on both sides. Don't let it bother you - I
sure don't.

> Can none of the pro-coders make
> a valid point?

I just made a couple of valid points. That doesn't mean there *must* be
a Morse Code test, just that the mode has some good points.

One of those old timers once told me that he recognized another
operators "hand" back when I watched him operate. I am not sure how
much more a person can get out of code.

>It's not the same thing as a voice, though. It's a different

Well, I did say "usually". But wouldn't simpler equipment limit you to
code only?

>2) It's a different communications experience. (see above). For many of
>us, that alone makes it worthwhile.

I am curious as to what would make it worthwhile.

>3) It takes up much less spectrum. With good equipment, five to ten
>Morse Code signals can fit in the same spectrum space required by just

Some very valid points here.

I could see the challenge in this. I remember a certain thrill back
when I was a kid, whenever I managed to make out a distant signal and
recognize where it was broadcast from.

I just don't like the snotty attitude that makes the ARS look so bad.

I am still waiting for my government handout. Never had any government
handouts in the 44 years I have been around.

Thank you for making some points in a nice, civilized manner.

My neighbor, when I was about 12 or younger, had a nifty tower setup.
He had 2 tall telephone poles in the ground with enough space between
them for a third pole bolted in near the top, adding almost the full
length of another pole, save for about 6 feet where all three were
bolted together. I was self-supporting.

RK%3AMESE%3AIT&rd=1

hint: the guy that makes and sells " probe " doesn't allow others to
resell it. he usually attacks and kills ANY auction or NG offer to
sell his software. when YOU buy and USE it , you agree to NEVER
resell it to others as a condition of using it (you never actually
own it). he has killed two of my auctions in the past and I've
heard he has pursued legal action at least one time against
a seller.

mentioning " probe " in your sale or auction is flirting with serious
trouble ..... people usually " show " it in the auction but NEVER
actually mention it as part of the sale (tho thats not a sure way to
stay safe) ....

just FYI ....

Yes, Some people are lazy and as long as there is a CW requirement they won't go for a ham license, or upgrade beyond tech. They don't really want to be hams enough to put out an effort to be one, but the ones that go for the CW and written exams really want to be hams, and will stick with the service and will be an important part of keeping it going.

Yup. Little things about an op's sending can make it as recognizable as
a familiar voice.

btw, the term "fist" is used in the same context as "hand" was used by
that op.

> I am not sure how
> much more a person can get out of code.

The words, of course. How they are sent can tell a lot, too. It takes a
bit of experience to recognize all the subtleties of Morse Code.

The main point is that skilled Morse Code operators can convey more
than 'just the words'.

> >It's not the same thing as a voice, though.

I think that is your main point.

Of course.

> But wouldn't simpler equipment limit you to code only?

That depends on the exact situation. The important point is that once
you have Morse Code skills, using code-only equipment isn't really a
limitation in most cases.

Simplicity of equipment can be very important in some situations. For
example, if someone wants to actually build their HF Amateur Radio
equipment, it's much simpler and easier to build a Morse Code station
than an equivalent-performance voice station. In portable operations,
the power requirement, size and weight of a Morse Code station can be
less than that of the equivalent voice station.

> >2) It's a different communications experience. (see above). For many of
> >us, that alone makes it worthwhile.
>
> I am curious as to what would make it worthwhile.

All sorts of things:

A) You can communicate without talking or typing. (In a world where a
lot of us spend a lot of time on the telephone and computer, being able
to communicate another way can be a real treat!)

B) The exercise of a skill is fun. Consider the person who learns how
to play a musical instrument: do you think making music (performing) is
the same experience as listening to recorded music?

C) Once you have the skills, communicating with Morse Code can be as
easy - or even easier - than using voice.

D) You can use Morse Code in situations where voice could not be used.
For example, suppose you are in a small house, apartment, RV, tent,
etc., and you want to operate without disturbing others (who might be
sleeping, talking, etc.). Of course you can put on headphones so they
don't hear the received signals, but in order to transmit, you have to
talk. Even if you keep your voice down, it can bother others. How many
times have you heard people complain about folks using cell phones in
public? But with Morse Code and a good pair of cans, you can operate
and make less noise than someone typing on a keyboard.

>
> Some very valid points here.

None of which mean that there *must* be a Morse Code test for an
amateur radio license. I happen to think such a test is a good idea,
but that's just my opinion.

> >4) It's more effective under adverse conditions. A Morse Code signal
> >typically has about 10-13 dB of advanatage over single-sideband voice.

>
> I could see the challenge in this. I remember a certain thrill back
> when I was a kid, whenever I managed to make out a distant signal and
> recognize where it was broadcast from.

Exactly! The very fact that it takes some skill is part of the fun and
attraction.
>
> >There are other reasons, but those four come to mind right now.

Here's one more:

5) The amount of "bad behavior" problems resulting in FCC enforcement
actions is much less from radio amateurs using Morse Code. Just look at
the FCC enforcement letters that address violations of deliberate
interference, obscenity, exceeding license privileges, and other "bad
behavior" problems. Almost all of them are for violations committed
using voice modes, not Morse Code. The difference is much greater than
would be expected from the relative popularity of the modes.

This doesn't mean all voice ops are problems or all Morse Code ops are
saints! All it means is that there's a lot less enforcement problems
from hams actually using Morse Code.

> >sure don't.
>
> I just don't like the snotty attitude that makes the ARS look so bad.

Agreed! There's too much of that type of attitude on *both* sides of
the debate.

> I am still waiting for my government handout. Never had any government
> handouts in the 44 years I have been around.

How does one define "handout"?

For example, is public education of children a government handout? Yes,
many parents with kids in public school pay school taxes, but in most
districts those taxes paid by parents do not cover all of the costs of
the public schools. And the level of taxation does not depend on how
many children the parents have in school. Is public school a government

handout to people with lots of kids?

Or how about tax deductions? Are they a form of government handout? If you have a mortgage or home equity loan, the interest is deductible. If you rent, you don't get that deduction. Is that a government handout to homeowners?

Not trying to be argumentative, just trying to get a clear idea of what is a handout and what isn't.

My pleasure. Thanks for reading.

Cool! I recently saw a similar setup used for a repeater antenna in a wooded area. It blended in much better than metal tower.

--

The question of whether there should be a Morse Code test for an amateur radio license really boils down to this: Does such a test do more good than harm? The answer is always an opinion, not a fact.

I know the comment about people leaving Amateur radio isn't Barrys comment,
but thought I'd address it anyway. I was 69 when I got my Tech license and
72 by the time I made myself pass the code test and got my General. A lot of
the avid pro-morse Hams are even older than I am. I know of no one locally
who has just quit the hobby and those senior to me are not leaving
on their own at all, when they do stop Hammin' it's 'cause their keys went
silent. I never used code after passing the test. I've got the thought in
the back of my mind that I may sometime
pursue a little CW, but it all depends on when I get my own SK notice.

> more good than harm? The answer is always an opinion, not a fact.

no the answer is not to be based on wether it does more harm than good
the question that must be answered isfirst what regulatory prupose does
it serve

no regulatory purpose and the test is ilegeal even if it could be shown
to do more good than harm

the other question is does the test serve the PUBLIC interest interest
no Procder ever deals with the issue of how Code testing benifits
memebrs of the public such as Len Anderson

That's because the group is NOT a proper binaries group. Most providers
only allow binary files in properly formatted binary groups, which would
require the group to start with "alt.binaries.*."

No he doesn't... It's not on Google's list. Nor is any other groups with
the word binaries in it. Apparently his news provider follows the
guidelines in use for Usenet. If you want to post it, put it in a properly
formatted and valid Usenet group.

Neither the Code NOR Theory tests will weed out the bad radio operator any more than a driving test will weed out the DUIs - OR - the Physical agility, legal and other exams will weed out bad cops. Those tests are only tests of "Proficiency" in the subject matter - NOT - "Mentality". Those tests won't stop the trash.
But those who choose to not learn code will continue to bitch about why they shouldn't. OK, DROP the code.....Next you'll want the "Theory" taken away too. Want to bet?

Fred G.

You don't need to know my callsign, all you need to know is that CW makes
for more skilled amateurs and that's why we need to retain the
requirement. CW also works a little as a filter to keep the sick, lame
and Lazy off HF. We need to bring back the CW requirement for Techs so we
can raise the intelligence level of conversations on the repeaters.

news:efokcn02s86@enews3.newsguy.com...

< snip >

> When listening to CW on my scanner, are there any tell-tale indications
> that the operator is dyslexic?

Not trying to be funny: "Yeah, he's the one who isn't on the air."

I have the problem and I'll never be a code op.

Samples in typing: "Th enext time; a liitle while". Int he first case
(look, there's a real one I didn't plan)

Starting over: In the first case, I swapped the space and the letter "e."
In the second one I double-lettered the "i" instaed of the "t." (Another
real one with "instead" in the last sentence.)

The problem is real and it's maddening. When somebody tells me I can learn
code if I really apply myself, I am tempted to go back at him with something
like, "True, and you could grow back the hair on your bald head if you
really apply yourself." Yes, it really is like that, except that there's no
combover for dyslexia.

I have to dial the phone very carefully and I must read back phone numbers,
as I do not translate them well among seeing, hearing, writing and dialing
them.

This seems to be a problem associated with the orderly sequencing of things.
Otherwise, I'm pretty good at math and very good at anything graphical
(maps, diagrams, schematics) or verbal (vocabulary, word games, puzzles,
puns). Go figure.

Thanks for asking.

5232. FT: RS PRO-26 for Sony ICF-SC1

Newsgroup: rec.radio.scanner

Fred

The theory questions even the extra exam is not that difficult. A
decent electronics tech with an AA degree can master that test. In
fact the tests are so dummied down that just about anyone that has the
ability read and comprehend can pass them with the minimal of
coaching. So if you think so highly your "Theory" tests then I hate to
burst your bubble.

Why should proficiency in one means of communication hender operation
in another? I tend to think that those that are very proficient with
morse code tend to spend more of their time with that mode of
communication. Why should there be a limitation on other modes that do
not wish to use that mode? Most hams learn morse code and then forget
it. I have no issue with showing proficiency in a means of
communication to get priviledges. I have no issues with showing a
proficiency with "theory" as a means of priviledges.

The thing here is usage of the airwaves is a priviledge and not a
right. So what ever the government cares to do in this avenue is fine
with me. I will take advantage of what ever they offer me.

james

I have apologized to the NG. I also have stated what it will take to
stop such behavoir so go talk to Robeson he was accusing Todd of both right
I returned to ng he ha accused in
my absense Hans of both pedo- and Zoo- phlia. he accused BB of child
molesting

I will not allow Robeson or anyone else to sence by harrassment if
that means firing back so be it

I am sorry that I have found it needfull to use such tactics I
apologize again to the NG in generalmore like 50 perscent the rest would go
with your buddy K4yz
but yes their is still magaic I play with it (although yes acess to HF
would be a help as I learn the ins and out of EME and other VHF+ modes
pity that progress in the ARS is opposed at every turn by hams
themslves with the punce gotcha he wonders why I simple don't bother to ty
impoving my spelling do u hav anyting cognet two say?

My comment was based on this statement on the Grove site:

Getting The Most From The New Uniden Scanners
by Paul Opitz

"The major impact of rebanding will be on all Motorola analog using the
BC-235/245/895/780/250D/785D scanners and P25 systems using the
250D/785D scanners. The fore mentioned scanners cannot be used when
rebanding plan is implemented and cannot be flash upgraded. The
customer will have to buy a new scanner to monitor any system that
changes frequencies due to rebanding. "

and in stating that you just used the Consitution of the USA as toilet
paper

it is just that simple

the govt officail to regulate radio would derive from the "Nessary and
proper clause" the ITU treaty under the supremacy clause and the rest
to US (or the staes how are then exclude from radio regulation by the
ITU treay)
in partical the Govt has one other source of power over radio a(and
anything else they should not have) the willing of citizens to lie and
take it

The Govt had the power (and legal duty) to do code testing till 2003
when the treaty changed

the FCC has conceeded its intent we are waiting on them to push the
paper

James,

Rethink what I wrote. I'm not claiming the tests are "all that"..... You are right, they ARE dummied down and NO, you do NOT need an AA degree to pass the Extra. Just some diligent studying. I was merely saying NEITHER test will eliminate the crap - for starters. BUT those who "are" whining about the code - if they get their wish, will then want the written exam dropped too. In other words - FREE - uninhibited passage. IF we gave Drs', Lawyers, Drivers, Pilots and other licenses away like some want the Ham licenses handed out, where would we be? Ham radio may not be all that, but it is what it is. Anything more stripped away from it - and it won't be worth having.

"I" had to learn the code, it really is no big deal. Do I use it? Not much, but I'm still glad I learned it. It was a matter of self discipline. Hey, drop the code......Who am "I" to force it down anyone's throat? That isn't my aim or argument. Again - you're going to see the push for the rest to be dropped too - some just aren't satisfied. Mark my words.

Fred G.

duely marked but exactly who do you think is going to push for this?

personaly I will push to cponsolate down the number of classes which
will reduce the number of tests of course and since there will not be
as amny defferent set of band edges the number of question wiull
certainly drop further

but the only people claiming the written test will are those insistign
the code test should should not die

I read your post and understood it. My beleifs is that those that will
complain about a "theory" test are those that want the license handed
to them. They don't want any kind of test. Unless the government does
that, I still hold that some form of written test is applicable.

I learned enough code and then I never touched a key again. Made two
contacts total via morse code. Never cared for it and never intend to
use it. At the time my interests were more in VHF/UHF anyways. HF was
to much like CB. He who had the biggest amp and antenna was heard.
VHF/UHF systems require more than a big amp and a big antenna.

I whined about the code requirements and still do. But I also
understand, that what ever the government determines as the standard
for obtain levels oflicensing are the rules that I ahve to play with.
As I stated I have no issues with levels of "theory". That part to me
is easier to learn.

james

Who is "we"?

FCC makes the rules. They're the ones who have to be convinced. For more than 25 years, FCC has been convinced that the Amateur Radio license exam requirements should be reduced. The changes have come a little at a time, but the direction has been the same since the late 1970s.

in thereoy Jim we do make the rules, at least in the usa (outside the
usa well YMMV)

in paractice the FCC does based on what convinces it

and depite theARRL and other gruops supporting code a smale numbe rof
the people exercising our lawfull rights and duties as citizens have
maneaged to convince them otherwise

you neeed to look at that NoCode is poised to to finsihs off code
testing in the USA .

why becuase we could mount a better arguement than you your side could

You're just lazy. Lucky for you they dumbed things down so you could
slide into the Tech class.

You raise some good points Jim. That's why I've always proposed the following licensing changes:

1: No more automatic renewals. Individuals must retest and pass all elements required for their license class.

2: The passing score for written exams needs to be raised to 85%.

3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

4: Make the no-code license one year non-renewable.

I know, but we can send them emails and tell them we won't go for anymore
dumbing down or simplification. They'll do what they want, but at least
we tried.

>customer will have to buy a new scanner to monitor any system that
>changes frequencies due to rebanding. "

That doesn't say that certain other scanners WILL be flash-upgradable
- it only addresses whether those 8 will be, and they won't,
regardless of the final outcome of rebanding.

Whether any current scanner will be upgradable - by flashing or
otherwise - after rebanding remains to be seen. If, for example,
channel numbers can be arbitrarily assigned to frequencies (there's
equipment that can do that now), you won't be able to program a
scanner unless you have that assignment list - which would probably be
closely guarded.

We're all - users, designers and manufacturers - in the same boat.
We'll just have to wait and see. And you can bet that it's going to
take longer to arrive at the final solution than it's supposed to.
When has a government job ever come in early or for less than
originally planned?

That's not dyslexia - it's your fingers and your brain not working
together. "The exnt itme" looking right to you would be dyslexia.

>The problem is real and it's maddening. When somebody tells me I can learn
>code if I really apply myself, I am tempted to go back at him with something
>like, "True, and you could grow back the hair on your bald head if you

>combover for dyslexia.

Except that I type like that too sometimes (and I'm not dyslexic),
which is why, even with a spell checker I reread my posts before
posting them. And I can still copy CW at somewhere between 15 and 20,
although I haven't sat down to copy any long transmissions in over 20
years - but I used to rag chew at 40+.

There's a difference between a keyboard and a key or bug. (Never
could get the hang of paddles.)

>This seems to be a problem associated with the orderly sequencing of things.
>Otherwise, I'm pretty good at math and very good at anything graphical
>(maps, diagrams, schematics) or verbal (vocabulary, word games, puzzles,
>puns). Go figure.

Since CW is more a verbal skill than a written skill, dyslexia
shouldn't affect it much (although I don't know of any studies done on
the subject - it's just a seat-of-the-pants guess).

> dumbing down or simplification.

That's not how it works. What does "we won't go for anymore dumbing down or simplification" mean, specifically? Those terms mean nothing to FCC - they want specifics.

For example, you might consider the reduction of the General and Extra to 5 wpm to be "dumbing down". But way back in 1990, FCC made those licenses available with just 5 wpm code and a medical waiver. FCC has said, publicly, that they see no difference between medically-waivered "5 wpm" hams and those who passed 13 and 20 wpm when it comes to enforcement issues. How do you respond to that argument?

Way back in the early 1980s, a president with initials RR was elected in part on the promise to "get government off your back". That translated to less regulation and simpler regulation, as well as less money for "legacy" government agencies like FCC. So they have gone for simpler and easier ever since.

> They'll do what they want, but at least
> we tried.
>
Did you comment on the recent Notices of Proposed Rulemaking? Or the various proposals that FCC accepted comments on?

That's how FCC accepts input.

And when the various proposals have been presented, the majority of those commenting support Morse Code testing, and relevant written testing.

But they aren't an overwhelming majority. 55% is about the max.

And FCC doesn't have to do what the majority wants. They decide what to do based on a whole bunch of factors. Comments are only one factor.

No test will weed out 100% of the "bad apples". That does not mean
tests have no effect.

Would you rather that we not have driving tests, since the they
obviously don't weed out all the bad drivers?

> >>Those tests are only tests of +++"Proficiency" in the subject matter -

No need to bet.

There have already been proposals to reduce the written exams below
what they are now. Fortunately, they have been rejected by FCC - so
far.
>
> > The theory questions even the extra exam is not that difficult. A
> > decent electronics tech with an AA degree can master that test.

The youngest Extra I know of earned that license at the age of seven.
You don't need any sort of degree to pass the exams - nor should you.

> > not wish to use that mode?

Because it's part of being a qualified operator.

> > Most hams learn morse code and then forget
> > it.

Well, some do. I don't know about "most".

How many hams learn the theory and then forget it?

> > I have no issue with showing proficiency in a means of
> > communication to get priviledges. I have no issues with showing a
> > proficiency with "theory" as a means of priviledges.

The argument seems to be this:

"Why should someone have to learn Morse Code in order to use other
modes? Let those who want to use it, learn it, and the rest not"

If you accept that argument, how do you oppose the following:

"Why should someone have to learn theory in order to use a manufactured
rig?"

"Why should someone who only wants to operate HF have to learn about
VHF and UHF?"

"Why should someone who only wants to operate QRP have to learn about
RF exposure?"

"Why should someone who only wants to use vacuum tube equipment have to
learn about solid-state?"

Etc.

In other words, why should anyone have to learn anything they don't
intend to use?
>

Why?

And who will do all the testing? There are over 650,000 US hams now. We get a couple of thousand new hams per month - that works out to about 2,000 exams per month.

If 10% of those 650,000 have to retest each year, that's 65,000 per year. Which is more than 5,400 additional exams per month.

Are *you* volunteering to do all those exams?

> 2: The passing score for written exams needs to be raised to 85%.

Sell it to FCC.

> 3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

Sell it to FCC.

> 4: Make the no-code license one year non-renewable.

Why? Does a person forget that much in a year?

And who will do all the additional testing?

Why retest knowledge? Not necessary unless your intention is to reduce the ranks of the amatuer radio service. Few if any government priviledges require constant retesting for renewal. Your thinking is not logical.Besides it increases the government and costs. The government would then be forced to charge for licensing.

>+++2: The passing score for written exams needs to be raised to 85%.
>+++
****

Again 70% is sufficient. Raising to the limit you suggest is more a weed out than anything else.

>+++3: Code elements should be 13 wpm for General, and 20 wpm for Extra.
>+++
****

The ITU no longer requires CW for any of its commercial services. Why do you stillinsist on such high levels. Again your motive appears to be more selective as to who may be granted a license.

>+++4: Make the no-code license one year non-renewable.

Why? when this class already has very strong restrictive priviledges. This would not be the incentive to upgrade to a higher license. Some maybe satisfied with the priviledges of this class and making it a one year nonrenewable will not be the incentice to an upgrade path. Instead it will be another step in restricting any growth in the amature radiio service. Then again if you prefer dwindling numbers, go ahead. Radio and its associated costs can not compete with the internet. If I want to talk to some one in Australia it is now far easier to use IRC or other messaging programs in conjuction with the internet. If you intend to further restrict the amature service to nothing more than a "good ole boys club", then you yourself have become the problem.

The interesting thing is that almost all amateur radio magazines have
been attempting to feed us the line that amateur radio is not being
dumbed down, yet it is quite obvious that it is.

While you guys are waiting for the Great Liberty Net
(the greatest net on ham radio - Sat evenings 10:00 PM
on 3.950 LSB +/1 20kc QRM) check out the website
http://www.ve7kfm.com/ for some VERY AMUSING
audio clips of the guy from "Can-Ahhh-Duh" who loves
Americans and other peoples. Where else caoud you
get great DOWNLOADABLE SOUND FILES like
the great Sid-the-Lid talking about "nig-er ballgames"
and other stuff like this..?

Example: http://www.ve7kfm.com/niggers.mp3
"Madera's good friend Sid (BLB) discusses
niggers: "Out of five channels on, we had six nigger ballgames." "

Where else but on HAM RADIO can you get
such STELLAR ENTERTAINMENT as this ?? !!

Hey gray-beard!

Show me where a Sony SC1 is "easily modded" for all bands? Do you
even own one? Plus, the PRO-26 came out in 1995. If my math is correct, that
makes it 11 years old, NOT 20 years old

So, now who is out of their mind????

Fuck the code only shit. Why should that be the only element? Why not make all amateurs retest in ALL modes, at all frequencies, et al. And what the hell, while we're at it, let's just go ahead and make it yearly. Don't let the old geezers off so easily. When a new mode is adopted, or allowed, make those bastards show proficiency there as well. That should just about do the ARS in. Why should you have it your way, SC?

Well said. SC and his ilk are what is wrong with the ARS today. But hell, who knows when I will need morse to facilitate my rescue from a capsized cruise ship in the Gulf of Mexico. I will be the one! No one will know there are really people inside the ship, unless of course, I pound the hammer I had with me on the inside of the hull. And to boot, the Coast Guard no longer teaches morse, so hopefully SC will be there to copy.

BWAAAAAAAAAAAAHAHAHAHAHAHAHAHA!!!

I don't hear/perceive/recognize/distinguish/discriminate the dits and dahs
correctly. I can learn that dit-dah-dah-dit is G (or whatever it is -- I am
not sure and I am certainly far, far beyond caring) and five seconds later
not be able to distinguish it from dah-dit-dit-dah.

What's the fix for it?

The ADA says? So what? I suppose that you will next enlist their aid in
getting the 5wpm requirement dropped so you can move on to HF. Heck, that
way you can be a Zero wpm General.
And if Steve Hawkings ever tried to apply for, and failed, a Ham license,
please tell us when.

Don't get rid of your CB, Mark.

Of course it is modifiable. Cut one trace and add one jumper and it's
done. Yes I have one. AM and Wide and Narrow FM all the way from 5-kHz
to 1300-MHZ. 5-12.5-50 &100 kHz step sizes.
Now why would anyone trade one of these for a limited Pro-26
There is no comparison

You're not supposed to learn dits and dahs, any more than, in French
class, you learn the letters of the alphabet. You're supposed to
learn the words in CW. Anyone listening to the dits and dahs
(dyslexic or not) will never gain any proficiency in CW.

>What's the fix for it?

Learn it by the sound, not by the individual element - the same way
you'd learn any other language. See if a ham club near you has
classes. If they do, see if the person teaching CW knows the
difference between learning the dits and dahs and learning CW by
sound. If s/he does, take the course.

I started teaching myself CW (as a kid) by individual letters. After
using it on the air for a year (we had very little choice in those
days - Gonsets were too expensive for most of us, and there weren't
too many other ways to get on 2 meters) I was listening to the
content, not the dits and dahs. I still have to "hear" the sound in
my head when someone posts dots and dashes in a Usenet post - I never
learned to "read" "written CW".

>>well ADA says you and I should be allowed to take an acodated test with
>>US choosing whatever accomodation we choose

No it doesn't. There's something in there about the test actually
testing for the thing it tests for.

Can you just imagine a totally blind from birth person "choosing", as
a test for a job that requires color matching, a test to see if he can
tell the difference between Braille labels on paintings? Or a "test"
for someone who can't drive due to a disability consisting of testing
his ability to hail a cab? A test for the ability to receive AND
DECODE CW consists of your listening to, or seeing, *CW*! We don't
test a translator's ability to translate French to English by giving
him the English translation and seeing if he can "read" it.

That makes as much sense as a man insisting that it's sex
discrimination to not hire him to model women's clothing - something
that's been thrown out of the courts so many times it has permanent
skid marks. Sue the FCC if you like, but make sure the courtroom
doors are open or you'll get hurt when they throw your case out so
fast the splinters will fly.

>> persnaly Id choose a code
>>reader and would of course oviate the test all together. fairer still
>>is stop dumbing down everyone in the service with test

Fairer still is to accept that there are a number of ways to get on
the air, one of them being to prove a certain very low level of CW
proficiency. (5 wpm isn't even reading CW, it's "decoding" individual
dots and dashes.) Would you accept a blind person's insistence that
he be allowed to travel the same way that you do - by driving his own
car? After all, he's disabled, so he can choose whatever test he
likes to get his driver's license. How about a test listening to
someone talk and seeing if he can hear the speech?

>> that greatest
>>physists of the last century could not pass if they wanted to ham I
>>refer to Einstain Hawkings and Dirac

What has being a physicist to do with being a ham? But I'll go along with that - in order for you to keep your license you can skip the CW portion of the test, as long as you produce a PhD in physics. Deal? (BTW, Einstein, Dirac and Hawking weren't/aren't physicists. They were/are all mathematicians, although that's questionable in Einstein's case.)

Wrong. Here's part of Hawking's bio: "In March 1959 Hawking took the scholarship examinations with the aim of studying natural sciences at Oxford. He was awarded a scholarship, despite feeling that he had performed badly, and at University College he specialised in physics in his natural sciences degree. He only just made a First Class degree in 1962 and in [1] he explains how the attitude of the time worked against him:

"The prevailing attitude at Oxford at that time was very anti-work. You were supposed to be brilliant without effort, or accept your limitations and get a fourth-class degree. To work hard to get a better class of degree was regarded as the mark of a grey man - the worst epithet in the Oxford vocabulary.

"From Oxford, Hawking moved to Cambridge to take up research in general relativity and cosmology, a difficult area for someone with only a little mathematical background."
(From http://www.gap-system.org/~history/Biographies/Hawking.html)

From http://archive.ncsa.uiuc.edu/Cyberia/NumRel/EinsteinLegacy.html:
"Einstein's college record as an unenthusiastic student is fairly well known. So, too, his independence and questioning of authority, all of which may have prevented him from landing an entry-level academic position once he graduated in 1900 with a degree in physics."

From http://nobelprize.org:
"In 1909 (Einstein) became Professor Extraordinary at Zurich, in 1911 Professor of Theoretical Physics at Prague, returning to Zurich in the following year to fill a similar post. In 1914 he was appointed Director of the Kaiser Wilhelm Physical Institute and Professor in the University of Berlin."

So both Hawking and Einstein were trained as physicists, and had the equivalent of a minor in mathematics. Only Dirac (originally an electrical engineer) had a major degree in mathematics.

So what if it is modifiable? There is nothing to hear in the cellular band nowadays. Are you still living in the 1980's? Take away that, and they are about the same. And what about the fact that it's NOT 20 years old like you said? Do your homework next time!

I could care less if nobody wants to trade. I already have a PRO-43 and BC780XLT.

Now if by "words" you mean the collection of dits and dahs that make up an individual letter, I totally agree with you. One should never resort to counting dits and dahs. However, IMHO, the next step to recognizing words (ie groups of letters) comes with time and a lot of experience. I would also agree that until one can copy "words" by sound, that there will be a certain speed limit that you will not get past: For me that wall has been around 20 wpm or so, depending on the quality of the sent code.

FWIW, I have a hell of a time copying code a slow character speeds: < 10wpm character speed. At this speed, I no longer hear the 'sound of the letter', only a bunch of dits and dahs. I find myself playing each collection of dits and dahs back in my head at a higher speed --- bizzare. I first learned slow code with farnsworth (21 wpm character speed) and longer inter character spaces to give the effective slower WPM rates. Increasing speed involved reducing the inter character space time.

One could test using light rather than sound if the disability were auditory in nature. Or by feel --- with a vibrating device delivering the dits and dahs.

Part 97.509(k) The administering VEs must accommodate an examinee whose physical disabilities require a special examination procedure. The administering VEs may require a physician's certification indicating the nature of the disability before determining which, if any, special procedures must be used.

If one looks at the Basis and Purpose for the government licensing Amatures, I am not sure I see much justifcation for continuing the CW testing. I am a KNOW CODEer. It took me a LONG time to learn code. It was one of the hardest things I have had to learn. It is still hard for me: Although it is my preferred operating mode. I must like pain. I do see the requirement of learning code to be good for THE HOBBY: It introduces new hams to a fun part of the hobby they might not therwise find out about. Though I am not sure it is the role of the FCC to do what is best for THE HOBBY.

since you seem to be a mode to listen let me try Itis my understanding
and beliefnthat the Mandate legaly of the FCC is to serve the interest
of the PUBLIC in all of it regs (at least that is the thery)

Therfore in my If some one made the case that Code testing was good
for the ARS they have NOT finished the job for making it a requirement
Klien is found of throwing up red herrings (and it is begining to
realy stunk from that

the Facts is CW is not required to achive the stated pruposes of the
ARS

many Hams NEVER use it and many rarely do

the question the ProCoders avoid is how does code testing benifit the
PUBLIC at large?

if there answer it does not realy that it can not be shown to then the
question of wether it benifits Ham radio is moot and with the end of
the treaty requirement I cointend (and others) that constutituionaly
the FCC lacks the POWER to require it

when you add ADA which allows the disabled to choose thier accomdation
(the FCC section you cite is belived by LWAYERS to LEGALY invalid, all
it takes about 5K dollars to spare to prove it

if an ADA chalange went we would have people like efectively not
taking the test and yet demtrating that we HAVE some abilty to use the
mode I have quite a bit of on AIR CW work with computers (I engaged
for 2 reason to see how well it worked and to provide a an interactive
target for code practice to friend of hgoing for various level of
license surely even my worst detractors will grant if I can follow MY
typing translated to Morse Coded CW at a given speed you can pass a
test at the same speed)

as to machine morse in general I find I can decode with machine and
panographic signal display to alow to see the signal I can follow the
going of ARRL straigh key night fairly well, why isn't that enough if
there were a need for CW?

The stated purposes as put forth in Part 97 would seem to support that. In case you didn't notice, I am not saying the FCC should be requireing the CW test.

>
> many Hams NEVER use it and many rarely do

True. And many Hams use it. I was on 20 meters this evening and the CW sub band was wall to wall operators --- much more than on the phone subband --- not that means manything special.

>
> the question the ProCoders avoid is how does code testing benifit the
> PUBLIC at large?

I suspect you are being kind. I fear many want the code requirement so as to protect their vision of what Ham radio should be. I am not sure that requiring CW and not requiring proficiency in any of the digital modes makes any sense. Its the inconsistency that seems weird.

>
> when you add ADA which allows the disabled to choose thier accomdation

I'm not sure I get your point. I can have someone read me a book (books on audio tape) , or I can read it myself. I prefer reading it myself. However, listening to an audio tape doesn't demonstrate that I can read.

>
> as to machine morse in general I find I can decode with machine and

My CW skills are always a challenge. Yet I can usually copy (<20 wpm or so) better than most software programs .. especially in noisy conditions QRM or QRN.

Again, I am not sure I think CW should be a requirement. I think it is good for the HOBBY. I am not sure it is relevant to the service regulated by the FCC.

It's hilarious watching you CB'ers whine about CW. Well don't worry, it
looks like the FCC is going to give you your dumbed down licenses.

Could you pass all the tests again today, or would you have to study a
little first? My arguement has always been for the quality of licensees,
not the quantity of them.

>>+++2: The passing score for written exams needs to be raised to 85%.

Requiring an 85% passing score means more study before taking the exams,
which translate to a better understanding of the material. My arguement
has always been for the quality of licensees, not the quantity of them.

>>+++3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

Hams should be skillfull. Proficency at CW gives hams a way to
communicate, when no other way might be possible.

>>+++4: Make the no-code license one year non-renewable.

Requiring future study in order to continue to be licensed will make for more knowledgable hams. They will be assets. A national resource. My arguement has always been for the quality of licensees, not the quantity of them.

> Instead it will be another step in restricting any growth in the

> nothing more than a "good ole boys club", then you yourself have
> become the problem.

Everyone is welcome in the "good-ole-boy" club if they're not lazy and are willing to learn. If not, there's always CB for them. My arguement has always been for the quality of licensees, not the quantity of them.

Having to work a little to get/gain something gives a little sense of pride in the accomplishment and you appreciate it and take care of it. It's valuable.

Getting handed something for nothing cheapens it. Don't cheapen ham radio. Rigs don't come with kill-filters to notch out bad ops and lids, so let's support policy that minimizes the number of lids on the bands.

I could pass them all again, no study needed. And that goes for
written, Morse Code receiving and Morse Code sending.

Bring out any FCC amateur radio license test from Novice to Extra, from
any time since I first got my license in 1967, and I'll pass it. I'll
probably even be able to pass tests from long before I was licensed,
too.

Every so often I try an online practice exam, just to be sure. No
problem.

BUT

I don't see any reason to require routine retesting of hams who haven't
broken the rules. FCC trusts us to keep current - that's part of the
"conditions of grant".

FCC currently uses retesting as a sort of enforcement tool - if someone
acts like they don't know what the rules are, or if there is some doubt
as to whether a test session was on the up-and-up, FCC will sometimes
require a specific retest.

If you demand that all hams be retested, what you're telling FCC is
that we cannot be trusted to keep up with the rules. Is that a good
thing?

FCC doesn't require routine retesting of commercial licenses - why
should they require it of amateurs?

And once again: Are *you* willing to volunteer your time to help with
the restesting?

But not, as requested, by using an electronic CW reader to test
whether the testee could read the resulting Latin alphabet display.

>If one looks at the Basis and Purpose for the government licensing Amatures,
>I am not sure I see much justifcation for continuing the CW testing.

Or theory - the only valid test is a practical one to demonstrate
knowledge of operation, which has never been given, and the laws. No
one builds any more, so knowledge of the circuits inside a radio isn't
really needed. Nice if you want it, but not needed to operate.

>Though I am not sure it is the role of the FCC to do what is best for THE HOBBY.

If you look at the FCC's entire justification for the hobby, you'll
see that CW wasn't an issue once AM was invented. But knowledge of
digital modes should be tested for now. If the justification for the
hobby has anything to do with anything.

Now try when the signal is a few db UNDER the noise floor and you'll
see why CW is still a valid mode. (I'm sure that, as a CW operator,
you know what I mean.) How many db under the noise does a voice
signal have to be before it becomes just part of the noise? (I
believe the actual figure is 6db ABOVE the noise to be readable - that
gives CW an advantage of about 12db.)

That's about twice the normal wall. You may already be past it
without realizing it.

>FWIW, I have a hell of a time copying code a slow character speeds: < 10wpm
>character speed.

You remind me of when I took the CW test in Navy boot camp. My paper
consisted of Ts and Es. When the instructor challenged me, I told him
that I really couldn't copy anything under about 10, and I was more
comfortable around 30. (I was taught CW by W2RD, who could copy 65
with a pen and an ink well, and talk to you while he copied.) The
instructor took my challenge and cranked the TG34 (or Navy equivalent
- I can't recall any more) up to around 20. When he saw me yawning he
cranked it up to 30.

5 minutes of perfect copy later ...

But 1wpm (which is what they gave you after "teaching" you E, I, S, H,
T, M and O) was impossible for me. I couldn't hear the lengths of the
spaces well enough to tell where the letters ended.

Well ... they used to require actual use for renewal, but with the
change to "apply and ye shall get" lifetime licensing, you can get a
GRL and keep it till you die without ever using it.

For about 90% of the things that used to require the license, you do not
even need one anymore.
Some companies may require you to have one on the false security that if you
have one , you know what you are doing. I had the First Class at age 22 and
I have never seen a comercial TV or Radio transmitter. That was over 30
years ago.

Slow Code, who gives a crap what you think about the code. If you
spread as much hatred on the ham bands as you do on the newsgroups
then I would never want talk to you on the air. I'll bet you are a
repeater jammer or jam people on hf all the time. Anybody that does
and says the things you do on here is sure to be a jerk on the air. No
doubt about it. And by the way I am top posting again. Post your call
for all to see or are you too ashamed to. Your name should be No Balls
instead of No Code. 10-4?

That's the method of Jerry Ziliac, who sends the code at 21 WPM, so that the dits and dahs become a single entity. That only worked for me for some of the characters. The only 4-element Morse I know for sure is <Q> DAH-DAH di-DAH from the mnemonic PAY-DAY to-DAY. All the rest are a jumble.
Sorry -- I failed at this enough times to know it's not hap'nin'.

While not as central to the hobby as it was in the 50's and 60's. There are a lot of builders out there. Elecraft have thousands of radios out there. I am sure the Norcal series radios number in the many of thousands. Personnaly I have e K1, K2, (KX1 on order) and a Norcal 40M in addition to an ICOM on KF.

> so knowledge of the circuits inside a radio isn't
> really needed. Nice if you want it, but not needed to operate.

Circuit knowledge hasn't been NECESSARY for decades. Most kit radios of the 50's (I build some Heathkits ,myself as a kid and helped my Dad with a few large projects) had excellent instructions.

.

They had those well into the 1980's. man I really do miss those.

I have built more than my fair share of kit radios over the last couple of decades (its even more fun trying to build them by braille). its still an excellent learning experience (there is always going to come a time when being able to use a soldering iron will be helpful in repars).

Here's an idea.

Maybe if you relay your messages through Markie and he relays his
messages through you, the mistakes will cancel out and your messages
will make sense to the rest of us. Just an idea.

SC

Everything has been dumbed down, not just ham licenses. We can't have
skills anymore in america, everyone has to be equal. That's what happens
when liberals get to make & change policy. Too many liberals in
government.

SC

5333. It was a mistake for the ITU to eliminate the CW requirement.

If an amateur had to relay a through a country and the amateurs didn't know each other language they still could have passed it by CW and the message could have been delivered to someone that could read it. Not no more.

When things start failing communication wise worldwide, amateur radio might be all there is to relay messages, and the ITU just removed one of the legs of a three leg stool.

There are a lot of CW operators out there too. "A lot of ... out
there" doesn't seem to be the current criterion, does it? :)

Which is the point I was making - if we eliminate everything we don't
actually need for operation, the only things left are the laws and a
demonstration that we know how to flip the switch. Which would
probably suit the "let's eliminate the code entirely" crowd just fine.

>> so knowledge of the circuits inside a radio isn't
>> really needed. Nice if you want it, but not needed to operate.

>Circuit knowledge hasn't been NECESSARY for decades. Most kit radios of the
>50's (I build some Heathkits ,myself as a kid and helped my Dad with a few

But getting them to operate properly (except for that fiasco of a 2
meter transceiver they put out - the one that doubled as an aircraft
transmitter) took at least some little bit of knowledge. It was
really something that you could completely align a (then) modern color
TV set with nothing more than the parts in the kit (and you could
align it almost as well with them as you could with a shop full of
test equipment - I checked a few of them), but for most of the ham
gear you had to have some idea of how the circuits operated to get
them working really well. Not an engineering degree, but a little
more than the "theory" on the novice test.

(Granted, if a legally blind person could build a transmitter - K2TCF
built his Apache after he lost his visual acuity - and get it working
well, the Benton Harbor gang knew what they were doing.)

I don't think so.

> We can't have
> skills anymore in america, everyone has to be equal.

Where do you get that idea?

Equality of opportunity, yes. That's not the same thing as equality of result.

>That's what happens
> when liberals get to make & change policy. Too many liberals in
> government.
>
Either you don't know your history, or you've got some weird definition of "liberal".

For example:

Were JFK and LBJ "liberals"? It was under their administrations that we got the rules changes known as "incentive licensing".

Were Ronald Reagan and George H. W. Bush "liberals"? It was under their administrations that we got:

- FCC exams replaced by VEC exams

- Openly published question pools

- End of Morse Code sending test

- General/Tech written test split in two parts so that Techs did not have same written as Generals

- Medical waivers for 13 and 20 wpm code tests (Bush "asked" FCC for this directly, as a favor to a King that was a ham)

- Technician lost its code test

Is George "Dubya" Bush a "liberal"? Under his administration, we got:

- FCC support for BPL

- ITU treaty changed to eliminate wording requiring code test.

- NPRM proposing complete elimination of code test

Now - are all those folks reducing the requirements "liberals"?

The pro-code arguments seem to be getting sillier and sillier.

I am a know-coder. I enjoy it. CW is my primary mode. I encourage others to
join in. I do not believe for one minute that CW is going to save the
world. I am not sure the FCC should be requiring it while not testing for
the various digital modes or message handling - seems inconsistent

Jerry, I am a 20 wpm extra and I used to agree with some of the things
Slow Code was saying BUT, after all the BS he has created on the
newsgroups I am starting to change my opinion. His constant bullcrap
on here makes me sick. Its ok to state your opinion and move on but he
has a real problem. I mean posting every day in rec.radio.swap for
Christ sake. For someone so worried about people doing the right thing
he is the worst example.

if you want to stop ham radio being dumbed down you need to turn in
your license and BAN the use of CW which has made mindless wrecks of
people like yourself I presonal don't advocate that course of action
but it is the way stop the dumbing down of radio

given the fact nothing in the written is go or nogo I don't meind it
being there although a great deal of the stuff their realy needs to go
(why does anything need to memeroze that frequency with in FS ATV that
is Black (or what ever color) there is NO need to know this at all
even if you are operating the mode

yes I would pare alot of stuff away from the current written and add
other stuff and certain reargange twhat is tested at what in the
licenseing structure (I would pull from the tech pool all the question
of skip since it is a minor factor at VHF and up ptu these question in
the genral pool

It's consistent with dropping requirements all around. Broadcast
stations no longer need licensed personnel on duty (that's been the
case for a few decades now), you can repair two-way radios without
being licensed and you can operate on the ham bands without having to
really pass any test.

funny I seem to recall taking a test and my wife took one a few months
ago for her license

of course you still can't tell me why it is important to know wether a
given circut is a colp[itts or hartley occilator

till you can explain what value knowing the name has you can begin to
convince me that you went a through a test as realavant as mine

The licensing hierarchy (and the morse code debate) isn't about value, it's about status. It's about having a chip on your shoulder that says "I'm better than you".

I serve the ham community with selfless determination to try to save its
members from their complacent attitudes. I need no recognition. I'm a
humble servant. I seek no glory.

God bless america

Amen

It's the state of that nation. Everyone's got to have their handout.
Outcome based licensing. Can't have both quality and quantity anymore.

With todays electronics, size and weight really aren't much of an
issue.

I dunno..I guess I like hearing things like gender or a foreign accent
to add spice to communication.

>B) The exercise of a skill is fun. Consider the person who learns how
>to play a musical instrument: do you think making music (performing) is
>the same experience as listening to recorded music?

Hmm..well..not really a good analogy. Listening to music is only a one
way street while both performing music, as well as radio
communications, is naturally a two way street.

>C) Once you have the skills, communicating with Morse Code can be as
>easy - or even easier - than using voice.

Not quite sure how, but I'll take your word for it.

>D) You can use Morse Code in situations where voice could not be used.

Perhaps the typical ages of people who prefer code could be a factor.
It does tend to be considerably older people who prefer code.

>> >> Somehow, this relates to pixels on my

>
>> I am still waiting for my government handout. Never had any government
>> handouts in the 44 years I have been around.
>
>How does one define "handout"?

Based on the comments, it would seem that the offending poster was
referring to something that was unique to Canada. About the only thing
I can think of is our medical care system. And THAT'S not really free
at all, as I will explain further below.

>For example, is public education of children a government handout? Yes,
>many parents with kids in public school pay school taxes, but in most
>districts those taxes paid by parents do not cover all of the costs of
>the public schools. And the level of taxation does not depend on how
>many children the parents have in school. Is public school a government
>handout to people with lots of kids?
>
>Or how about tax deductions? Are they a form of government handout? If
>you have a mortgage or home equity loan, the interest is deductible. If
>you rent, you don't get that deduction. Is that a government handout to
>homeowners?

Now as for mortgages and home equity loans, the interest is NOT a tax
deduction here in Canada. That could be considered a handout that

Americans enjoy, something Canadians can't enjoy. Also, Canada is the
second highest taxed nation in the world. Renters get a wee bit of a
break in some provinces but not here in Alberta, Canada's "Texas".

>Not trying to be argumentative, just trying to get a clear idea of what
>is a handout and what isn't.
>
>> >> Can none of the pro-coders make
>> >> a valid point?

Oh PuhlEEEZE!!! Spelling Canada with a "K" is a good sound argument?
Calling me a "lazy ass" is a good sound argument? Claiming I get a
handout is a good sound argument?

You have NEVER put out ANY kind of argument at all!!! Why don't you
try to cite some source that back up any of your "good sound
arguments".

Free hint: Hurling insults and innuendo does NOT a "good sound
argument" make.

Hope this helps.

Newsflash. Your radio will still work just fine and you will still be
able to talk to other hams any way you like. That IS what ham radio is
for, after all. Other peoples exam scores will have no effect on your
ability to operate your equipment. Are you gonna tell another ham in
Berlin than you can't talk to him because Jack Sprat in Iowa got his
licence without code? Is your radio experience dependent on some
strangers [who you many never talk to] credentials? If so, then your
ham license was worthless the day you passed your test.

5377. Receiving air traffic on radio alarm clock

Newsgroup: rec.radio.scanner
Date: 2006-10-11 08:48:54 UTC
From: Greg <greg@bolshaw.me.uk>
Message-ID: <1160556534.445594.25820@m7g2000cwm.googlegroups.com>
Source record: 5257

Dear group

I am having an interesting problem that I hope someone can explain to me.

I live in the UK, about 30 miles from Manchester airport. When my radio alarm wakes me in the morning, tuned to 98.5MHz (BBC Radio 1), I sometimes hear air traffic conversations intermittently. These are loud and very clear, as if the plane is flying directly above.

I also own a radio scanner - an Icom IC-R5. However, I have tried to intentionally tune to the Manchester airport frequencies, but only ever get a weak signal. I find this strange as my alarm clock only has a basic wire antenna - far inferior to that of the Icom.

So my questions are: Why am I hearing air traffic on 98.5MHz? and if my radio alarm can receive such a strong signal, why can't I pick it up with my R5?

Regards

Greg Bolshaw

Both terms are used. Some folks use the term "swing" as well, but
that's not exactly a compliment.
>
> >> I am not sure how

> >

> >I think that is your main point.
>
> More than words, but how much more?

Quite a bit, but obviously not as much as a voice. The main point is
that skilled operators get more than 'just the words'.

It's a bit similar to the way that one's perception of the written word
is affected by the font, punctuation, capitalization, etc. Not exactly
the same, but similar.

> I also have to believe that code
> is slower than speech. Not usually a big issue but an issue none the
> less.

Like many things, "it depends".

The raw speed of the spoken word is obviously faster.

But when you really listen to the way most people speak, the speed is
limited by many things. There's a lot of redundancy in the way many
people speak, pauses, repeats, "ums" and "ahs', and little phrases
tossed in while the person thinks of what to say next. Meanwhile, the
skilled Morse Code operator is using abbreviations and other shortcuts
that effectively increase the speed way beyond the raw wpm.

For example, the first response in a voice QSO might go like this:

"VE6QRM, victor-echo-six-quebec-romeo-mike, this is N2EY,
november-two-echo-yankee, thanks for the call. You're five and nine,
five-nine here, good clear signals. I am in Wayne, Pennsylvania, that's
Wayne, whiskey-alpha-yankee-november-echo, Pennsylvania, papa-alpha.
Name here is Jim, john-ida-mike, Jim. How do you copy me?....."

while using Morse Code, the same exchange could be:

"VE6QRM DE N2EY TNX CL BT UR 599 599 GUD SIG IN WAYNE PA WAYNE PA BT OP
JIM JIM BT HW?...."

Same information, two different modes. If the Morse Code ops are
reasonably fast, the time is comparable.

I disagree to a point! Look at the size, weight and performance of HF
rigs that you can carry with you. Is there any HF ham rig that's
SSB-capable that can compete with the Elecraft KX-1?

For fixed-station use, there isn't much size/weight difference, if any.
But when you need to carry the rig and batteries any real distance, the
differences become apparent. This is also when you will find that the
difference in low power performance really matters.

Of course. And that's part of the point: different communications
experiences.
>

I was thinking of the person who performs the music for themselves vs.
listening to a recording.

Either way, it's still a different experience.

Or consider this analogy: It's one thing to drive a car with all the
modern conveniences - power steering, automatic transmission, power
brakes, cruise control, climate control, etc., and doing it on a smooth
straight highway. It's a different experience to drive a car without
all those things, on a winding country road where the driver's skill
makes a big difference.

I think it depends on the amateur's situation. I know plenty of hams
with small children in the house, or with limited space for a shack,
where the sound issue is a big one. Being able to operate quietly can
be the difference between operating and not operating.

I'm not sure what you mean by "if little or no skill is required, then
it's really not worth pursuing".

> >from hams actually using Morse Code.
>
> Perhaps the typical ages of people who prefer code could be a factor.
> It does tend to be considerably older people who prefer code.

I disagree - for two reasons!

First I have found amateurs of all ages who are interested in Morse
Code. I have found that young people are interested *if* Morse Code is
presented correctly.

Some say that, in the modern world, young people who grew up with cell
phones and the internet aren't going to sit still for something like
Morse Code - or amateur radio. And many won't.

However, the very fact that Morse Code is unusual is a big attraction
to some of them - *because* it's so different and unusual. They've seen
voice comms - they all have cellphones! Typing on a keyboard and
reading a screen is something they've seen since they were babies. But

Morse Code is completely different. That's what draws many young people
- just look at the acceptance of the Harry Potter books.

The second reason is that the 'bad behavior' of amateurs on the air
doesn't seem to decrease with age. In fact, it may be the opposite!

One of the worst offenders here in the USA was a Californian named Jack
Gerritsen (ex-KG6IRO). He was found guilty of multiple repeated
offenses, all of which involved on-air behavior like jamming, not
'technical' violations. His bad behavior started on the ham bands but
spread to public service bands as well, giving amateur radio a black
eye. Enforcement efforts up to revoking his license didn't stop him.
The guy was totally out of control, a real problem case. So now he is
going to prison for seven years and has to pay a fairly serious fine
($21,000US, IIRC).

Gerritsen used only voice modes. He is now 70.

> >many children the parents have in school. Is public school a government
> >handout to people with lots of kids?

I don't know how Canadian public education is funded, but I suspect
that it's not that much different than in the USA - at least to the

extent that parents don't pay the full amount, nor does the tax level
increase with the number of children in school.

Is public education a government handout to people with several
children?

> >Or how about tax deductions? Are they a form of government handout? If

> deduction here in Canada. That could be considered a handout that
> Americans enjoy, something Canadians can't enjoy.

Exactly - if one uses the term "handout". A lot of US homeowners would
say that they 'deserve' the tax deduction.

I would say that the USA uses tax policy as a form of social
engineering. By making mortgage and home-equity interest count as a tax
deduction, the government is supporting home ownership over renting.

> Also, Canada is the
> second highest taxed nation in the world.

Really? Who is #1 - Sweden?

> Renters get a wee bit of a
> break in some provinces but not here in Alberta, Canada's "Texas".
>
> >Not trying to be argumentative, just trying to get a clear idea of what
> >is a handout and what isn't.

One person's handout is another's entitlement.

One more "handout": some (not all) Social Security benefits. Most
Americans make payments into Social Security all their working lives.
Some never collect a penny, because they die young.

But if a person receiving Social Security benefits lives long enough,
they will eventually receive more in benefits than they paid into the
system - including reasonable interest.

Is that a "handout"?

> lot. I guess you can never go back.

(sigh)

For many years there was a landmark ham tower near here. Custom rotating steel pole, over 100 feet high, with multiple HF Yagis and a full size 2 element 80/75 meter quad. (That's not a typo). All on a typical suburban lot of less than an acre....

It was built by one ham, and when he passed away another one bought the place. But when the second ham passed, the big tower and antennas needed serious work and nobody stepped up to take on the task.

So the tower is all gone and the house is like all the others in the area...

But some things can be preserved - values, skills, culture. Even if the people and places change.

Image response: 98.5 + 2X(10.7)= 119.9 MHz.

No clue as to why the R5 does not pick it up. Are you listening in AM mode?

In know strictly speaking the 91 ad is not a scanner.
But is is an extremely cool DIGITAL ham radio with loads of scanning
features and over 1000 memories.
So I think it qualifies.
I have created a new less uptight Yahoo group devoted to this cool
radio so if you are interested come join us at
http://groups.yahoo.com/group/IC91AD
Enjoy.

Message-ID: <GRbXg.7946$Y24.7271@newsread4.news.pas.earthlink.net>
Source record: 5263

I don't have a BC-296D, and don't have a VHF trunked system within range, but I walked through the procedure on my BC796D. Your scanner may be similar.

First off, before bothering with the trunking setup, verify that you have the right freqs and there's a repeater near enough to hear. Program the freqs as if they were conventional channels, and scan them. One of them should carry a continuous data transmission. Lock that one out, and continue scanning the others. If you hear voice traffic, good. Erase the channels you have just entered.

Decide which bank to put the trunked system into. The scanner will work perfectly well if you have conventional channels in the same bank, but it's best to avoid that. Otherwise, you will have to individually lock out the conventional channels when you want to hear the trunked system only.

Press MENU, select SCAN OPTION, TRUNK, BANK 1 (or whatever bank you decided on), ENTER.

Select TRUNK TYPE, ON, TYPE2/P25 VHF. (not TYPE2/P25 UHF !)

The scanner will ask you to SELECT BASE CONF, and the default choice will be BASE CONFIG 1. That's ok, so hit ENTER.

BASE CONFIG sets up some values that the scanner needs to know in order to decode the control channel and jump to the correct voice frequency. It will ask you for base frequency, spacing (my scanner calls it SPACE FREQ), and channel offset. Some of the defaults will probably be correct as-is. When you're done, the scanner will ask for BASE CONFIG 2. If desired, you could enter a second set of base freq, spacing, and channel offset here. But that's not applicable to the system you asked about, so you're done with base config. Press MENU to get back to the previous menu.

Actually, you'll have to press MENU several times to get past the stuff you've already entered. When you see the menu with TRUNK CHANNEL as one of its choices, select that.

The scanner asks for the CHANNEL NO, but the "channel" it wants is the storage location in the scanner, not the frequency itself. The default will be the first channel in the bank. If that's ok, press ENTER. Then you come to the menu for entering the freq. Input the first frequency on your list. The STEPS selection on the menu can be left alone unless you notice the scanner changes the freq after you enter it. In that case, STEPS has to be changed to some smaller value.

Input all the frequencies in this manner. The order isn't important, and it's not necessary to make any distinction between voice channels, primary control channels, and alternate control channels. The scanner will figure out what's what.

That should do it. There are other selections on the trunking menu, but they aren't necessary to get started monitoring the system.

Recheck your settings if there's a problem. It's *very* easy to make a mistake when setting up a trunked system. My first attempt was with a Radio Shack PRO-95. The display flickered like mad and I got no audio. I thought, oh no, the system's encrypted. It took awhile to discover that just one number was wrong in my base config. Later, after I got a Bearcat scanner, I programmed it with that same trunked system and again botched the job! But this time I was a lot smarter and immediately checked the setup and caught the mistake.

Because odds are the signal you are receiving is an image,
try 2 x 10.7 (IF frequency for most FM receivers) +98.5, or 21.4 +98.5
=119.9 Mhz, which is right smack in the middle of the VHF air band.

I don't know if we'll get Mad right away but it's clear the FCC and the
ARRL want to drive all good hams out of the service. Little by little
they'll take away the non-phone portions of the bands and hand it over to
the phone users. Like a frog in a pot of water that's raised to boiling
point, one day us real hams will find we have to place to communicate on
the ham bands that doesn't sound like Citizens Band.

I emailed President Bush he should kick out all the Bill Clinton Liberals in the FCC after he got elected, but he didn't. I can't blame him though because he choose to tackle the terrorist mess Bill Clintoon left the country instead. I feel a lot safer now than I did under Clinton, and the economy is better too.

I just wish all you people would take a stand against dumbing things down any further. If it continues, it going to make hams irrelevant and our bands will sound like CB.

I'm sorry Opus, but I refuse to lie. You did get a hand-out, and you're
Lazy because you refuse to learn CW to 20wpm, and too lazy to to use it.
You don't want to be a good capable communicator in every way. That's just
how it is. I'm sorry if the truth seems like an insult. You're right
about one thing, I spelled Kanada wrong, I meant to type KKKanaduh. Eh.

Are you ever capable of telling the truth?
My 1957 ARRL License Manual contains 279
Extra questions in 25 pages. My 2000 ARRL
Extra License Manual contains 439 questions
and 350 pages just for the Extra exam.

Tell me right now what "handout" I have received. Back up your "good
sound arguments" or forever be a PROVEN liar!

You have lied and have been caught. You can't wiggle out of it.

Once again..you are a proven liar and a fool.

You are a disgrace to the amateur radio community.

> That should do it. There are other selections on the trunking menu,
> but they aren't necessary to get started monitoring the system.

Oops, forgot to mention something. There are two different modes for scanning trunked systems: ID Scan and ID Search. In ID Scan, only the talkgroups you have programmed into the scanner (via the menu mentioned above) are heard. If you're getting no voice from the trunked system, that could be the reason.

In ID Search, all talkgroups are heard.

Well, sort of. In either mode, the talkgroups you have locked out are ignored. The trunking menu has a selection to display the list of locked out talkgroups, where you can remove any desired talkgroup from the list or clear the whole list in a single button push.

The display will show which mode is in effect. To switch modes, press the SEARCH or SCAN button while the scanner is on the trunked system (either outputting voice or simply checking it for traffic).

All the above is true for the BC796D. I'm guessing your scanner is similar.

That's what has always cracked me up about CB WADIO cops. Why do they
attack others on the internet when they should be cleaning up the 11 meter
airwaves in their home towns. What a bunch of Loons.

When you sit down at a VE test session the number of questions you have to
answer over-all to be a Tech, General, or Extra class is less than it used to
be and that's not including the questions lost when CW was dumbed down.

Everyone that desires to be a good ham and valuable asset to the radio
service and to their country do.

Now how's your CW practice coming along? Are you practicing or did you
decide to pack it in and just talk on a mic like other lazy KKKanadians.
Eh?

KKKanadian licenses are all hand-outs now, just like your health care system, but that's not your fault and I don't blame you for it. Still, if you want to be a real ham you might want to get your code speed up so you can communicate with other real hams. We'd love communicating with ya.

Your blunt refusal to back up anything you claim simply proves to the
world what kind of loser you are. Can you deduct your mortgage
interest from your income tax? You can? Nice handout because I can't.

Welcome to the killfile, you pathetic little turd, along with the rest
of the little trolls hiding under bridges.

You're depriving a village somewhere of an idiot.

"Slow Code" does not know what code speed "Opus" can do. He simply
assumes.

Note that we do not know "Slow Code's" code speed, either.

Opus, you are making a simple but common logical mistake: You are
taking "Slow Code" seriously.

sprog is a simple Unix utility for programming Uniden Bearcat scanners.
It is primarily intended as a ``batch processor", but it can also be
used interactively. It supports at least the following scanner models:

American: BC780XLT BC785D BC796D BC250D BC296D
European: UBC780XLT UBC785XLT UBC3300XLT

URL: http://hamradio.sm5sxl.net

Ok, Mats. Sounds interesting, but what does "SPROG" stand for??

Cheers

Brian

A comparison between a poor speaker and a skilled
radiotelegrapher is worthy HOW? To shine up the
"skilled radiotelegrapher?" [of course...]

Compare a good speaker and a poor, unskilled radio-
telegrapher's sending and speech becomes way, way
faster.

>> With todays electronics, size and weight really aren't much of an

>SSB-capable that can compete with the Elecraft KX-1?

AN/PRC-104...back-pack HF SSB transceiver, operational
since 1984. Built by (then) Hughes Aircraft Ground
Systems (Hughes purchased by Raytheon).

For civilian-only, try the SGC 2020 SSB HF transceiver
used by private boat owners as well as hams.

>For fixed-station use, there isn't much size/weight difference, if any.
>But when you need to carry the rig and batteries any real distance, the
>differences become apparent. This is also when you will find that the
>difference in low power performance really matters.

The PRC-104 has an integral automatic antenna matching
package (to the right of the transceiver itself). This
insures that the manpack set's whip antenna is always
tuned for optimum radiated transmission power.

SGC has several antenna autotuner models available;
separate equipments.

>Or consider this analogy: It's one thing to drive a car with all the

>all those things, on a winding country road where the driver's skill
>makes a big difference.

You have much experience on "winding country roads?" :-)

[of course you do, you are an amateur extra morseman...]

Are you advocating "no-frills" personal vehicles? Why?

I learned to drive in a 1939 Ford, NO automatic trans-
mission, NO power steering, NO power brakes, No cruise
control, NO "climate control" other than the standard
heater. Training ground was an abandoned army camp, one
which DID have a few "winding (dirt) roads." If you
think for one minute that I would give up a nice,
comfortable, well-equipped 2005 Chevy Malibu MAXX just
to "rough it" for SOMEONE ELSE'S IDEA of what constitutes
"good driving," you've got your head up your ass.

Having earned my Army driving license, I will personally
challenge you to a Jeep gymkhana (Jeep circa 1940s-1960s)
at everything from "smooth straight highways" through
"winding country roads" on to OFF-ROAD ANYTHING. I will
WIN. Been there, did that, got T-shirts, etc.

That standard issue Jeep had NO amenities except for the
post-1950 winch and cable over the front bumper. "Climate
control" was whatever the climate was outside. The "power
transmission" was a couple gear shifts operated by arm
strength and experienced clutch operation. Ptui.

HOW MANY personal vehicles have YOU DESIGNED and BUILT?
Include auto kits if you need to.

HOW MANY thousands of miles have YOU driven? Over "winding
country roads?" [I don't think so unless you count the
old driveway to the Doylestown Barn Cinema...] I've driven
the VERY winding country road (rough surface) to a Wyoming
working ranch (cattle brand registered in Wyoming is "B-1
Bomber") from/to highway.

>to some of them - *because* it's so different and unusual. They've seen
>voice comms - they all have cellphones! Typing on a keyboard and
>reading a screen is something they've seen since they were babies.

One in three Americans has a cell phone. Census Bureau said
so in a public statement in 2004.

Back in the late 1940s - a time well before cell phones, personal
computers, with (mostly) only sound broadcasting - there was NO
great "novelty" or "interest" in morse code communications. Been
there, seen that, see no difference now.

> But
>Morse Code is completely different. That's what draws many young people
>- just look at the acceptance of the Harry Potter books.

So, write the author of the "Harry Potter" series and have
her (J. K. Rowling) "introduce" morse code as "magic." :-)

>But some things can be preserved - values, skills, culture. Even if the
>people and places change.

Preservation of the Past is the job of MUSEUMS.

Why do you insist on keeping a "living museum" in amateur
radio through federal license testing for morse code in
only AMATEUR radio?

YOU had to test for it so everyone else has to...

Fraternal order HAZING having NO tangible value
except to amuse those ALREADY tested for code.

to get the hole fix so i am asking for donations to help with the cost since i dont have
insurance
so if you have a paypal account please look into your heart and donate a dollar or two my
paypal
emial is mcollins7373@msn.com i need around 20,000 dollars usd to have the surgery done.
This is my
last resort for money i have tried goverment agencies family and friends and to my
dissapointment
nothing happened SO PLEASE I NEED HELP thank you so much mike collins
---

If you were born with a hole in your heart you wouldnt be posting this
message, you'd be dead. Now if you are talking about an internal hole Im
just curious if you could give us all the medical name for this condition.
I know what the medical name is because Im in the field, just curious if
you know what it is. Anybody who has this condition knows exactly what
its called. Also wondering if you have checked out the nearest medical
college. Most medical universities will do this for little or no charge,
since you "will" be a guinea pig so to speak, but its all suppervised by
long term cardiac sprcialists, and as a whole do an excellent job. By the
way, dont know where you got the 20,000$ figure but a relatively simple
CABG or coronary arterial bypass graft will run 3-4x's that amount, and the
surgery you are talking about is much more complex than that.
Awaiting your reply.

Listen to the way *most people* speak, Len. There's a lot of redundancy
in the way many
people speak, pauses, repeats, "ums" and "ahs', and little phrases
tossed in while the person thinks of what to say next.

> Compare a good speaker and a poor, unskilled radio-
> telegrapher's sending and speech becomes way, way

So? Most people don't speak like they're reading a script.

> Systems (Hughes purchased by Raytheon).

Let's see...

The AN/PRC-104 weighs at least 14 pounds, according to the literature.
Some writeups say as much as 28 pounds. It's a pretty big set - you

don't just slip it in a pocket.

How much do the batteries weigh? How long will the set will run on one set of batteries?

Battery voltage is nominally 24 volts, and the thing draws about 350 mA on *receive*. So you can't just hook it to a 12 volts source, and the power consumption on receive is about 8 watts.

Now the biggie: How much does one cost new? I found some for $2500 - reconditioned.

> For civilian-only, try the SGC 2020 SSB HF transceiver
> used by private boat owners as well as hams.

Weighs 8 pounds without batteries. Not as big as a PRC-104 but still a lot bigger than a KX-1. Draws over 300 mA on receive, but runs on 12 volts. Costs $800 new, last time I looked. Tuner and such are extra.

The KX-1 weighs under a pound and is much smaller and lighter. Receive current is less than 50 mA. Costs $299 new.

So the rigs that "compete" with the KX-1 cost a lot more money (twice to ten times the price or more), are far larger and heavier (8 to 20 times the weight or more), and the battery life is much less.

Thanks for proving my point, Len.

The KX1 can be equipped with an ATU. Costs a lot less, weighs a lot less, takes up a lot less space.
>
> SGC has several antenna autotuner models available;

All weigh more, use more power, cost more money.

> You have much experience on "winding country roads?" :-)

Yes. Do you?

> [of course you do, you are an amateur extra morseman...]
>
> Are you advocating "no-frills" personal vehicles? Why?

Why not?

> I learned to drive in a 1939 Ford, NO automatic trans-

Sounds like the car I learned to drive in.

> Training ground was an abandoned army camp, one

It's not about *you*, Len.

> Having earned my Army driving license, I will personally
> challenge you to a Jeep gymkhana (Jeep circa 1940s-1960s)
> at everything from "smooth straight highways" through
> "winding country roads" on to OFF-ROAD ANYTHING.

Why would you give up a nice, comfortable, well-equipped 2005 Chevy
Malibu MAXX just
to "rough it", Len?

> I will WIN.

Maybe. Maybe not. You don't really know, you're just bragging because
you know it won't happen.

> Been there, did that, got T-shirts, etc.

That doesn't mean you would win.

> That standard issue Jeep had NO amenities except for the

> transmission" was a couple gear shifts operated by arm
> strength and experienced clutch operation. Ptui.

What's your point - that you spit at Jeeps?

> HOW MANY personal vehicles have YOU DESIGNED and BUILT?
> Include auto kits if you need to.

What does it matter? I could tell you about the time I took two junker
cars and made one good one out of them, but you'd find fault with that,
somehow.

> HOW MANY thousands of miles have YOU driven?

Gosh, Len, I don't really know. Probably more than you, though.

> Over "winding
> country roads?"

Enough.

> [I don't think so unless you count the
> old driveway to the Doylestown Barn Cinema...] I've driven
> the VERY winding country road (rough surface) to a Wyoming
> working ranch (cattle brand registered in Wyoming is "B-1
> Bomber") from/to highway.

What does that have to do with anything, Len?
>

>
> Unquantified numbers. You are waffling on your emotional
> reasons.

"Amateur" is derived from the Latin word for "love". Means to do
something for the love of the thing alone. Emotional reasons, IOW.

The fact is that there are plenty of young people who like Morse Code
and learn it readily. I think that's one reason you want an age limit
for an amateur radio license - so those code-skilled young folks can't
get a license until they're 14.

> >However, the very fact that Morse Code is unusual is a big attraction
> >to some of them - *because* it's so different and unusual. They've seen

So what?

When I was a teenager, practically everyone had a telephone. Why should
anyone have a ham rig at home when they can just talk on the telephone?

> Back in the late 1940s - a time well before cell phones, personal
> computers, with (mostly) only sound broadcasting - there was NO
> great "novelty" or "interest" in morse code communications.

Sure there was. Ham radio was growing by leaps and bounds then. You
were not part of it.

> Been
> there, seen that, see no difference now.

IOW, nobody should do what *you* don't enjoy.

> > But
> >Morse Code is completely different. That's what draws many young people

Preservation of values, skills and culture is everyone's job.

> Why do you insist on keeping a "living museum" in amateur
> radio through federal license testing for morse code in
> only AMATEUR radio?

It's not a living museum.

> YOU had to test for it so everyone else has to...

Nope. Morse Code should be a license requirement because amateurs use it. The skill is part of being a qualified radio amateur. Simple as that.

> Fraternal order HAZING having NO tangible value
> except to amuse those ALREADY tested for code.

It's not about hazing, Len. It's about being qualified. You're not qualified.

Thomasville Police are now dispatched by Davidson County 911 Center in
Lexington.

Thomasville borders on High Point and Guilford County NC Also, it is near
Greensboro and Kernersville, NC.
There are units from Thomasville that roam into these other 800 MHz systems.
I believe there were talk group numbering incompatibilities between the
various systems that required talk groups to be renumbered.
Check your talk group numbers before you change RF frequencies.

Also, Thomasville has licenses (sanctions?? coordinations??, I don't know
what the proper term is) from APCO/NPSPAC for TWO different 800 MHz
systems.

As the FCC database just shows licensed frquencies,
This system data does not show up in the FCC data base.

• 2.815 External radio frequency power amplifiers.

* * * * *

(b) No person shall manufacture, sell or lease, offer for sale or lease (including advertising for sale or lease) or import, ship or distribute for the purpose of selling or leasing or offering for sale or lease, any external radio frequency power amplifier capable of operation on any frequency or frequencies below 144 MHz unless the amplifier has received a grant of certification in accordance with subpart J of this part and other relevant parts of this chapter. These amplifiers shall comply with the following:

(1) The external radio frequency power amplifier shall not be capable of amplification in the frequency band 26-28 MHz.

(2) The amplifier shall not be capable of easy modification to permit its use as an amplifier in the frequency band 26-28 MHz.

(3) No more than 10 external radio frequency power amplifiers may be constructed for evaluation purposes in preparation for the submission of an

application for a grant of certification.

(4) If the external radio frequency power amplifier is intended for operation in the Amateur Radio Service under Part 97 of this Part, the requirements of Sections 97.315 and 97.317 of this chapter shall be met.

Here's a reality check.

On 80m the rest of the world, except Canada, has always had phone down to 3600 as far back as I can remember, and we are merely joining them. The VE phone ops still have to stay above 3700, I think.

On 40m the international bandplans have phone down to 7040 except in Region 3 where it is 7030. The only countries that I know of where you can't use phone down to 7040 are Mexico (7050) and the USA (now 7125 after the change).

US hams outside Region 2 have had phone down to 7075 for years, and I am on record as suggesting that we should have that in the mainland US. It's hard to see why not when you actually look at what the rest of the world is doing.

At the same time countries in Region 1 aren't supposed to get access to 7100-7200 until the middle of 2007. Many of them already have, but for those that haven't, a phone subband that goes down to 7125 still doesn't even reach the top edge of their whole band. Doubtless some of them will be late in implementing the extra spectrum, so forced split working will drag on a while longer. How would you like it if your 40m CW allocation were on frequencies that were off limits to the DX?

On 20m and 15m we still have 50 kHz less phone on each band than all other countries. Although General and Advanced got bigger phone subbands on 15 (as well as 80 and 40), the bottom edge of phone didn't move on 15 (or 20).

Nonsense. The CW bands are not exactly
overcrowded (or have you been listening there).

Alun,

With all due respect, your signature line kind of reveals your agenda. We aren't talking about Extra's who don't use CW/rtty/data. The folks we're talking about here are Generals, the most populous HF license class in the US. On 75m they have just had their CW/rtty/data spectrum reduced by 2/3rds. That's outrageous!

That' may be true in theory, but not in practice. You can't use CW on frequencies which your license class prohibits. Generals just lost 150kHz of prime CW/rtty/data spectrum from 3.6 to 3.75MHz, the other parts of the band their license class doesn't allow. So much for "CW everywhere in band".

No, the rules concerning CW use have not changed. Those rules have never allowed a General to transmit CW (or anything else) in frequencies reserved for Extra and Advanced. In the case we're discussing the 150kHz from 3600 to 3750 have now been reserved for Extra and Advanced, and are now off limits to General who previously could transmit CW/rtty/data in that segment.

>
> 73, de Hans, K0HB

Here, I'll have a go.

When the new changes go into effect:

Generals gain 50 kHz of 'phone but lose 150 kHz of cw/rtty (1:3 ratio
of gained/lost bandspace)
Advanceds gain 75 kHz of 'phone but lose 100 kHz of cw/rtty (3:4 ratio)
Extras gain 150 kHz of 'phone but lose 150 kHz of cw/rtty (1:1)
Novices and codetested Techs gain 75 kHz in one part of the band but
lose 75 kHz elsewhere (3:2)

Do you see the disparity, particularly for Generals? Why should it
exist? What did Generals do to merit losing so much spectrum?

Why can't the low end of 75 be moved 50 kHz instead of 150 kHz, and the
lower limit of each 'phone subband moved down 50 kHz? Then, each
license class would gain as many kHz of 'phone as they lose CW/rtty.
1:1 ratio for everyone.

If you don't think 50 kHz is enough, make it 75 kHz. The point is that
the most populous license class on the band *loses* the most total kHz!
The ratio is 1 kHz gained for 3 kHz lost - why?

How much will 3600-3700 be used when it is Extra-only?

One more question:

Why isn't rtty/data - particularly wider-than-1 kHz-data - allowed in
the 'phone bands? Or rather, why should that restriction remain,

particularly on a band that will be 4:1 phone/narrow modes? How are those modes any different from SSTV or CW in terms of compatibility?

It seems to me that a combination voice-data mode would have all sorts of uses in amateur radio. Imagine being in QSO with someone on SSB, and being able to send a data file to them without having to QSY. In fact, with a properly-designed rig, the data could be sent simultaneously on the opposite sideband, or on the suppressed-carrier frequency if a mode like PSK31 were used for data. Yet under current rules none of that is allowed, and the 80/75 bandspace where data modes will be allowed for *any* class of license will decrease from 250 kHz to 100 kHz - why?

73 de Jim, N2EY

hmm they lost acutals hz did they? is that what you are tlaking around
or did things just get shuffed around same number hz justchanging the
mode avalable

in the later I say where the beef if they lose acutaul hz for any use
(total number for all modes then I have to wonder

Keep in mind that the US has more hams than the entire rest of the world combined if you don't include Japan in that count. So there is the potential for problems if our voice allocations go too low. Our regulations need to take that into account. As far as 40m goes, it will be a better solution if they can move the broadcasters out and make it a worldwide ham allocation up to 7.300. If the rest of the world could go to 7.3, that would open up a tremendous amount of space for other countries.

Since 1955 for international civil aviation. It's taken
from the NATO approved phonetic alphabet which came out
earlier the same year. I remember it well since I had to
learn the "new" phonetic alphabet in a hurry while in the
Army then. :-)

>> the legs of a three leg stool.
>
>Dear Slow, air traffic controllers don't use Morris Code, and they
>communicate with foreign speakers JUST FINE!

Ever since 1955 the worldwide common language for civil
aviation communications on airways has been English
spoken as well as (now) data. That includes pilots as
well as controllers, even in and over their native
country; a non-English speaking country MAY use their
native language but the civil airways can have many
nations' aircraft in it.

Blowcode is just another troll who has his head up his
ass in regards to radio communications. That head just
hasn't been aware of what happened in radio for a half
century.

The ITU didn't "just remove" anything. The ITU-R made
the code test for an amateur license with below-30-MHz
privileges OPTIONAL to each administration. In 2003.
THREE years ago, not "just now." :-)

Alun you've been dumping this old whine into the groups for years now
and it's long since worn out. Not that it needs to be explained to you
again but the FCC is *protecting* the dx from the hordes of Yanks who
would obliterate the dx if we were allowed to run SSB below 7100.

Dee also explaned it in her immediately preceeding post, read it, give
us a break and internalize it this time then go find something new to
grouse about for the next five years. Maybe by then your chums in the
UK will be able to transceive with you above 7125.

> How would you like it if your 40m CW allocation were on
> frequencies that were off limits to the DX?

The difference is all about one SSB signal taking up the same amout of
spectrum space as 5-10 CW signals.

> On 20m and 15m we still have 50 kHz less phone on each band than all other

> The ratio is 1 kHz gained for 3 kHz lost - why?

The error is attaching the same value to General cw/rtty space per Khz
as you're attaching to their phone space per Khz. Which it is not.

Unless I'm 'way off the mark the vast majority of Generals won't miss
the cw/rtty space at all and they'll be delighted with their new phone
space. Note the lack of Generals expressing any opinions on the
subject. If they're not in here complaining about losing cw/rtty space
why should us OF Extras care about the subject one way or the other?

> How much will 3600-3700 be used when it is Extra-only?

We'll find out soon enough won't we? Then again the new 3600 band edge
could well be just a placeholder for "things to come" rather than just
another conventional expansion of phone space. This R&O has too many
oddities in it like this one for me to believe that the FCC is finished
"streamlining the service". Maybe it's the result of the ARRLs
pestering the FCC to publish a response to the NPRMs. So the FCC did
and damn the torpedoes so this is what we got. For now. Bought the FCC
more time to quietly come up with their "real" omnibus NPRM/R&O?

Maybe so!

Note how, in more than one Report and Order, FCC has pointed out how
little testing it takes to upgrade to Extra. FCC has repeatedly turned
down all proposals that would have granted instant upgrades, like
making all Advanceds into Extras. Maybe it's time to take the hint.

> > Why can't the low end of 75 be moved 50 kHz instead of 150 kHz, and the

I think we're on to the same idea.

I wonder what FCC really thinks of us hams. Sure, they say certain
things - because they have to. But consider what amateur radio may look
like to at least some of them:

We have huge amounts of spectrum set aside for us by international
treaty, and we yelp at the loss of even small amounts of it to other
services.We don't generate any real revenue, yet we keep asking for
more enforcement.

Users of other services complain about interference from us (even when
it's not our fault) and we complain about interference from power
lines, appliances, etc., that don't seem to bother anybody else. We
raise holy heck over new technologies like BPL, even though the
state-of-the-art experts who design the new technologies say we
amateurs are wrong.

And now the big one:

We amateurs send in way too many petitions/proposals to FCC, and then
cannot agree about what we really want.

I think what FCC expects is for us hams to argue amongst ourselves and
work out what rules we really want *before* sending in any
petitions/proposals. Then, when a proposal is sent in and FCC gives it
an RM number, the comments are overwhelmingly positive and FCC's job is
easy.

Look at the recent "bandwidth" proposals. ARRL sends in one, a group called CTT sends in another. Both are given RM numbers and very short comment periods. Both get a ton of comments - overwhelmingly opposed! CTT is opposed even more than ARRL (something like 7 or 8 to 1 against for both of them).

Could be that the folks at FCC who have to go through all that are angry at having to deal with it? Two groups who both claim to know what's best for amateur radio sent in proposals that cost a lot of FCC resources. But neither group gets widespread amateur support *first*, so the comments are an overwhelming "NO!" to both proposals.

The Morse Code test issue is even more of a mess. Treaty changes, FCC gets *18* proposals! Huh? Some are poles apart while others are virtually identical. They gotta deal with 18 RMs and comments on all of them. One self-proclaimed "PROFESSIONAL", who isn't even a ham and doesn't intend to be one, sends them hundreds of pages of comments and reply comments, which they have to wade through.

Now look at what Industry Canada dealt with. The national society worked out a compromise on the issue, got consensus from its members and the general Canadian amateur radio community, *then* made a proposal - complete with detailed poll results. Proposal was supported in comments and sailed right through. RAC made IC's work easy.

When's the last time *any* proposal sent to FCC by hams (not just ARRL) got widespread support in the comments?

TrunkPCR update 0.81.203 Now Available for Downloading from the homepage:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html
Oct 06,2006 - Fixed: Hunt on Data Loss using PCR-2500 in Dual Rcvr Mode.
Oct 06,2006 - -----: Recovery Rate info now shown in Dual Rcvr when selected
(PCR-2500 Only).
Oct 06,2006 - -----: Changed how Frequency is Set when on Voice Channel
(PCR-2500 Only).
Oct 06,2006 - -----: Dual Rcvr now remembers Last Channel used (PCR-2500
Only).
Oct 07,2006 - Fixed: If Mode on Channel was saved as P25, was defaulting to
WFM when loaded.
Oct 10,2006 - Fixed: Changed Weather Alert Frequencies for PCR-1500/2500.
Oct 14,2006 - Fixed: Editing Group ID Descriptions in Trunk ID Editor
(Again...).
Oct 15,2006 - Added: TRAIN Canceller Editor for PCR-1500/2500.
Oct 16,2006 - Added: DV and P25 Mode Selection in Search Limit Editor for
PCR-2500.
Version 0.81.203 Released 10/16/2006

Regards,
Jay

It took me about 7 weeks and lots of hours to get to about 10 words per
minute. I couldn't get past that, so I got the consolation prize...
Technician.

Im sure the numbers would look even wose if the licenses expired sooner.
Most of the new hams I know lose interest in a couple of years, long befor
the licence expires.

Those darned new hams. They never should have been licensured in the
first place. Didn't have the ooomph to get licensed when the tests
were harder so they weren't really that innerested in the first place.
Didn't show the proper dedication.

The "relationship" between ham radio and the FCC is no different
overall than the way the FAA gets pounded by the recreational aviation
crowd and the Department of the Interior gets Excedrin headaches from
the hiking, camping, hunting and fishing bunch. The ongoing regulatory
brawls between the skimobile/ATV users vs. the preservationists make
our little code test dispute look laughable in comparison. When it's
all said and done the regulatory agencies have been instructed by law
and funded by Congress to deal with the sometimes goofy issues we the
public stick them with - since it's *us* who are paying them to do it.

No way. The FCC staffers who deal with these things don't live in a vacuum, they're not stupid and they know bullshit when it lands in their inboxes and they know how to handle it. By now they've long since gotten wise to Anderson's childish antics and his "comments" just get rubber-stamped "READ" and tossed into the outbox without further ado. He's not having any impact at all at the FCC and he knows it, he's trolling for folk like you who get their knickers in a twist over his nonsense.

Back when I worked in Canada for a number of months and it was a real eye-opener. One big lesson I learned is that Yanks in general don't understand that in many respects Canada is culturally quite different from the U.S. even though the language is functionally identical and the border is wide open by international standards. In a nutshell my take has been that Canadians are far more likely to come to a consensus than we are by their general nature. So are most of the Europeans. We're the global odd jobs, we're notorious all over the planet for preferring food fights to regulatory peace and quiet. We is what we is, the old "herding cats" syndrome in play.

First off... this is coming from General... who was Grandfathered...

I know many people who are not Extras and who have not passed the 20wpm
that respect those OM very much. I love to sit at field day and watch
in awe at a CW operator. Just because I can't do it doesn't mean I
don't respect it. And there are many other people like that. So please
dont lump all of us "meaningless generals" into one please.

HI All,

What is the best programming software for Beacat Scanners these days?

I have a BC 898T and a BC245XLT that I can't seem to figure out the trunktracker programming on.

So, I was told a scanner programming software will do it for me via a serial connection my computer.

Who has had good results with such software and where can I locate it.

Thanks in advance,
Mike - FL

Thanks!

But consider that you could probably do it, too.

Nobody is born knowing Morse Code. Those who know it, learned it and
kept on learning it. They all started from zero. Sure, some people have
more innate skill/talent than others, but that's just one factor. Most
people learn to understand speech at more than 100 wpm - is 20 wpm code
more complex than that?

> And there are many other people like that. So please
> dont lump all of us "meaningless generals" into one please.

I'll go with Mark and say it is a current RRAPer...a pro-coder who
is wrapped too tight...either Jimmie Noserve or that Waffen SS guy.

Sure - but the results may be very different. I doubt FCC is too
worried about the amateur community as "the public". They're too busy
dealing with wardrobe malfunctions and Howard Stern wannabes.

There's no modern-day equivalent of K7UGA to put a bit of a scare into
'em, though.

> > One self-proclaimed "PROFESSIONAL", who isn't even a ham and

Agreed.

> By now they've long since
> gotten wise to Anderson's childish antics and his "comments" just get
> rubber-stamped "READ" and tossed into the outbox without further ado.

They gotta accept 'em and read 'em. They don't have to act on them.

> He's not having any impact at all at the FCC and he knows it, he's
> trolling for folk like you who get their knickers in a twist over his
> nonsense.

I doubt he knows it.

As for knickers, it's not mine that are in a twist.

FCC could have just dropped Element 1 in August 2003. Memorandum Report
and Order, coupla paragraphs and done. All they'd have to do is say
that the issue was thoroughly discussed before the 2000 restructuring,
and the treaty was the only reason they kept Element 1.

But they didn't, and now it's almost 3-1/2 years later.

Yup.

But that makes no difference when it comes to getting what we want out
of FCC. I think we'd do a lot better to get a consensus *before*
deluging them with proposals and comments, that's all.

But that's a lot of work. You think an outfit like NCI is going to do
all the legwork and compromising to get consensus? Don't hold yer
breath.

It friggen figures the president of the ARRL would say that. They're only interested in selling memberships, they're not interested in the quality of the radio amateur. Ham radio can be like CB for all they care.

That's what happens when something gets dumbed down. It cheapens it, and
people find no value in maintaining or continuing with it.

And you haven't changed a bit either Len. You should be taking part in
the more technical groups and not arguing policy with pro-coders, or are

you hoping to be the second No-Code Extra after Markie?

He's upset because he knows CW makes a real ham, and he can't cut it.
That's OK, I encouraged him to try to learn CW while I could before I
ended up in the killfile.

NEXT!

I was there the first night we were allowed to operate below 3800,
worked an EA. Lotta ticked off VEs, Helluva mess. Lotta fun.

You're almost 40 years late. The precedent was carved in stone as a
result of the Incentive Licensing R&Os of the late 1960s and they just
did it again. I'm not familiar with the 'wayback history of it but
maybe there were similar occurrences before 1950.

> > > I wonder what FCC really thinks of us hams.

That sort of stuff is handled by the upper-level politically sensitive types at the FCC, our fates are crafted by the OET jorneymen. The BPL flap excepted.

>
> They gotta accept 'em and read 'em. They don't have to act on them.

Who audits this process to make sure they all get "equal reads" and consideration? Where's the published policies on the topic? Answer: There ain't neither. You can fill in the rest.

You're the local manager of the FCC group which totes up the comments on ham radio NPRMs, you also have a budget and a calander to manage and you know you gotta plow through the piles of comments in as efficient a maner as you can. Ordinary common sense and business smarts indicate that you'll pass out some informal set of criteria or another about who's comments to spend serious time on and who's to just give a quick scan and toss into the "agree"or "disagree" stacks with all sorts of variations in between. Considering the fact that Anderson's only inputs to the process have been a stream of workload for them from a non-ham bush-leaguer it wouldn't surprise me if they also had a stack for his drivel marked "cranks". Ten second scan, done, flick, into the stack it goes.

> > He's not having any impact at all at the FCC and he knows it, he's

(a) They're toying with us for jollies.
(b) They know it doesn't matter one way or another.
(c) They're internally deadlocked on the subject just like we are.
(d) It'll show up in Omnibus II.

> > We're the global odd jobs, we're notorious all over the planet for

Ya know, The more I read SC's post the more respect I have for SC. He's
right. Trash like "John" and the "retarded no-code wonder" are what
will rid the bands of the ARS.

Maybe Mork should clean up his act and try to behave a little more like
Steve.

John, the truth is if you talked to SC in person you'd drop to your knees trying to kiss his ass. You're a typical welfare ham. Now go play with your little HT, faggot!

The true truth is you have nothing to offer for entertainment by being a
truly malicious asshole. Prove me I am wrong, if you can.

5534. Village Voice 'Planespotting' article -- U-2s, Rendition flights, et al

Newsgroup: rec.radio.scanner
Date: 2006-10-17 19:44:06 UTC
From: PoloHat@gmail.com
Message-ID: <1161114246.903038.64600@m73g2000cwd.googlegroups.com>
Source record: 5114
Cross-posted to: rec.aviation.military,rec.radio.scanner,alt.radio.scanner,rec.aviation.misc

http://villagevoice.com/news/0642,torturetaxi,74732,2.html

The anonymous "Ray" in the article is actually your typical 50 year old San Francisco Bay area 'social activist'/'progressive'/anarchist by the name of Gary Sellani, operator of the lazygranch.com domain and HAM radio call KD6ZXF.

Contact Gary at yahoogroups@lazygranch.com

It's very amusing, based on the subject of the article & his involvement in it, that Gary Sellani wanted to remain anonymous & just be referred to as "Ray." It was easy enough to 'out' Gary Sellani by doing a Google search.

Maybe someone will go hang out near a particular San Ramon Post Office & photograph Gary Sellani's antenna-laden SUV as he stops to check his PO Box & post the photos of him & his vehicle on the internet. Be sure to get a photo of his SUV's tailcod... oops, I mean license plate. Then again, maybe someone has already done this...

Turn-about is fair-play, "Ray!"

Polo

The mind-control, tracking device we've implanted in Gary Sellani's tooth is quite sufficient

The journalism looks kinda dubious... I don't know much about U2's, but
I do know they climb at a 40 to 60 degree angle-- which doesnt match
with what the article and Ray claim.

.

Robesin is absent. Lots of uniques showing up. Maybe we need to run
RRAP through a contest logging program.

Indeed we could dispense with much of the technical qualifications some day. The technical part is basically an attempt to make sure the amatuer is competent enough to operate their equipment in a maner that does not interfere with other services outside of his designated allocation of spectrum, in other words, within FCC regulations. At such a time when all equipment is made idiot proof and all hams use store bought idiot proofed gear we may see this.So far the one experiment at this has failed. You think you have something idiot proof and then guess what, someone makes a better idiot. So I am not worried about requirement of theory going away. As far a CW is concerned to gain the privledges hams have today they had to show they were a national asset. Part of being that asset was our ability to process emergency traffic should the need arrive. At the time CW was needed to accomplish this. It is no longer needed to meet our obligation of service. OF course this begs the question, can we fullfil our obligation. To this I believe we can, but are we really needed. CW has been replaced by other technologies, it would make more sense to require typing skills than CW, an idea I dont think is so bad even though I may have trouble with twenty wpm on a keyboard.

Total agreement here, our obligation of service to to earn our privlegdes
doesnt end with what we have done but with what we have done lately.

The "service" provided by the Amateur Radio Service
is a service provided *by* the federal government
to the citizens who meet the amateur radio licensing
requirements. There is no governmental requirement or
obligation that amateur radio operators render any public
service at all. Amateur radio licensees are not even
required to own a radio.

"Service", in this context, is just an administrative
division of government.

You Know i think we can and general do fufill our service obligation
althought I see wht we wil as More holding the fanks and protecting
the abilty of EMS to do it jobs and leave us to keep the gal looking
for here cat off their backs. I honestly think that much of what the
EMS see as our value in most areas

but typing (with maybe the option of some other test like solderiring
or anttenan making the biggest problem with the CW is IMO the fact it
tries to stamp us the hams out in single mold

which explains the vitriol of the some the ProCoder the Nocoders are
rejecting the mold they fit so well into. I would love to see a system
where there were severlal possible tracks to advance (asumming we stay
with something like the incentive license system the current system
and any likely future of it ivolves tring to make us all the same
which we never were and will be less and less of in the future. Trying
to dicuss my efforts and sucesses and failures with EME ops is like
trying to speak in sancript to crowd speaking latin

I passed the Novice exam in Nov 1986. 5WPM. I'm presently a General,
so I'm fully qualified to work out of band Frenchmen on 6M or on HF.
Maybe they'll even put me in for the ARRL's A-1 Operator Club.

Mike,

I have been using ScanControl by 3D Technologies latest ver. 5.2.3 on my BC296D and is a great program and easy to learn. I believe they offer a free trial download and if you purchase well worth the $$$.

John...

Highly unlikely particulary in cases like Anderson's nonsense *and*
I'll only believe it when I see it. Unless you gots documentation to
the contrary or you've been there yourself.

> What they conclude is another matter.

Yeah, they conclude on sight that they're not gonna actually read his
crap . .

I doubt that there's much (e) involved, they've been patrolling up and down our back road in the RF wilderness for decades and they're quite used to it. Used to us and our level of noisy BS. In any event thee and me are bulletproof, we're 20WPM Extras so I could care less when they bite the bullet and do whatever they're gonna do about the code test.

'Course I thought I was bulletproof in 1967 too when I had a General .
. .

> > > But that makes no difference when it comes to getting what we want out

> long to get anything from FCC.

Eternity is not a particulary long time in gummint buracracies like the FCC. Been there, been part of it.

> and why the result is so unlike what is
> proposed.

. . . "Mother knows best" . . .

Somebody wrote in a post in QRZ.com that they'd been in direct e-mail contact with the FCC about the anomalies and confusion in the R&O and the FCC agreed that the R&O needs more work before it goes to the Register. That'll push implemetation of a cleaned-up version out until God knows when. Reset: Game started over.

I noticed in another of your posts that you didn't understand why the 80M CW band and 75M phone band are called what they are. Or something akin to that. It's an ancient convention which is conceptually useful in a number of ways and is not even close to "numerically rigorous". It's a simplistic way of identifying the ham bands and nothing more.

The real numbers go like this:

3.5 Mhz = 86M
3.75 Mhz = 80M
3.8M hz = 79M
4.0 Mhz = 75M
7.0 Mhz = 42.8M
7.5 Mhz = 40M
14 Mhz = 21.4M
15 Mhz = 20M

. . all I care about is that when I punch the button which sez "80" I hear a lotta beeping going on and when I hit the button marked "75" it's the motormouths at play . .

SNIP

1) You have to understand that the U-2 is a bogey-man to the certain
denizens of the Left

"Gsrsh, Martha, it be a SPYPLANE !!"

No just a very specialized recon aircraft -clearl;y marked as USAF for
many years

2) It sure hurts the story if you have to say, "No just another C-17"

3) Ever since Truman Capote's "In Cold Blood" set the style, the so
called "new Journalsim., wherer authors have been mixing fact with
"what should have heppened" .....well, if we didn't spot a U-2 today,
"Ray" says he has in the past, so I can inject it into the story

"In Cold Blood (1965), his account of a mass murder in Kansas, is what
Capote called a "nonfiction novel," a book that employs the
conventions of fiction to tell a true story. Thanks to this book,
Capote has come to be considered one of the pioneers of a movement that
Tom Wolfe would later call "New Journalism."

New Hams just don't want to modernize, they're lazy and don't want to have to learn anything. I'm a 20 wpm Extra and the code requirement didn't stop me from modernizing beyond a microphone and CW. So don't believe anyone that says CW is killing ham radio. They're just sick, lame or Lazy.

If CW has been replaced by other technologies, why aren't more amateurs doing the modernized modes? It's because they don't want too. Ham radio has been dumbed down and we can't even force hams to use them to be proficient communicators.

CW isn't preventing the modernization of ham radio, Laziness is.

Yer missing the point.

Somebody at FCC reads 'em. That's all.

My guess is that the FCC doesn't even start reading the comments until
after the comments close. Then they sort them by commenter, because
some folks send multiple copies and there's no point reading the same
thing more than once.

Then, I think, somebody goes through them weeding out the obvious
cranks and fakes, as well as the dupes. Also, they probably pile up the
simple "rubber stamp" ones ("I agree with ARRl/NCI/NCVEC").

What's left are the ones that need a bit of serious reading. Much
smaller pile. You think Len's stuff makes it to that pile?

> > What they conclude is another matter.

Today's FCC isn't the FCC of 20-30-40 years ago.

> In any event thee and
> me are bulletproof, we're 20WPM Extras so I could care less when they
> bite the bullet and do whatever they're gonna do about the code test.

Code test is a completely different issue.

I used to think the code test thing was a slam dunk. Maybe it still is.
But the fact that FCC has taken so long so far makes me wonder. For all
we know, they could keep it just because. Or they could do what Canada
did. Or something else.
>
> 'Course I thought I was bulletproof in 1967 too when I had a General .

Roger that! The whole thing may have been a bit of a mind-game. ARRL
gripes, so they put out a messy R&O that makes ARRL look bad.
>
> I noticed in another of your posts that you didn't understand why the

I was asking why FCC treats them as two separate bands in Part 97,
that's all.

Sorry, but I see absolutely NO "obligation to perform
some service [to the nation or community]." That is one
of the myths promulgated by the ARRL and its followers.

The word "service" used by the FCC all throughout Title
47 C.F.R., all Parts, is a regulatory term referring to
a type and kind of radio activity being regulated.
[see Citizens Band Radio SERVICE or Radio Control Radio
SERVICE as two examples in Part 95] Also, as Cecil Moore
mentioned, the government is doing its citizens a service,
NOT the other way around.

If an individual WANTS to VOLUNTARILY perform some service,
then excellent. There is NO "obligation" to do so unless
there is some law requiring it. Personally, I think all
citizens of the USA should do at least one term of Jury
Service. In California there is a state law that eligible
citizens shall serve, for a time and times as stated by
law. [I've done five terms of Jury Service here] Anyone
who WANTS to voluntarily sit in on a court is allowed to
(with some special conditions not permitting certain

trials). Those spectators are NOT obligated to do so.

USA amateur radio service is a VOLUNTARY activity. It is an avocation, not an occupation. In other words it is a HOBBY. It's a fine hobby, tens of thousands of citizens engaged in it. But, it is still a HOBBY. It is NOT "essential" for the good of the nation. It is high time that everyone quit dreaming about imaginary glory of "serving the community" through amateur radio...time to look at what it IS in the real world.

you left out something there is one other type of service to oneself

I do think we are obligated to preform one type of service and
learning something counts

additional in an emergency if we find we can be a of service I'd say
we have a moral duty to serve as humans and citizens and our radios
give ways not avalable to many

another type of real service we can perfrom (although some hams like
Robeson seem unable to do so) is simply one to one diplomacy

I know during the elian Matter I enjyed tlaking abit to few cubans
(helped that I was vsiting florida for part of that it drew an
interesting response from them when I said something like you know if
the case were of people totaly within the USA the father would have to
go the florida himself most likely if he wanted his kid back and
givent he US does not trust the cuban govt...

I'd probably see Incentive Licensing the same way if I was a kid in
your shoes. However you came into ham radio when it was already old
news and were something like 14 years late to the Novice game I played
in in all it's nooks and crannies. You can read about it and talk about
early '50s ham radio it but since you didn't actually live it I
wouldn't expect you to fully appreciate what a huge deal Incentive
Licensing was to my Novice class. It was even more of a kick in the
butt for for the old-timers of those days.

The FCC doesn't play silly games like that. If the guy in QRZ.com has
it right they screwed up a bit and need to tweak the R&O. No relections
on the ARRL one way or the other but the FCC will come out of it a bit
of egg on it's face.

Because historically we've also been treating 80 & 75 as two separate
bands. Convenient ancient custom.

Time to bail away from the trashheads, I'm outta here and back to the
paint, varnish and antenna work.

Hi,
One of the previous posters made a good point in that the radio is not
nearly as valuable as it used to be.
Good luck on your auction however..

Not for any particular individual, anyway.

> That is one
> of the myths promulgated by the ARRL and its followers.

That's a falsehood, Len. ARRL talks about the service provided by
amateur radio, but does not say there is an obligation to do so.

> there is some law requiring it.

Agreed!

However, one of the justifications for the continued existence of the
Amateur Radio Service is the public service performed by radio amateurs
using amateur radio.

> Personally, I think all

> look at what it IS in the real world.

What does that mean?

Amateur Radio does indeed perform public service - voluntarily. That's
a fact, not an opinion.

5581. Re: 2 scanners off of 1 antenna

It is possible.

There will be some loss.

Adding a preamp before a splitter tends to overload the front ends of my
scanners with paging services.

What about a moral obligation?

Suppose I were driving on a winding country road and came upon the
scene of a one-car accident that had occurred only a few minutes before
I arrived.

And suppose the occupants of the car in the accident needed help, and I
had the means to call for help.

Would I not have at least a moral obligation, if not a legal one, to
call for help?

Suppose the only available communication was by Amateur Radio - would I not have at least a moral obligation, if not a legal one, to use Amateur Radio to call for help?

> Personally, I think all
> citizens of the USA should do at least one term of Jury
> Service.

Even those who are not mentally or physically competent to do so? Would you want to be judged by a jury composed of the mentally ill? They're citizens.

Does amateur radio not perform any service to the community, Len?

Because he's a non-stakeholder who has been blatantly abusing his right
to comment on matters before the FCC involving the amateur service for
years. A presumption based on applied common sense and experience.

indeed the cash is problem I was well on the way leading to the NPRM
then the backer back out thinking the FCC is finaly goign to take care
it

the longer thay wait the more likely the challange become but they
(the ffc) are on record as saying it will be out after the onibus and
before the end of the years

> thanks

If you buy the 5-10$ variety from Rat Shack you first are going have
to convert from F type to BNC connector, because they are a made for
tv device. You will get a small loss from the 2 added adapters, and the
splitter will be around -3.5db loss. From input to splitter to the scanners
input it will be close to a -4db loss. Then there is Stridesberg, who does
sell splitters (passive and active) that have BNC connectors. The active
ones will show no loss and the passive will be -3.5db loss again. If
you go with Stridesberg be prepared to write a healthy sized check,
but they are close to mil-spec as you can get and is very good stuff.
Dont let the -3.5db loss scare you,, most times you wont know the
difference, unless you are in a very weak signal area.

Forgot to add an important point. If you have a coax run of more than
10-20 feet please dont use RG 58. You will get more loss from it than
the splitter especially at the higher freqs. If you dont want to/cant run
the bigger heavier coax i.e. RG 213 go with RG 6. Its a 75 ohm cable
instead of 50 but has very good loss rates and the difference in impedance's
will be negligible and its the same basic diameter of RG 58.

> > he is a citizen?

We can all toss comments at all NPRMs, that's not the point. The topic under discussion is Anderson's behavior during ham NPRM commenting periods and the way the FCC probably handles his "comments". As far as stakes go Anderson himself made it transparently clear years ago that he has no stake whatsoever in the regulation of the amateur radio service when he stated that he is not a ham and does not have any intention of becoming a ham in the future.

> and what abuse?

Flooding the FCC with 200 comments on one ham radio NPRM is juvenile and abusive behavior every way you look at it. And it's not in the direction of supporting the cause of you NCTAs.

> did you read a different constituions than I

Again that's not the point, the point is how his submissions are regarded and dealt with after the FCC has processed them in accordance with all the laws under which they operate. You gotta be as naive as a newborn if you think the FCC attaches as much value to any of Anderson's nonsense as they do, for instance, to the inputs submitted by the ARRL.

I have an old Regency Flight Scan VHF-Air only scanner but no manual. I am looking for instructions on programming the channel bank and also programming direct access frequencies.

Here is the scanner: http://www.rigpix.com/regency/regency_actt720a.htm

Thanks in advance.

I do not think you "program" it per se. It probably uses crystals.

It's a programmable scanner, and not that hard to program as I remember; I
used to have one but it's been about 15 yrs. since I programmed one. I do
remember that after entering the freq. by the keypad (on the left) then the
number of the channel you wanted the freq. entered into must be plressed (on
the right). I didn't have a manual with mine either, but it was simple to
figure out.

H.J.

p.s. Sell that one at a garage sale and get a RS-2052 at a close-out steal.
UHF airband1,000 channel**GREAT SCANNER**

My Probe 3 software is running in full screen mode. How do I take Probe out of full screen mode? I have read the Probe manual and looked in the Probe menus, and I can't remember how I got to full screen mode in the first place!

Thanks.

"Worthless and Unneeded"? That was NOT the question!! Learn to answer the question! READ THE SUBJECT LINE.

No one asked whether it is useful, it absolutely is, the question is: is it "keeping good people out of ham radio?"

NOPE!!!

probe 3 runs in DOS doesn't it ? .... in dos you can " alt-tab "
to different programs running but NOT have several screens
of different programs displayed at the same time ... as when in
the windows environment !

asking to take a DOS level program out of full screen mode would only
be needed when you need a " command line " level operation
while the program is operating ..... most programs that need a "
command line " during dos operation have a provision for that !

not sure what you are asking here ?? ....

k.........

More info:

I'm running Probe 5 from Win98 (I had the Probe version info wrong in my
original post).

Running Probe from the MS-DOS prompt, there is a Windows Full Screen icon
at the top of the window, between the Paste and Properties icons. Once
toggled
to full screen, how do I toggle back? The full screen Probe hides other
apps, like
Unitrunker, and Uniscope, that I want to monitor while browsing frequencies.

Thanks for your response, Krackula. I enjoy your posts.

Yes it is, and the best scanner that I've ever had. I have about 850
aircraft freq. programmed in it and it seems that there is constant chatter
going on all the time. I particularly enjoy listening to the crews of the
C-130s (flying in groups of 3 or 4 planes) talking between the planes. They
get pretty "wild" at times.

Eliminating CW will let in more people like 'Mark in the Dark'. That
won't be good for the rest of us if we enjoy having good intelligent
QSO's.

Sorry, but I can say for an absolute fact that your 're wrong. It had
kept me out of ham radio and I know exactly what kind of person that I
am. And before the obligatory "lazy" word is trotted out, I have to
work for the pay cheque that buys the radio, pays the rent for the
building that the radio is in and pays for the tower that is in the
back yard. I have to work extra to pay MORE for a place where I am
allowed a tower, as opposed to less expensive digs.

Honestly, I can't believe how some pro-coders look down on no-coders
with such contempt. I was once a member of a "live steam" model
railroad club. These were larger model steam trains that ran with real
steam instead of electric power. They could be run with either propane
or coal, depending on the individual. The guys who built their
locomotives from scratch NEVER looked down on the guys who bought
theirs from a classified ad. The guys burning coal did NOT call the
propane guys "lazy". We all enjoyed a fine hobby and club meetings
were always good fun and most informative. It was great for a

mechanic, like myself, to rub shoulders with experienced retired machinists who built these locomotives. At one of our "open houses", which were located outdoors at the club track, my daughter took her first steps.

Isn't ham radio supposed to be like that? Is there no camaraderie?

Yes ham radio is supposed to be camaraderie. People are supposed to help each other. The divisiveness stems from the fact that too many no-coders appear to want to change the requirements with no knowledge, experience, or understanding of the requirements. In addition, most of us have experienced people who said they could not learn code but upon questioning find that they did not use a good training method and did not train correctly. Yet when they decided they were tired of waiting did learn it and got their upgrade. Then finding out how useful it was in ham pursuits were glad that they had done it.

So far of each of the reasons that people put forth as to why they can't learn it have been disproven by the example of other people with the same problem having gone ahead and done it. The 5wpm level is obtainable although some of the problem do make faster speeds a problem (constant tinnitus may be a severe problem at 20 wpm for example). My ex-OM had 70%

hearing loss in both ears and severe tinnitus. He passed the 5wpm. I know people with dyslexia who have passed. The blind have passed. Even the deaf have passed using flashing lights or vibrating pads.

Do you have competitions in your model railroading activity? If you enter that competition, you all have to follow the published rules with no exceptions. If it is a competition for the "homebrewers", then those who don't do so can enjoy viewing them but they cannot enter into the competition.

Speaking as a ham licensed for 50+ years, I would say a
lot of the divisiveness stems from coded hams trying to
substitute Morse code skill for technical knowledge and
intelligence.

Ham#1: "I've got a PhD in RF Engineering."

Ham#2: "Who cares, I flunked out of high school but
I can do 40 wpm at Morse code. So there!"

Eliminate the code requirement and triple the difficulty
of the technical exams. Problem solved.

Nope, won't solve the problem.

The solution is to accept people as true hams that passed the exams existing at the time they were licensed. PERIOD!!

What lie??

No-coders are missing a major portion of the HR experience. That is NOT a lie!
It is a fact.

Example: you can call yourself a marine two days after enlistment. But, you
become a Marine after completion of basic training! The commitment to success
through a period of trial and learning makes the Marine not the uniform.

No-coders have enlisted in the hobby. But, ...

Thanks to all who responded. I purchased the latest ver of
Scancontrol but for some reason it will not recognize my bc898t.

It worked perfectly for my 245XLT but will just not connect with my
bearcat 898T. I tried 2 different com cables and two computers, both
with working com ports and it will just not find it.

Anyone else have this kind of problem? Any ideas for a fix? I have
gone through the setup a dozen times and tried several diff baud rates
but it just will not locate the bc898t at all.

And before anyone asks, yes the readout on the scanner reads "RMT"
which sets it in remote mode. And btw, I have reset it a dozen times
too...

HELP !!!!!!!

Mike

I have not experienced EME or FS-ATV or a great many other areas of amateur radio but I have done CW. I don't do it anymore but I have experienced it. CW is the one mode that can get through under almost any condition. You can (I can't anyway) copy CW in the middle of a thunder storm, using the Aurora as a reflector, using meteor ionization trails as a reflector or just direct point to point contact to accomplish this. Try that with FM, AM, SSB voice or digital.

The problem with this and similar threads is a number of individuals do not feel that they need to learn CW because they don't intend to use it.

A person of "Quality" may never need the proper etiquette to greet the Queen but you had better know how to be considered as such a person.

It's too easy to find hams that know code, used code and hated it.

>Example: you can call yourself a marine two days after enlistment. But, you
>become a Marine after completion of basic training! The commitment to success
>through a period of trial and learning makes the Marine not the uniform.

Poor analogy. The Marines NEED harsh training to be able to do their
difficult jobs properly as lives and the nation depend on them. The
training is not a test of commitment, it is a harsh reality.
Ham radio is just a hobby.

>No-coders have enlisted in the hobby. But, ...

Did you not read my last post? It's right below. The guys who built
their own locomotives did NOT go up to the guys who bought theirs and
say "You are not a real model steam train operator!!!"

It's just a hobby.

The solution is to accept the people who are licensed, regardless of
weather or not you agree with the test method.

My dad got his drivers license back in 1943 with NO test at all! They
just asked him "Are you blind?" He said "No" and the response was
"That will be $1 please".

I got my license in 1978 and I had to take driver training and pass 2
tests. According to some of the pro-code logic here, I should walk up
to him and tell him that he is not a real driver and that I am better
at driving than him. That would go over like a lead balloon.

No competitions, just a bunch of guys who like live steam model
trains. The club did not exist for that.

I forgot to mention that my dad has had a perfect driving record, not one ticket in 63 years. [yes, I did ask him] As for me, I have been known to fracture a traffic law or two. I ended up paying a hefty price for that but my record is clean now.

So, you see, lack of testing did not make my dad a bad driver while training and testing did not make me a good driver [at least not back in my teen years]. But then, I am a mechanic and I can rebuild a transmission in my back yard and you're not a real driver if you can't.

It is usually because they don't have a clue technically
and base their entire level of self esteem on skill in an
obsolete mode. Kicking out all the people with an IQ of
less than 110 out of amateur radio would probably solve
the whole problem.

Not according to my logic. He met the requirements of the time and you have
met the requirements of yours.

As I said, human nature has a lot of negative aspects no matter what the
activity. All one can do is ignore it and do their personal best.

>>Do you have competitions in your model railroading activity? If you enter

Still my point is that when there are rules, one is obliged to follow them
whether they like them or not.

Not hardly. A couple of the most obnoxious people I know rate as geniuses
on IQ tests. Brain power and social graces are independent attributes.

I am looking for the battery specification for the Plectron 720A (monitor receiver). The documentation that I have does not list the original battery number. There was no battery in unit when I received (common).

Could have really used feature with loss of commercial power in recent storm events.

thanks guys for the info.

I have another question if I put the antenna half way up the tower will I
have decreased signal coming into the antenna through the triangular tower.
would this not let the antenna be truly Omni? my tower is about 75 feet tall
and I do not have access to the top of the tower?

Hi people,

Just to let you know that I have put up for download a Radio Logging database app for MS Access for whom ever wants to have a play with it. I did create it for myself but with a little tweaking here and there it is now suitable for the general public.

http://radio.mctowers.co.uk

Enjoy!

MC

I have been on E-bay looking for another scanner for my car.I was looking very hard at the BC 700.Then I looked at a BC 350c witch I belives picks up the same freqs.I`v seen the price of the 700s go up to $150.00.I got a BC 350c for $52.00.I know the BC 700 can be modded very easy to pick up cell phones,but with cell phones all going to dig. you will not be able to hear anything anyways.So why are so many people wanting the BC700 made over ten years ago over the BC 350c that was made less than two years ago and they can get them for less $$.Am I right on this ? Besides the 700 being able to pick up cell phones ,What is the differents between the two ?

Tom/Wisc.

Depending on the distance between the tower and the antenna, and the
frequency, you'll have a directional antenna pointing somewhere -
either away from the tower, side-to-side relative to a line between
the antenna and tower or somewhere between the two. You'd have to
mount the antenna at least 3 or 4 wavelengths at the lowest frequency
you're interested in (which would be around 25 feet at 150 MHZ,
further for aircraft or VHF-lo) - 6 to 10 wavelengths is better - to
get back a somewhat circular pattern.

Since you'll be using the antenna at widely different frequencies
there's no one solution unless the transmitters you want to monitor
just happen to all be exactly where the antenna pattern points for
that frequency. If you're that lucky, buy all the lottery tickets you
can find - they'll all be winners.

No, you can still have your microphone but you should be forced to pass
a code test before you're allowed to use it. I like 5 WPM for Tech, 13
for General, and 20wpm for Extra, but then, I'm not lazy.

Then why don't they?

>The divisiveness stems from the fact that too many no-coders
>appear to want to change the requirements with no knowledge, experience, or
>understanding of the requirements.

Nonsense. Pro-coders do NOT have some "lock" on What The
Requirements Should Be. They never did, despite all the
pro-code propaganda drilled into your respective psyches.

It should be quite obvious that every other radio service
has either given up on using morse code for communications

or never considered it in the first place. Manual radio-telegraphy has only a slight advantage in communications with other amateurs using radiotelegraphy who do not speak English.

Note: Nowhere in the "requirements" (Title 47 C.F.R. Part 97 for US radio amateurs) is it mandatory for US amateurs to communicate with foreigners. NB: Non-English speakers using International Morse Code are, essentially, required to learn parts of English to understand the English alphabet (difficult if their native language is syllabic or has a different alphabet).

The ITU-R "requirements" (Radio Regulations) no longer "require" administrations to test ALL their amateurs for any license having below-30-MHz privileges. The major (in population) nation administrations have dropped their morse code testing or substitute other tests in lieu of morse code. Since some of those nations do not have English as a primary language, those will have some future difficulty using that (supposed "universal language" of morse code) for communications with USA radio amateurs.

>In addition, most of us have experienced
>people who said they could not learn code but upon questioning find that
>they did not use a good training method and did not train correctly.

More overtly biased opinion...written AS IF morse code were an "absolute requirement" when it is merely an old regulatory hanger-on in USA amateur federal rules.

The REGULATION (not "the requirement") for US radio amateurs is simply a man-made regulation which can be un-man-made. It is not some God-given commandment of radio. Indeed, all other US radio services operating below 30 MHz do NOT use morse code radiotelegraphy. Why should radio amateurs be held elevated to some special significance?

Except for the older military-trained radiotelegraphers in US amateur radio, all the tales told (by so-called successful pro-coders) have them doing basic learning then trying out on the amateur radio bands for greater skill in radiotelegraphy.

The basic fallacy of pro-coder thinking is that "all" have some innate ability to learn morse code. That has been disproven as far back as World War II when the US military began screening new recruits for the aptitude to learn morse code. That fallacy has been disproven by countless other tales of individuals who tried the so-called "good training methods" and tried to "train

correctly" (even under strict supervision).

>Yet
>when they decided they were tired of waiting did learn it and got their
>upgrade.

The "upgrade requirements" were lobbied for to emphasize
morse code radiotelegraphy skill. That is history. It
would have been difficult to overcome the lobbying of the
ARRL towards such "upgrades through morsemanship." Yet
there has been efforts by concerned radio amateurs (who
have been tested to the maximum telegraphic radtes) to
eliminate the morse code test entire. That is not some
strict USA effort since the ITU did change international
amateur Radio Regulations in 2003...under pressure from
the IARU. Your sentence is written with an obvious
pro-coder bias.

>Then finding out how useful it was in ham pursuits were glad that
>they had done it.

Another fallacy and another pro-coder bias statement. It is
obvious that many, many US radio amateurs were NOT favorites
of morse radiotelegraphy and never used it after they received
their first license.

>So far of each of the reasons that people put forth as to why they can't
>learn it have been disproven by the example of other people with the same
>problem having gone ahead and done it.

Yet another fallacy and a repetition of the earlier fallacy
that all US human beings are somehow able to learn morse
code...provided they have some (mysterious) "attitude"
adjustment in favor of radiotelegraphy as an "absolute"
requirement in radio?

>The 5wpm level is obtainable
>although some of the problem do make faster speeds a problem (constant
>tinnitus may be a severe problem at 20 wpm for example).

Then they should use "flashing lights or vibrating pads."

The reduction to 5 WPM equivalent word rate was an attempt
of the FCC to satisfy both the pro-morse-code-test citizens
and the (ever-growing) NO-code-test advocates. It satisfied
neither.

>My ex-OM had 70%
>hearing loss in both ears and severe tinnitus. He passed the 5wpm.

It would seem that one of you (perhaps both) at lost the
ability to understand the "I do" at your marriage ceremony?

Did your "EX" pass using flashing lights or vibrating pads?

>I know people with dyslexia who have passed.

I knew people with terminal cancer who "passed." [just not
the code test]

I "know people" ranging from PhD aerospace gurus to never-
make-star-quality bimbo actresses and thousands of shades
of personal abilities in between. I know few dyslexics.

>The blind have passed.

I am acquainted with several blind people through the
Braille Institute. None of them had any desire to learn
morse code. They were thankful enough to be able to get
around by themselves and be reasonably productive in life.

>Even the deaf have passed using flashing lights or vibrating pads.

In the year that Ham Radio magazine sold out to CQ, I
interviewed 11 licensed radio amateurs preparing an article
for that magazine. ALL of them passed their code tests
for amateur radio licenses when they could still hear.
None of them "passed using flashing lights or vibrating
pads." All were male. One was a practicing dentist.

>Do you have competitions in your model railroading activity? If you enter
>that competition, you all have to follow the published rules with no
>exceptions.

Part 97, Title 47 C.F.R. does NOT manadate that US radio
amateurs engage in "competition" radio activity.
Federal law (Communications Act of 1934 plus the Tele-
communications Act of 1996) requires ALL US radio
amateurs to follow its regulations. That is NO contest
nor a "competition" activity. It is merely the LAW.

As with all US federal agencies, the FCC does accept
citizen commentary to them regarding radio regulations.
The FCC responds to Petitions submitted by US citizens
in regards to those radio regulations. [however, not
with blinding speeds of decision in regards to amateur
radio] Nowhere does the FCC discriminate between those
are already licensed in amateur radio versus those not
licensed. FCC does not treat the group of already-
licensed as some kind of fraternal order of the already-
licensed to be listened to over and above all other
interested citizens.

The morse code test (for under-30-MHz operating privileges)
affects the non-licensed US citizens. It does NOT affect
those already legally licensed as radio amateurs...except
in the limited conditions of certain already-licensed
Technician classes. That code test does NOT legally
affect ANY other already-licensed US radio amateur. If

they say it does then they have some emotional disturbance (not a legal problem nor a regulatory problem).

I know a few model railroaders. As far as I know none are into "competitions" concerning their hobby. They do it for the fun of model railroading. As a hobby, not as a substitute for life...nor advancing the state of the art in rail transport.

I know many more model builders and model aircraft flyers. [I have been both] The Academy of Model Aeronautics (AMA) is a membership organization (about a quarter million members in the USA) with a large rule set to follow in flying model aircraft. That rule set is for both competition flying and for safety; there is special liability insurance for members of the AMA in regards to that flying activity. There is no absolute requirement to be an AMA member to enjoy model airplane flying nor is there some federal test one must take to be one. It is a hobby...yet the AMA has successfully petitioned for and gotten many radio channels expressly for model remote control. No code test nor license was required. You may read about it in Part 95, Title 47 C.F.R. under Radio Control Radio Service.

"Park flyers" are free to fly models, even to radio-control them, all without being licensed by the FCC or as a member of the Academy of Model Aeronautics. Add to that the R-C cars and boats. There is a very large model hobby industry existing in the USA to provide for such hobbyists. From the size of that industry the number of modelers would easily equal the number of USA radio amateurs...if not exceeding it.

Your comments in regards to "competitiveness" do not apply to US citizens seeking to change existing radio regulations in the USA, any radio service.

More likely a knee jerk reaction to the very few but very vocal ones who try to come in and act like they know all there is to know about radio when the "ink isn't even dry on their license". It's unfortunate that the experienced hams don't have the discipline to withstand this nonsense without such knee-jerk reactions.

When a new licensee (the level of license is irrelevant) tells me that you can't work DX without an amplifier, I just tell him about the countries I worked with my 100 watt radio and relatively low mount G5RV. But some hams turn bitter instead when a newbie insists that he is right and they are wrong.

No such "propaganda", Len.

> It should be quite obvious that every other radio service
> has either given up on using morse code for communications
> or never considered it in the first place.

Why is that important to *amateur radio* policy, Len? Amateurs *do* use
Morse Code - extensively.

> Manual radio-
> telegraphy has only a slight advantage in communications
> with other amateurs using radiotelegraphy who do not speak
> English.

Actually, Morse Code has a lot of advantages.

> Note: Nowhere in the "requirements" (Title 47 C.F.R. Part
> 97 for US radio amateurs) is it mandatory for US amateurs
> to communicate with foreigners.

That's true. But one of the Basis and Purposes of the Amateur Radio Service is international good will. Communicating with "foreigners" is one way to do that.

> NB: Non-English speakers
> using International Morse Code are, essentially, required
> to learn parts of English to understand the English

> or has a different alphabet).

Of course. So?
>
> The ITU-R "requirements" (Radio Regulations) no longer

> any license having below-30-MHz privileges.

Yep. That changed almost 3-1/2 years ago. Yet FCC has not acted upon it.

> The major
> (in population) nation administrations have dropped their
> morse code testing or substitute other tests in lieu of
> morse code.

How do you know?

Have China, India and the countries making up the former Soviet Union changed their Morse Code test policy? How about Japan?

Seems to me that the changes have mostly occurred in Western Europe, the British Commonwealth, and a few South American countries.

> Since some of those nations do not have

It's a fact that at least some people use poorly-designed training methods.

> The REGULATION (not "the requirement") for US radio
> amateurs is simply a man-made regulation which can be
> un-man-made. It is not some God-given commandment of
> radio.

That's true. In fact, *all* radio license requirements are man-made.

> Indeed, all other US radio services operating
> below 30 MHz do NOT use morse code radiotelegraphy.

Why is that so important? Do you think radio amateurs should not use it
either?

> Why should radio amateurs be held elevated to some
> special significance?

It's not about 'special significance".

Radio amateurs *do* use Morse Code, so it makes sense to test for
knowledge of it.
>
> Except for the older military-trained radiotelegraphers
> in US amateur radio, all the tales told (by so-called
> successful pro-coders) have them doing basic learning
> then trying out on the amateur radio bands for greater
> skill in radiotelegraphy.

What's wrong with that?

> The basic fallacy of pro-coder thinking is that "all"
> have some innate ability to learn morse code.

There are obviously those who cannot learn it - just as there are those
who cannot learn to speak, or read and write, or who cannot pass the
written tests.

> That has
> been disproven as far back as World War II when the US
> military began screening new recruits for the aptitude
> to learn morse code.

Nope.

The military aptitude testing was done to find those who could learn
the fastest and reach the highest levels of skill in the least time.
The requirements for military radio telegraphers were much higher than
for amateurs, and the military could not afford lots of time to train
them.

btw, the existence of such aptitude testing proves that the US military
needed large numbers of Morse Code skilled radio operators during WW2.

> That fallacy has been disproven
> by countless other tales of individuals who tried the
> so-called "good training methods" and tried to "train
> correctly" (even under strict supervision).

Who are they, Len?

> >Yet
> >when they decided they were tired of waiting did learn it and got their
> >upgrade.
>

> The "upgrade requirements" were lobbied for to emphasize
> morse code radiotelegraphy skill. That is history.

Who lobbied for those requirements, Len?

When did they lobby for the requirements?

The fact is that in all the history of US amateur radio licensing,
every increase in Morse Code testing has been accompanied by an
increase in written test requirements. So the emphasis has always been
balanced between written testing and Morse Code testing.

Since 1990 it has not been necessary for anyone with a doctor's note
seeking an FCC-issued amateur license to go beyond the basic 5 wpm
test. Since 2000 it has not been necessary for anyone seeking an
FCC-issued amateur license to go beyond the basic 5 wpm test.

> It
> would have been difficult to overcome the lobbying of the
> ARRL towards such "upgrades through morsemanship."

When did ARRL do such lobbying, Len? 1936?

> Yet
> there has been efforts by concerned radio amateurs (who
> have been tested to the maximum telegraphic radtes) to
> eliminate the morse code test entire.

And efforts by others to retain the test.

> >The 5wpm level is obtainable

The FCC accepts comments from everyone - not just citizens.
"Foreigners" and groups/corporations are welcome to comment as well.

How much consideration the comments get is another matter.

> The morse code test (for under-30-MHz operating privileges)
> affects the non-licensed US citizens.

And those licensed, too. And noncitizens.

> It does NOT affect
> those already legally licensed as radio amateurs...except
> in the limited conditions of certain already-licensed
> Technician classes. That code test does NOT legally
> affect ANY other already-licensed US radio amateur.

It affects them in many ways. If amateur radio should change for the
worse because
of changes in license requirements, those who are already licensed
would be affected.

For example, if someone wanted to change the real estate zoning in your
neighborhood,
that change would not "legally affect" you or your neighbors, unless
you wanted to build on your property. Your houses would not change.

> If
> they say it does then they have some emotional disturbance
> (not a legal problem nor a regulatory problem).

Not true. If amateur radio is made worse by rules changes, all involved
are affected. You, who are not involved, are unaffected.

If someone wanted to change the real estate zoning in your
neighborhood,
that change would not "legally affect" you or your neighbors, unless
you wanted to build on your property. Your houses would not change.
Would you say that those who resisted such a zoning change have an
"emotional disturbance"?

> I know a few model railroaders. As far as I know none
> are into "competitions" concerning their hobby. They do
> it for the fun of model railroading. As a hobby, not
> as a substitute for life...nor advancing the state of
> the art in rail transport.

Model railroading does not involve any sort of licensing, nor use of the radio spectrum. What one model railroader does with his/her layout does not directly affect what other model railroaders can do with theirs.

Amateur radio isn't like that. We use a shared and limited resource - the radio spectrum.

A more valid analogy would be something like operating motor vehicles for noncommercial purposes, where the medium (the roads) are shared with many others.

> I know many more model builders and model aircraft flyers.

> hobby...yet the AMA has successfully petitioned for and
> gotten many radio channels expressly for model remote
> control.

How many channels? How much total spectrum? How much of it is below 30 MHz?

IIRC, the total amount of spectrum set aside for model control is less than the narrowest amateur band above 30 MHz.

btw, there has been no Morse Code test requirement in the US for use of *all* the amateur bands above 30 MHz.

> No code test nor license was required. You may
> read about it in Part 95, Title 47 C.F.R. under Radio
> Control Radio Service.

They got a few channels in a few narrow slices of VHF/UHF. They are allowed to use only very low power, with almost all their communications limited to line-of-sight.

Amateur radio is very different.

> "Park flyers" are free to fly models, even to radio-control
> them, all without being licensed by the FCC or as a member
> of the Academy of Model Aeronautics. Add to that the R-C
> cars and boats. There is a very large model hobby industry

> existing in the USA to provide for such hobbyists. From
> the size of that industry the number of modelers would
> easily equal the number of USA radio amateurs...if not
> exceeding it.

Yet all they need is a small assortment of VHF/UHF channels, low power, small antennas and line-of-sight radio.

Is that what you think amateur radio should be?

It should be remembered that one of the primary reasons model aircraft enthusiasts got channels in the ~70 MHz range was the fact that their 27 MHz allocation became unusable due to being effectively taken over by illegal cb operation.
>
> Your comments in regards to "competitiveness" do not apply
> to US citizens seeking to change existing radio regulations
> in the USA, any radio service.

FCC does not limit comments to only US citizens.

And when FCC recently asked for comments on the Morse Code test issue, the majority of those commenting were *against* the complete elimination of the Morse Code test. The ratio was approximately 55% in favor of at least some Morse Code testing.

Dee, the "ink on my license" has been "dry" for 50 years.

The mimeograph "ink" on my Army assignment has been "dry"
for 53 years.

The "ink" on my first aerospace hiring has also been "dry"
for 50 years.

In a half century of being radio-active, I've continually
been learning, working, experimenting, trying, doing. I
DO know a fair amount of things about radio and electronics
but there is always something new coming up all the time.

OH! You mean AMATEUR RADIO "license?" Of course. Amateur
radio is so very DIFFERENT than all other kinds of radio...

Riiiight...those coming into ham radio from any other kind
of radio service(s) are "newbies" and "ignorant"...?

Heil thinks so. Do you think so?

>It's unfortunate that the
>experienced hams don't have the discipline to withstand this nonsense

Gosh, I "worked countries" with nothing less than 1 KW output
on HF and a delta-match dipole. Short-range, about 300 miles.
Of course, for 24/7 ops on HF crossing the Pacific there was
40 KW PEP into a rhombic... :-)

>But some hams
>turn bitter instead when a newbie insists that he is right and they are
>wrong.

Sugar. Try some sweetener...

Uhhhhh Dee, your 100 watt radio has an amplifier in it
as do all modern transceivers. I have, in the past, worked
DX using just an oscillator but I personally don't know of
anyone who doesn't use an amplifier nowadays.

More likely a knee jerk reaction to the very few but very vocal ones who try to come in and act like they know all there is to know about radio when the "ink isn't even dry on their license". It's unfortunate that the experienced hams don't have the discipline to withstand this nonsense without such knee-jerk reactions.

When a new licensee (the level of license is irrelevant) tells me that you can't work DX without an amplifier, I just tell him about the countries I worked with my 100 watt radio and relatively low mount G5RV. But some hams turn bitter instead when a newbie insists that he is right and they are wrong.

This code argument really gets old. I passed the General 13WPM code. Bidg deal. Yeah, I like to use CW, but do I think people need to be tested on CW? Heck NO! Let's end this antiquated test. It's a modern era. If you want to learn it -fine, but don't push your old and outdated beliefs on anyone else.

JDB

5714. ID Tracker II Released

Newsgroup: rec.radio.scanner
Date: 2006-10-28 16:45:09 UTC
From: "David M. Hitchner" <biteme@spammers.net>
Message-ID: <kOL0h.10499$Fd7.7112@bignews6.bellsouth.net>
Source record: 4994
Cross-posted to: rec.radio.scanner,alt.radio.scanner

ID Tracker II has been officially released. ID Tracker II basically supports all of the features of the original ID Tracker with the following exceptions:

- Supports the BCD396T and BCD996T scanners only.
- Supports the concept of dynamic system allocation and the use of systems instead of banks.
- Channel descriptions are automatically retrieved from the scanner.

See version history for other information:
http://bellsouthpwp.net/k/d/kd5eis/IDTracker/IDTrackerIIVersion.htm

ID Tracker and ID Tracker II can be found here:
http://bellsouthpwp.net/k/d/kd5eis/IDTracker/IDTracker.htm

Blasphemy! The IBM 650 was the first computer
I ever programmed - in 1958 at Texas A&M.
Bi-Quinary (like an abacus) with a magnetic drum
and tons of air-conditioning to cool the hundreds
of dual triodes.

I was having REAL FUN with the CLOWNtesters this weekend all
on HF. Set the rig's tx output to about 10 watts and loaded up
into the 75m carolina windom with DX callsigns and the occasional
rare ITU section. Give em a call and these DX CLOWNTESTERS
would fall all over each other thinkin they just worked a needed
section an they now will be pinchin a loaf waiting for a card to
arrive in the mail to hang on their wall and impress their fatassed ham
club blokes! Baaaaaaaaaaaaaaaa hahahahahahhahaha!!! what a bunch of fools.

You don't cut wood for winter, forage the woods for berries, turn the crank on a model T, build spears to kill a deer, wash clothes in a river, or make candles to light the night, why would you want to make your own stamps? Just collect them, no CW test required.

Try not to drool on the sticky side.

It's not code requirements or tests that is keeping (and driving) good
people out of ham radio, and away from lists like these, it's
psychopaths like SC and the idiots that feed him. This WAS about real
issues, and about technology (I hit this cesspool from the antennas
list), but it is not now.
Thanks to the crap fron SC, and from the idiots that feed this Troll,
I'm leaving. On real lists, s--t pots like him are kicked out. On
usenets, the only way is to quit feeding his ego, but, unfortunately,
he is not the only idiot here.
Bye-Bill

I can work the UK on 40 phone now without going split. They can use 7040-7200 now. OTOH, who knows when the broadcasters will ever move?

It's a complete crock about protecting the DX. The answer for ragchewers has always been to use a band that isn't open to where you want to be protected from, i.e. don't ragchew on an open band unless you want DX (meaning in this case US hams) to ask to join the QSO (some actually like it when that happens, you know). It's not really hard for them to find a band that isn't open to the US.

KH2D and I used to chat on a dead band; 10 meters. Then someone from
Africa would break in for a QSO

5743. Modifying Old Crystal-Tuned Scanners

Newsgroup: rec.radio.scanner
Date: 2006-10-30 23:44:26 UTC
From: "Chris F." <zappymanNOSPAM@hotmail.com>
Message-ID: <u7w1h.12550$cz.205868@ursa-nb00s0.nbnet.nb.ca>
Source record: 4873

I recently bought a bunch of old base scanners, mostly some early Uniden Bearcat models from the late 70's. I didn't realize that these were crystal-tuned units, and now I'm stuck with them. I was wondering if there's any way to modify them to be adjustable. Perhaps an extra circuit employing 8 simple oscillators with adjustments, connected to the 8 crystal sockets? There must be a way to do this......

WHAAAAAAAAAAAAAAAA!

That's not going to happen Dan. Amateur radio is important to me. I
would turn off my rigs before I would violate any section of Part 97.

Tnx, 73, Good luck in the contest.

SC
20wpm code tested Extra

That obviously makes you a real programmer. But it is the hard way to do things, especially if you find a mistake and need to insert a new instruction somewhere. All of the target addresses after the inserted instruction change, and you have to go back and correct all references to those later instructions, as well as some references to earlier instructions (relative jump instructions change value). I much prefer the "luxury" of an assembler, because it will do all of that stuff for you.

To stay on topic, I'd probably better mention that Michael Jackson's first chimp was named "Bubbles" and that the chimp and Michael would dress alike wherever they went. The chimp later moved away to Chassell, Michigan and started a consulting business. Michael took up with another chimp named Max, thereby sending Bubbles into a jealous rage. Bubbles has been acting his anger out in Usenet's rrap ever since. He can be recognized easily, because chimps don't spell or type all that well, and his posts stick out like a sore thumb. He tries to cover it up by claiming to be dyslexic, but everyone recognizes a chimp's typing when they see it, and they know that the poster is really Bubbles.

So you finally admit that you're Bubbles, eh?

> stil avoiding you Progaming gaff tell do you take advice on uhow to

Bubbles, the word you want is spelled "gaffe" (I hope). If you really
mean "gaff," why then you are speaking of either sailing gear or cross

dressing garments (see http://www.samiscloset.com/gaffs.asp). As to programming, why I have forgotten more about it than you have yet to learn.

> handle your gaff from Kerry? it sure looks like it

John Kerry has never sent me a gaff, and I'm puzzled as to why you think that he is a cross dresser?

5770. FS: Optoelectronics OptoCom scanner

Newsgroup: rec.radio.scanner

I am offering my Optoelectronics OptoCom communications
receiver/scanner for sale. It is really nice condition & works 100%. I
have been using it with Probe 7.0 software.

The serial # is1481095.

I do not have a box, manual, or 12volt supply.

I will double box carefully however. The manual is available online.
Any wall wart or 12v supply will work fine.

I am selling to help fund other radio projects.

I would sell for $375.00 shipped UPS Insured Ground lower 48.

Thanks for considering this fine receiver.

73, Ken KG4BIG

Ok, acting on several persons advice, I bought ScanControl and find it fairly easy to use.

However, I can't seem to figure what the control channels are that it keeps asking for.

Is there a list somewhere that has recent freqs and control channels for the Fort Myers-Lee County, Florida area.

After I obtain them, where do I tell the program what they are?

Thanks Again to all those that helped me and will continue to do so,

Mike - SW Fl

Go here to the Radio Reference web site. Lots of good information:
http://radioreference.com/modules.php?name=RR&sid=226

I am not familiar with the software that you have, but the control channels are the frequencies in the trunked system that send out the digital data that tells all the radios in the system what frequencies to switch to. They can be identified because they transmit constantly a noise that sounds like a diesel engine idling. Your scanner uses these channels to trunk track the system, so you need these.

I just recently acquired a PRO-92 scanner and anxiously wanted to begin uploading channels.

I downloaded the program Win92

I read on starrsoft.com
http://www.starrsoft.com/software/Win96/Cables/cables.html

that the cable to purchase was RS's 20-289. I drove there with my scanner and laptop. Oh no, this is a serial cable and my new HP laptop doesn't have a serial connection. My next bright idea was to try a USB to serial adaptor with RS's 20-289. No good, the laptop needed drivers for the adaptor and the adaptor did not come with software.

Next I saw sitting on the shelf was RS's 20-047 kit which included the drivers CD and USB cable. I loaded the necessary drivers and hooked up the cable and scanner and NOTHING. I kept getting errors, something to the effect that Win92 couldn't open the port. Another message said there was a time out error in waiting for some code.

Does Radio Shack have anything that will work on the new computers and a PRO-92 scanner? I'd rather buy something locally (Chicago) off the shelf rather than wait a week or so for an Internet order. If that's the way to go then I have no other choice.

Thanks for any feedback.

5783. 30 helpful ham tips for no-codes and new hams like RadioGuy AKA PapaDog.

The 30 Steps below will help all No-Code Hams, it will also help you to find others just like yourself. These 30 steps should also be added to the present writtens.

Step One: Use as many "Q" signals as possible. Yes, I know they were invented solely for CW and are totally inappropriate for two meter FM, but they are fun and entertaining. They keep people guessing as to what you really meant. I.E. "I'm going to QSY to the phone." Can you really change frequencies to the phone? QSL used to mean, "I am acknowledging receipt", but now it appears to mean, "yes" or "OK". I guess I missed it when the ARRL changed the meaning. It is also best to use "OK" and "QSL" together. Redundancy is the better part of Lid-dom.

Step Two: Never laugh when you can say "HI HI". No one will ever know you aren't a long time CW rag-chewer if you don't tell them. They'll think you've been on since the days of Marconi.

Step Three: Utilize an alternative vocabulary. Use words like "destinated" and "negatory". It's OK to make up your own words here. I.E. "Yeah Tom, I "pheelbart zaphonix" occasionally myself."

Step Four: Always say "XX4XXX" (Insert your own call) "for I.D." As mentioned in Step One, anything that creates redundancy is always encouraged. That's why we have the Department of Redundancy Department. (Please note that you can follow your call with "for identification purposes" instead of "for I.D." While taking longer to say, it is worth more "LID points".

Step Five: The better the copy on two meter FM, the more you should use phonetics. Names should be especially used if they are short or common ones. I.E. "My name is Al... Alpha Lima" or "Jack.. Juliet Alpha Charlie Kilo." If at all possible use the less common HF phonetics "A4SM... America, Number Four, Sugar Mexico." And for maximum "LID points", make up unintelligible phonetics. "My name is Bob... Billibong Oregano Bumperpool."

Step Six: Always give the calls of yourself and everyone who is (or has been) in the group, whether they are still there or not. While this has been unnecessary for years, it is still a great memory test. You may also use "and the group" if you are an "old timer" or just have a bad memory. Extra points for saying everyone's call and then clearing in a silly way "K2PKK, Chow, Chow."

Step Seven: Whenever possible, use the wrong terminology. It keeps people guessing. Use "modulation" when you mean "deviation", and vice-versa.

Step Eight: If someone asks for a break, always finish your turn, taking as long as possible before turning it over. Whenever possible, pass it around a few times first. This will discourage the breaker, and if it is an emergency, encourage him to switch to another repeater and not bother you.

Step Nine: Always ask involved questions of the person who is trying to sign out. Never let him get by with just a "yes" or "no" answer. Make it a question that will take him a long time to answer.

Step Ten: The less you know on a subject, the more you should speculate about it in the roundtable. Also the amount of time you spend on the subject should be inversely proportionate to your knowledge of the subject even though you have no damn clue.

Step Eleven: Always make sure you try to communicate with only a handheld and a rubber duck antenna. Also, make sure you work through a repeater that you can hear very well, but it cannot hear you. This will put out a kind of "LID mating call": "Well, Joe, I can hear the repeater just fine here. I wonder why it can't hear me?" You will score maximum LID points if you are mobile, and with the radio lying in the passenger seat.

Step Twelve: If you hear two amateurs start a conversation, wait until they are twenty seconds into their contact, and then break in to make a call, or better yet to use the auto-patch. Make sure you keep the repeater tied up for at least three minutes. This way, once the two have re-established contact, they won't even remember what they were talking about.

Step Thirteen: You hear someone on the repeater giving directions to a visiting amateur. Even if the directions are good, make sure you break in with your own "alternate route but better way to get there" version. This is most effective with several other "would-be LIDs", each giving a different route. By the time the visiting amateur unscrambles all the street names whizzing by in his mind, he should have moved out of the range of the repeater. This keeps you from having to stick around to help the guy get back out of town, later.

Step Fourteen: If an annoying station is bothering you, make sure your other "LID" buddies have a "coded" frequency list. Even though "CODES" are strictly forbidden on Amateur Radio, it's really neat to practice "James Bond" tactics.

Step Fifteen: Always use the National Calling Frequency for general conversations. The more uninteresting, the longer you should use it. Extra points are awarded if you have recently move from an adjacent frequency for no reason. Make sure when DX is "rolling" in on 52.525 that you hang out there and talk to your friends five miles down the road about the good old CB days!

Step Sixteen: Make sure that if you have a personal problem with someone, you should voice your opinion in a public forum, especially a net. Make sure you give their name, call, and any other identifying remarks. For maximum points, make sure the person in question is not on the repeater, or not available.

Step Seventeen: Make sure you say the first few words of each transmission twice, especially if it is the same thing each time. Like "roger, roger" or "fine business, fine business". I cannot stress enough about encouraging redundancy.

Step Eighteen: If you hear a conversation on a local repeater, break in and ask how each station is receiving you. Of course they will only see the signal of the repeater you are using, but it's that magic moment when you can find a fellow "LID", and get the report. Extra points are awarded if you are using a base station, and the repeater is less than twenty-five air miles from you.

Step Nineteen: Use the repeater for an hour or two at a time, preventing others from using it. Better yet, do it on a daily basis. Your quest is to make people so sick of hearing your voice every time they turn on their radio, they'll move to another frequency. This way you'll lighten the load on the repeater, leaving even more time for you to talk on it.

Step Twenty: See just how much flutter you can generate by operating at handheld power levels too far away from the repeater. Engage people in conversations when you know they wont be able to copy half of what your saying. Even when they say your uncopyable, continue to string them along by making further transmissions. See just how frustrated you can make the other amateur before he finally signs off in disgust.

Step Twenty One: Use lots of radio jargon. After all, it makes you feel important using words ordinary people don't say. Who cares if it makes you sound like you just fell off Channel 19 on the citizen's Band? Use phrases such as "Roger on that", "10-4", "I'm on the side", "Your making the trip" and "Negatory on that".

Step Twenty Two: Use excessive microphone gain. See just how loud you can make your audio. Make sure the audio gain is so high that other amateurs can hear any bugs crawling on your floor. If mobile, make sure the wind noise is loud enough that others have to strain to pick your words out from all the racket.

Step Twenty Three: Start every transmission with the word "Roger" or "QSL". Sure, you don't need to acknowledge that you received the other transmission in full. After all, you would simply ask for a repeat if you missed something. But consider it your gift to the other amateur to give him solace every few seconds that his transmissions are being received.

Step Twenty Four: When looking for a contact on a repeater, always say your "listening" or "monitoring" multiple times. I've always found that at least a half dozen times or so is good. Repeating your multiple "listening" ID's every 10 to 15 seconds is even better. Those people who didn't want to talk to you will eventually call you, hoping you'll go away

after you have finally made a contact.

Step Twenty Five: Always use a repeater, even if you can work the other station easily on simplex ... especially if you can make the contact on simplex. The coverage of the repeater you use should be inversely proportional to your distance from the other station.

Step Twenty Six: When on repeaters using courtesy tones, you should always say "over". Courtesy tones are designed to let everyone know when you have unkeyed but don't let that stop you. Say "over", "back to you" or "go ahead". It serves no useful purpose but don't worry, it's still fun!

Step Twenty Seven: Use the repeater's autopatch for frivolous routine calls... especially during morning or evening commute times. While pulling into the neighborhood, call home to let them know you'll be there in two minutes.... or, call your spouse to complain about the bad day you had at work. After all, the club has "measured rate" service on their phone line so they get charged for each autopatch call. Your endeavor is to make so many patches in a year that you cost the club at least $20 in phone bills. That way you'll feel you got your money's worth for your dues!

Step Twenty Eight: Never say "My name is ....." It makes you sound human. If at all possible, use one of the following phrases: a) "The personal here is ..." b) "The handle here is..."

Step Twenty Nine: Use "73" and "88" incorrectly. Both are already considered plural, but add a "s" to the end anyway. Say "73's" or "88's". Who cares if it means "best regards" and "love and kisses." Better yet, say "seventy thirds"! (By the way, seventy thirds equals about 23.3).

Step Thirty: If the repeater is off the air for service, complain about the fact that it was off the air as soon as it's turned back on. Act as though your entire day has been ruined because the repeater wasn't available when you wanted to use it. Even thought you have never paid a penny to help out with the upkeep of it.

Radio Shack has a cable with a USB connector on one end and the
appropriate plug for a PRO-92, 95, 97, or 96 one the other end.
Offhand, I don't remember the catalog number, but I am sure you can find
it on the RS website. The same cable is also available from the mfr. of
the PRO-92, at http://www.greamerica.com/scanner.html. Many people
have used the 20-289 cable with Win92 and a USB/Serial adapter,
starrsoft.com has a page on which adapters work best and how to do it.

The 20-047 cable definitely is not for the PRO-92. It is for older
scanners.

Wrong - the 20-047 is the USB cable for newer scanners, see
http://www.radioshack.com/product/index.jsp?productId=2177609&cp

20-048 is for older scanners and is discontinued.

Sorry, my error! Yes, the 20-047 is the correct USB cable for the
PRO-92, and it should work.

The 20-289 cable and the Radio Shack or Keyspan USB adapter. The
drivers are available for both - in the package and on the respective
web sites.

The 20-047 cable won't work - the scanner end voltage levels aren't
compatible with the Pro-92.

You could build a synthesizer. You'd need a CPU also, to control it,
and some RAM to keep the frequencies you want to monitor. Some ROM to
keep the firmware.

Or you could buy a Uniden 996 for a lot less money.

> Ken

RadioReference www.radioreference.com should have what you are looking for.

With the control frequencies, they need to be keyed in first, then followed
by the secondary frequencies.

With the Radio Shack pro-95 if you have one of those, start each bank by

Ch. 00 - leave blank
Ch 01 - key in control channel
Ch 02 - key first secondary frequency
and continue.

From the Radio Shack website for the 20-047 cable:

These scanners are compatible and always require the 3" cable adapter:
20-196, 20-427, 20-428, 20-466, 20-496, 20-515, 20-522, 20-523, 20-524B,
20-525, 20-526, 20-527, and most new RadioShack models.
a.. Most scanners use the 3" stereo to mono adapter (included)

PRO-92 = 20-522 so it is supported. And 20-196 = PRO-2067, the mobile
version of the PRO-92, also supported.

That's odd, because I have a 20-527 [Pro-97] and it WILL NOT work with
the 3" stereo-to-mono adapter. The stereo plug must be plugged
directly into the scanner. Might be a firmware change. Can't speak for
other scanners.

If it's a Motorola type system, only the control frequencies.

>With the Radio Shack pro-95 if you have one of those, start each bank by

>Ch. 00 - leave blank
>Ch 01 - key in control channel
>Ch 02 - key first secondary frequency
>and continue.

If there's a secondary control frequency it's a Motorola system. If
not, all the frequencies have to be programmed in logical channel
order.

>This is an easy one. Figure 3.0 db loss, using a standard CATV splitter.

That's 3db inherent loss due to splitting. (Each signal is half the original signal, or -3db.) With most TV splitters, add anywhere from 6db to 20db additional loss in the components in the splitter.

And ALL output ports must be terminated. If you move the scanner from one cable to the other you'll get additional loss due to the unterminated cable. (If there are more ports than scanners, you have to connect a terminating resistor to each unused port.)

Big city (lots of signals)? Stay away from GRE (most Radio Shack
scanners) - the front end is too sensitive.

Multi-site? Uniden 996 is the only scanner that does it properly so
far. (The Pro-96/2096 sort of does it due to a bug in the firmware.)

700 MHz? Uniden 396 or 996.

Portable? 396 or Pro-96.

Base/Mobile? 996 or 2096.

I have had several GRE/Radio Shack scanners and I feel that they are
not sensitive enough [depending, of course, on the antenna]. I live in
Edmonton, AB..a city of over 1 million so I am not sure if it
qualifies as big with lots of signals as defined above. Certainly not
big if compared to L.A. or New York. My favorite analog scanner is my
Pro-97

Andy writes:

A FINE idea. And if the Extra needs to go to the restroom for some
reason, the no-code should accompany him with a roll of tissue and
assist in His endeavors.......

It's innovative ideas like yours that bring inspiration and, dare I
say it, PRIDE to those who have joined the ranks of Amateur Radio.
And I am shocked, I tell you, shocked, at the attempts of our
members to discredit what is obviously a very inventive
personality.....

There's no doubt in my mind that you could be another
"Larry the Cable Guy" if you set your mind to it. The world has
far too many Einsteins and not nearly enough Howard Deans, and
you might have a ready made niche.....

No one here thinks more highly of you than I ,

Andy

If you're really a code tested Extra, why do you want to dumb down ham
radio? You should help me push for better radio exams by supporting an
increase in speed of the code requirement. If we can get rid of the
no-codes and nickle hams, test everyone up to 13 and 20wpm, no one will
have to sit on the floor at club meetings anymore.

I like it, but there's only one problem. No-codes don't use toilet paper.

Somebody is going to have to Elmer them on how to wipe a butt and since
it's your idea....

I don't want to dumb down amateur radio, but you very much want to.
You see, amateur radio is supposed to be about advancement of the art,
```

and preparing and maintaining a civilian population with contemporary communications skills Mandating a mode that has fallen completely out of military and commercial use as obsolete is contrary to the concept of advancement of the art. It is as if blood letting was a required course for a medical degree.

Code is fine for those who like that mode. I use it at least once a month. However, it is no longer the mode that is best in weak signal conditions, or that uses the narrowest band width for effective communication. PSK31 runs circles around code. And guess what....many of the most fervent code guys I know cheat and use computers to print the received code on a screen, and a keyboard to allow the computer to generate their sending.

An amateur extra exam these days covers information a lot more current than that on the exam just a few decades ago. Perhaps instead of harping on code as some indicator of intelligence, you should direct your efforts to having all hams retested on license renewal, to make sure they continue to be current with the state of the art in amateur radio. Or do you believe that de Forest era vacuum tubes are more relevant to amateur radio in the 21st century than integrated circuits?

When you place 100 or more posts a day, is that not a "crapathon"?
Sure it is.

You haven't the sense to see that Slow Code is returning your spams in kind
in an attempt to show you just how ridiculous you are.
You need professional help, Mork. Perhaps Woger will loan you his therapist.

hardly steve

most people are not so teribly concerned with spelling

indeed most people reconize that when all you have to offer is speling
mistakes you have NO real armguement to make

you are your own worst enemy. i could not make such a fool of you
without YOUR help and consent

I don't recall where I found this, but from my archives:

Uniden Bearcat 55XLT Information

The radio is a basic 10 channel scanner. Nothing fancy. If you
disconnect wall power and it doesn't have batteries in it, it will
lose its memories.

It uses 5AA batteries. If you put NiCd's in it, you can flip a switch
in the battery compartment and they will charge when you plug it in.
(If you use an external charger you don't have to the flip the switch.
Leave it on Alkaline.)

The keypad switch "locks" the keypad so you don't accidentally press a
button and change your settings.

To program:

Turn on radio.

It will be in scan mode. Press Manual (orange button) to stop scanning.
Press Manual button to step through channels to get to the one you want.
(Or press channel number and then manual button)

If "LockOut" is displayed it means this channel isn't being "Scanned."
You will want to lock out the NWS WX (National Weather Service/Weather)
frequency. Pressing Lockout will toggle the status.

To program:

Select channel. Use keypad to enter frequency. Use "E" for Enter
key. If the radio displays an E this means Error. Usually, the
frequency you typed in is outside of the capabilities of the scanner.

Once you hit the E you will immediately start hearing anything that's
out there on the frequency you entered.

Push the "Review" button and the scanner will display the frequency
that is programmed for the channel. A "-" will be displayed for the
decimal point.

Code is just one part of it. Here's my four step plan that will keep
ham radio from becoming like CB:

Step 1: No more automatic renewals. Individuals must retest and
pass all elements required for their license class.

Step 2: The passing score for written exams needs to be raised to 85%.

Step 3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

Step 4: Make the no-code license one year non-renewable.

I'm searching for Michael Agner. From what I can tell, he is very active in the Scanner hobby. I see his name all over the place except for here.

I served with a SSG Michael Agner in Korea in 1974-1976 and need to know if this is the same fellow.

If anyone knows how to contact him, please have him contact me at: rich@richgreene.com. Thanks.

P.S. Too many idiots online to use my real Nyms. Now I'm 'nobody' but I can be 'somebody'.

5886. Newbie Reporting

Newsgroup: rec.radio.scanner
Date: 2006-11-08 04:06:13 UTC
From: Nobody <mynameisnobody@bullshit.bs>
Message-ID: <eoaks.bg5.19.1@news.alt.net>
Source record: 4766

Hi all. My name is Rich Greene and I've been involved in scanners since back in the days of the old Bearcat crystal scanners and I had one of the first portable scanners. I was in this newsgroup a few years ago and somehow forgot to pick it back up in between software changes.

It's refreshing to see a un-moderated newsgroup without all the crap and trolls. From what I can tell here, everyone is pretty much serious about their hobby. I hope I can be of some help. I never throw any scanning software or frequency listings away. I also have several old portable scanners. A couple take crystals. I need to know if it's appropriate for me to advertise them for sale or trade on this newsgroup. I have a portable and desktop/AC/DC that I now use and don't need all the extra crap. I also have a few extra BNC antennas.

I live in Olathe, Kansas and would like to meet other scanner folks in my area. Just send me an email: rich@richgreene.com.

For the past 15 or so years, I've been trying to compile the Mother of all Frequency Lists. I get started and stop and lose what I've done. It wouldn't be of any use now anyway with all the changes taking place.

I would like to know more about the 800 band changes taking place and which scanners will be obsolete when the changes are complete. I know there are some Radio Shack and Bearcat scanners that fall into that category. I've been tossing around buying another portable with more features to replace my Pro 83 which has served me well.

Now the big question: Is there a scanner out there that will scan all legal public frequencies? I think I saw one back in the old CB days (70's) that did that and you could either manually tune it or set up scan channels. I would love to have such an item but it would have to have a feature so you can use your PC to load and unload frequencies and keep a database of sorts.

Now in your opinion, and I know this has been asked in the past, what scanners are the best on the market - both types - portable and ad/dc? I know people have different opinions and tend to be loyal to one brand regardless of features. Other than the scanner above, I would like to have the latest features on both scanners.

I think I saw a request for Police Call CD's? I think I still have a few of the past issues and years if anyone is interested. I always purchase the newest edition. Years ago up in Washington, there was a fellow that compiled a local frequency directory which was really great. Although it's over 20 years old, most of the data is still active. That's what we really need. Good regional directories other than Police

Call which is hard to read. I would be willing to get together with anyone near me to compile such a publication for Kansas and Missouri areas. I'm retired and have a lot of time on my hands.

Thanks for your time. Future postings won't be as long and boring.

Rich

falcon1643106@yahoo.com wrote:

> a copy of the users guide?

It seems to me that this question was asked about four or five months ago, but I can't find it now.

The BC55XLT was also sold under the Radio Shack brand name It might have been a PRO-38, a PRO-39, or a PRO-41. Some pix:

Brett's Scanner Photo Gallery
http://n7olq.home.att.net/Radio/Galleryframe.htm

http://scanpix2.home.att.net/BC/bc55xlt.jpg

http://scanpix1.home.att.net/RS/pro38.jpg

http://scanpix1.home.att.net/RS/pro41.jpg

The PRO-41 appeared on page 22 of the RS 1993 catalog; it had SKU number 20-301, and it sold for $119.99. The point is that you might be able to find a user manual at the Radio Shack website, download that, print it, and use it as your BC55XLT user manual.

5888. My Take on CW

Newsgroup: rec.radio.scanner
Date: 2006-11-08 04:26:22 UTC
From: ToeJam <toejam@bigfoot.kn>
Message-ID: <eobqm.flm.19.1@news.alt.net>
Source record: 4768

The need for CW has been waining for many years now and technology has eliminated a need for it. Why do we still need CW? How many Hams still use CW? I think technical knowledge far outweighs the CW requirement. If it's eliminated, more people will PROBABLY take the test, however, you must also understand that it takes a lot of money to set up a proper station, and an operator that's devoted to the hobby. I don't think you will see a lot of folks running out purchasing $1000 Yaesu's and Kenwoods to get on the air if CW is eliminated. The FCC eliminated the requirement for a fricken CB license (KABE 1356) long ago and you sure don't see folks yapping away on CB's. They have cell phones now to communicate and GPS' to know where they are going. I have a couple GMRS/FRS radios and even paid the $80 FCC license fee. I believe in being legal. It doesn't pay to get caught and fined.

Therefore, if CW is eliminated, I do not think it will harm Ham Radio one bit. Things change with time. There won't even be an exam to talk on Ham frequencies in the future either. You young folks may see that happen. The cost of equipment will keep those that only want to screw around away from the hobby, believe me. Cost is one of the reasons I haven't got a ticket. I had a good friend of mine that had a Technician Class license (WB7RFL Tom Buckner, deceased) that was willing to teach me what I needed to know. However, the sheer cost of equipment kept me out of it. Anyone looking for a couple Cobra CB's? One is SSB.

Besides, what are all of you Ham operators afraid of? Sure you had to take the CW test and passed. Like I said, things change with time. Take a young person interested in the hobby and teach them the proper way to operate and pass the exam. QRT.

You could have fooled me. From what I see here, there are more Ham related postings than Scanner postings. Are you jummping all over the other folks that are posting Ham related material too? Or did you just get up on the wrong side of the bed? I'm not new to Usenet and don't normally post off topic material, but when I see more postings concerning a subject not related to the newsgroup, I figure maybe folks gyrated from scanners to Ham. So don't go preaching to me with your shitty attitude. You could have phrased your response a bit kinder instead of being an asshole about it. I'll lurk and see how you personally deal with the other Ham related postings. And FWIW, Scanners are strongly related to Ham radio, always have been and always will be.

He's too white, and way too old. Under 18 is too young, of course (gay sex
with teens is illegal, even in Canada, but straight sex is fine (as young
as 14), as long as there's no power imbalance involved...Hypocrisy? Nah.
Why would you think that?). At any rate, some non-white twink is more my
speed.

The test will continue to dumb down because ham radio is dying. There's a new radio game in town, its called cell phone. Like it or not anyone can get a license to use them.

I've been in ham radio for over 30 years. The same discussion is going on today as was when I first started. It has never been settled and never will to satisfy all. Equipment prices will skyrocket as the number of hams continues to decline. In fact they already have. I laugh when I see radio's like an IC-706 that someone is trying to sell on Ebay for $900 plus when only a few years ago new ones were being had at Hamvention under $600. Radio is dying folks enjoy it while the government allows us to have it. There is no "use" for all the Techs anymore.Allthis brainpower should be put together to find a use for your existence instead of continually hashing the same old dead beaten horse.

Scanners and listening to the cops will die out too. Each police car will
have a wireless broadband set-up and the individual cops will carry around a
wireless link device to communicate to the computer in their car and that
will be "THE END" for scanners!

The handwriting is on the wall!

Yes there is a difference between the parties. Here's what you get with
the democrats:

Defeat in Iraq,
Higher taxes,
Much Much larger government,
Renewed attacks on morality, religion, free speech and gun rights,
Higher inflation and unemployment,
terrorist attacks on our own shores again,
a loss in private property rights,
thousands of childen murdered by being sucked from the womb with a
vacuum....

Let him do it,Jail is the best place for him.
****

The bottom line remains. No-Coders should salute their superiors and should
give up their chairs as a matter of courtesy.
Doing so is a simple show of respect.

No-Coders should be made to stand at the back of the room until they can
pass no less than 5wpm. Then, and only then, will they be allowed to come to
the front to whine.

I'm trying to figure out the encryption on our local Sheriffs department 400mhz public safety band, our local dispatcher goes to 100 to switch to the encryption, it garbles the transmissions to the normal scanner user I use 2 hand helds a Pro-93 and a Uniden BC80XLT. Any help would be greatly appreciated.

Incorrect .... knowledge is NOT illegal, its the implementaion of such knowledge

example ---> knowing HOW to build a BOMB is not illegal, Building one IS.

I was asking for knowledge first of all because I've never heard of that encryption before. I don't need to listen to it, I was trying to get info on it never heard of that encryption before. Where I used to live didn't Excrypt their traffic at all. Bill seriously take a breather.

Radio Shack's site doesn't seem particularly useful. The "Radio Shack
Scanner Modification Page" at

http://www3.sympatico.ca/len.c/rsmods.html

shows the PRO-2035 has RS SKU 200-0460. It provides a link to

http://support.tandy.com/support_electronics/16587.htm

but that no longer works for me.

StrongSignals reviewed the PRO-2035. In his review, Rich Wells
discusses programming. His review may be what you need.

http://www.strongsignals.net/access/reviews/reviews.cgi?type=display&rtype=rev&class=recv&num=011

or

http://tinyurl.com/y55kls

He also has a separate page for the PRO-2035.

http://www.strongsignals.net/access/content/rr_pro-2035.html

Radio shack has ceased to be an electronics store long ago.
It is now just another redundant home electronics and telephone store.
I am amazed that anyone buys anything in there anyway.
If you need a telephone or a DVD player or similar you can
get the same item or better at WalMart for half the price they ask.
The people who staff it from local management to the pimply-faced
teenager wouldn't know WTF a resistor is, let alone a shortwave radio.
Heck, they have enough trouble looking up a replacement battery
for a cordless phone which are grossly overpriced as well.

In three years I see them declaring Bankruptcy and dissappearing
from the USA retail scene. Good riddence to as their recent management
all but killed off their most dedicated customer base years ago.

I'm no lover of RS and agree that they slowly circling the drain. However, before people post this crap, you should go to their web site and look before believing some urban legend web site. If you did, you'd see scanners and shortwave. Not a lot but they are there.

When did the gov't. pass this law and who enforces it?

Don't say the FCC because they only regulate transmitters, not receivers.

It is a FEDERAL crime to 'use' a descrambler to intercept transmissions that
are NOT your own. Hence.... if you owned a taxi cab company and wanted to
scramble your transmissions to the cars.... you can legally do it. However
if you 'used' that descrambler/ scrambler system to intercept police or
another business transmissions you are in violation
of the law.

thats right as long as you are only suppying information your fine
if however you KNOW he is 'going' to be doing something illegal
then your an accomplice.

For all you know he is learning to be an engineer that works on this stuff
and is just furthering his education. Stop and think about that for a sec...
HOW do people LEARN to build these new circuits and equipment ?
They have to learn it somewhere..... If learning was a crime we'd all
be living
back in caves.

Maybe so, but they did fire their CEO fairly recently. He was the one
who had a bogus degree in Theology, as if that was what was needed to
run a business like theirs.

To insure that the oscillator in the radio doesn't transmit those oscillations beyond a certain distance from the receiver. The FCC will never tell anyone what they can or can't listen to. The airwaves are "FREE" and anyone can listen to anything that they want. The problem only comes when you repeat what you hear on police frequencies. Plus unscramblers are not receivers, only an audio accessory to a receiver. The Feds only investigate people SELLING modified receivers for cell phones, not the buyers.

The air waves are not "FREE" anymore if that were true scanners would still
be sold with
cell coveraqge

And its the communications act of 1996

(g) It shall not be unlawful under this chapter or chapter 121 of this title
for any person--

(i) to intercept or access an electronic communication made through an
electronic communication system that is configured so that such electronic
communication is readily accessible to the general public;

(ii) to intercept any radio communication which is transmitted--

(I) by any station for the use of the general public, or that
relates to ships, aircraft, vehicles, or persons in distress;

(II) by any governmental, law enforcement, civil defense, private
land mobile, or public safety communications system, including police and
fire, readily accessible to the general public;

(III) by a station operating on an authorized frequency within the
bands allocated to the amateur, citizens band, or general mobile radio
services; or

(IV) by any marine or aeronautical communications system;

(iii) to engage in any conduct which--

(I) is prohibited by section 633 of the Communications Act of 1934;
or

(II) is excepted from the application of section 705(a) of the
Communications Act of 1934 by section 705(b) of that Act;

(iv) to intercept any wire or electronic communication the
transmission of which is causing harmful interference to any lawfully
operating station or consumer electronic equipment, to the extent necessary
to identify the source of such interference; or

(v) for other users of the same frequency to intercept any radio
communication made through a system that utilizes frequencies monitored by
individuals engaged in the provision or the use of such system, if such
communication is not scrambled or encrypted.

(4)(a) Except as provided in paragraph (b) of this subsection or in
subsection (5), whoever violates subsection (1) of this section shall be
fined under this title or imprisoned not more than five years, or both.

(b) If the offense is a first offense under paragraph (a) of this
subsection and is not for a tortious or illegal purpose or for purposes of
direct or indirect commercial advantage or private commercial gain, and the
wire or electronic communication with respect to which the offense under
paragraph (a) is a radio communication that is not scrambled, encrypted or
transmitted using modulation techniques the essential parameters of which
have been withheld from the public with the intention of preserving the
privacy of such communication, then--

(i) if the communication is not the radio portion of a cellular
telephone communication, a cordless telephone communication that is
transmitted between the cordless telephone handset and the base unit, a
public land mobile radio service communication or a paging service
communication, and the conduct is not that described in subsection (5), the
offender shall be fined under this title or imprisoned not more than one
year, or both;

Hmmm sounds like the FCC (federal law) IS telling you what you can and
can not listen
to.

Do you know what "not be unlawful" means? It means it is legal to:

(i) "It is legal to" to intercept or access an electronic
communication made through an
electronic communication system that is configured so that such electronic
communication is readily accessible to the general public;

(ii) " It is legal to" intercept any radio communication which is
transmitted--

****

I rest my case!

Not you need to rest.

"direct or indirect commercial advantage or private commercial gain"
Does not apply to any average "Joe" listening to a radio and not scheming to
make a buck from what he hears!

>
> Hmmm sounds like the FCC (federal law) IS telling you what you can
and

>
Hmmm sounds like you need a little legal refresher course. The Germans did
not win WWII, by the way. The airwaves are still free as you posted in the
previous post. Get a reality check and take a nap before your "feeding
frenzy" causes you to stroke-out!

5994. Need help for AOR AR16B

Newsgroup: rec.radio.scanner
Date: 2006-11-13 18:14:01 UTC
From: Sergey Martynov <ra3tmo@rol.ru>
Message-ID: <ejad8i$5t7$1@news.rol.ru>
Source record: 4626

Dear Sirs ,

We are members of a Children's Radio Club and we are pleased to say that we use some of your devices.

I would like to ask you to help me in the repairs of radioscanner AR16B (Ser.#050634).

We have the following problems.

1.. In all modulation modes when buttons "Start", "Func", "Moni" are pressed all the readings in the display disappear.
2.. NFM mode does not work. S-meter shows the presence of the signal but there is no sound in the loud speaker even when the "Moni" button is pressed.
In WFM and AM modes everything works OK besides the defect indicated in item 1.

What element's might not work properly?

Could you possibly send me the schematic diagram of AR16B?

How made reset processor of AR16B ?

Thank you in advance.

Respectfully yours,

Sergey V. Martynov.

Sarov , Russia.

your a riot

READ the wording and use your head and common sense when reading it

IT SAYS :
(v) for other users of the same frequency to intercept any radio
communication made through a system that utilizes frequencies monitored by
individuals engaged in the provision or the use of such system, if such
communication is not scrambled or encrypted.

Yep its LEGAL ..... IF communications ARE NOT ENCRYPTED or SCRAMBLED

John I think your HOPELESS you read into things WHAT YOU WANT THEM TO
BE .... not what they are.

If the airwaves were 'free' there would NOT be any laws governing their
RECEPTION
but there is (cell phones, cordless phones, pagers etc) You need to
read the NEW communications laws since 1934 (it has been added to and
things have changed since
then ..... but since your still concerned about WWII (which was 60+ years
ago)) New things seem to elude you.

Have you ever heard of anyone arrested or convicted of unscrambling a
scrambled message?

Are the FBI agents going to "bug" every home in America with listening
devices to see who unscrambled a message?

Is your name really Chicken Little yelling the sky is falling?

Get a grip, any laws are aimed at criminals and those who make and sell
communications equipment and not the average individual in his own house
listening to the scanner.

Take your lithium.

Man are you wrong about the prices. The Boston Accoustics HD radio they
are selling for $399.00 I can get one at an electronics store on line
for $224 with a $100 plus cut and a $75
rebate, making the final price $224. Man what a rip-off. Their prices
come no where near to
prices you can get at the large electronic discount houses. But you
have to search for these bargains, and they're are worth. I agree with
the guy who said their salesman know nothing about electronics. They
give you a strange look when you ask them simple basic questions.
So long Radio Shack!

I know you're right. Requiring good operators will kill the service.

Hams just want to be appliance operators these days and they don't want
license exams that will interfere with them getting to those appliances
even though it means being less skilled. I don't see anyone modernizing
like everyone says is happening. They just get their licenses and grab a
microphone. What percentage of hams have a computer connected to a
radio? Probably less than 30%. Hams don't want to modernize. Guess we
just have live with inferior operators on the bands from here on out.
Then again, maybe hams shouldn't be required to be knowledgable or have
skills. Requiring skills and knowledge is too old skool. Everything must
be outcome based these days, even licensing. It ain't like we have to
help out in emergencies or anything. It's Quantity, not quality. We need
more hams even if they aren't skilled.

COOSN-029-06-71069
Supreme High Overlord of rec.radio.*
Chuck Lysaght: Tarred & Feathered!

"Q: What do you call someone in the White House who is honest, caring, and well-read?
A: A tourist." -- Anonymous

"It would be offly hard for any of you to abuse me on usenet. Really. I have the advantage. I could easily turn alt.usenet.kooks into a cesspool of encoded posts. Bringing the noise ratio up so high as to make the group worthless. Anybody who can code could do this, why nobody has bothered before now is beyond me. The ultimate spamming engine.. 'BAWAHAHA'" -- Dustbin "Outer Filth" K00k's delusions of grandeur reached new heights, in Message-ID: <Xns98355D29419B9HHI2948AJD832@69.28.186.121>
"Immorality: The morality of those who are having a better time." -- H. L. Mencken

"Consider that language a moment. 'Purposefully and materially supported hostilities against the United States' is in the eye of the beholder, and this administration has proven itself to be astonishingly impatient with criticism of any kind. The broad powers given to Bush by this legislation allow him to capture, indefinitely detain, and refuse a hearing to any American citizen who speaks out against Iraq or any other part of the so-called 'War on Terror.'

"If you write a letter to the editor attacking Bush, you could be deemed as purposefully and materially supporting hostilities against the United States. If you organize or join a public demonstration against Iraq, or against the administration, the same designation could befall you. One dark-comedy aspect of the legislation is that senators or House members who publicly disagree with Bush, criticize him, or organize investigations into his dealings could be placed under the same designation. In effect, Congress just gave Bush the power to lock them up." -- William Rivers Pitt

"It has become clear in recent months that a critical mass of the American people have seen through the lies of the Bush administration; with the president's polls at an historic low, growing resistance to the war Iraq, and the Democrats likely to take back the Congress in mid-term elections, the Bush administration is on the ropes. And so it is particularly worrying that President Bush has seen fit, at this juncture to, in effect, declare himself dictator." -- Frank Morales
http://www.uruknet.biz/?p=m27769&hd=0&size=1&l=e&fark

"No man in History, including JESUS CHRIST, has directly revealed to the World the SATANIC WEAPON used to enslave mankind -- INTELLECTUAL THOUGHT!!" -- Ray Karczewski repeatedly proves his words in every post he makes

Simple solution to this one 'honestjohn' in the filter list

BTW Attorney Honest John would be a THE prefix

But they don't give sheepskins to RETARDS

Watson W-901 Air Gainer. Purchased last week. Like new condition w/plastic
sleeve.
http://www.radioworld.co.uk/~radio/c...na-p-4098.html

220 Mhz Ham Band Rubber Duck. Does a great job in the 225-400 Mhz range.
I've even heard some 260 Mhz FM MILSATS with this antenna!

Price for both is $35.00 shipped in CONUS

Cash or money order only (no paypal).....

Ah, no, you're failing to recognise that some homo/biphobe in RRAP is frogging Mark to make him look worse than he is (a winner of the Golden Killfile, for July/August 2006, due to his extreme dullness), solely because Mark is a (dyslexic) bisexual who won't keep it secret, so as not to make all the secret homo- and bisexuals in that froup uncomfortable.

A: A tourist." -- Anonymous

"It would be offly hard for any of you to abuse me on usenet. Really. I have the advantage. I could easily turn alt.usenet.kooks into a cesspool of encoded posts. Bringing the noise ratio up so high as to make the group worthless. Anybody who can code could do this, why nobody has bothered before now is beyond me. The ultimate spamming engine.. 'BAWAHAHA'" -- Dustbin "Outer Filth" K00k's delusions of grandeur reached new heights, in Message-ID: <Xns98355D29419B9HHI2948AJD832@69.28.186.121>
"Immorality: The morality of those who are having a better time." -- H. L. Mencken

"Consider that language a moment. 'Purposefully and materially supported hostilities against the United States' is in the eye of the beholder, and this administration has proven itself to be astonishingly impatient with criticism of any kind. The broad powers given to Bush by this legislation allow him to capture, indefinitely detain, and refuse a hearing to any American citizen who speaks out against Iraq or any other part of the so-called 'War on Terror.'

"If you write a letter to the editor attacking Bush, you could be deemed as purposefully and materially supporting hostilities against the United States. If you organize or join a public demonstration against Iraq, or against the administration, the same designation could befall you. One dark-comedy aspect of the legislation is that senators or House members who publicly disagree with Bush, criticize him, or organize investigations into his dealings could be placed under the same designation. In effect, Congress just gave Bush the power to lock them up." -- William Rivers Pitt

"It has become clear in recent months that a critical mass of the American people have seen through the lies of the Bush administration; with the president's polls at an historic low, growing resistance to the war Iraq, and the Democrats likely to take back the Congress in mid-term elections, the Bush administration is on the ropes. And so it is particularly worrying that President Bush has seen fit, at this juncture to, in effect, declare himself dictator." -- Frank Morales

Mark would make everyone in my neighborhood "uncomfortable." It is more
how he would disgust them to death that I would worry about though.

Now, I am unsure of the number of men who would enjoy a nice brandy and
discussion with mark about how to establish proper manners, education
and providing good role models for our developing teens--so their lives
are given the "best possible chance" of being enjoyable, stable, sane,
and with fewest possible hazards to traverse; but, I would NOT.

Frankly, it would make me uncomfortable!

> Great if you have to pray to god to make the payroll.

Good point! An excellent example of the above is
Trinity Broadcasting Network or "TBN" as it is called.
Right now it's their 'pledge week' where they have the
unmitigated gaul to ask for people to send them $100
or $200 or $500 or $1000 because "Jesus wants you to
sow your seed faith gift and receive a FINANCIAL BLESSING
in return...." What a load of vine-ripened horse shi+ !

You have to admit however that TBN does know how to rake in
the cash from all those people living in trailer parks all across
America! I mean they got the overweight sweaty black preacher
man, the tall & good looking white guy in the $700 suit, the
short blond haired 'golden boy' preacher who is concerned
about America and finally the fat bitch in the OUTRAGEOUS
HAIRDOO complete with mascara that runs down her face
when she cries the blues 'about the chill-drens'.

Couple all of this with a blues band and a sound stage backdrop
that looks like the inside lobby of a New Orleans Whorehouse
1 block off of Bourbon St and you got all the makings of a TRUE
GENUINE AMERICAN WHITE TRASH moneymaking machine
for Jay-zeeeeus!! (Praize da Laaawwwwwddddddd Y'all!!)

--> AND ALL WE GOT ON SHORTWAVE IS FREAKIN BROTHER STAIR !

I mean folks....I could just shit a brick. :)

Do you go by little-piss-ant on CB too?

Really, CB is a dead-end street, if you want to process further than the
rules allow, you have to be illegal. On ham radio you can do lots of
things legally. Learn CW, make something of your self. Don't be a loser
all your life.

> Mark would make everyone in my neighborhood "uncomfortable." It is more
> how he would disgust them to death that I would worry about though.

Only the closet cases and the repressed ones would feel "uncomfortable".
Everyone(tine) else would be okay with it, because only the former two
types might have any reason to feel that way. Sexuality is perfectly
normal, and those who are secure in their own aren't uncomfortable with
anyone(tina) else having a different one.

> Now, I am unsure of the number of men who would enjoy a nice brandy and
> discussion with mark about how to establish proper manners, education and

>
> Frankly, it would make me uncomfortable!

Oh, well, in that case, I'd best inform you that I'm bisexual, too. Nor
do I hide it. Nor am I the only queer kookologist, though there are many
straight ones.

_____
Hail Eris!
Demon Prince of Absurdity

"And no, I did not have sex with my son. But if I did I certainly
wouldn't tell you. Something so beautiful and precious should be kept
private." -- Kathy L. Mosesian, or possibly not really her, confesses
she may be a liar and committer of incest with her own son, in MID:
<cfcd3f4660694e3afeaadaa2723e9ab1@msgid.frell.theremailer.net>

The reporter asked Colin Powell (or George Bush), "What proof do you
have that Iraq has weapons of mass destruction?"
He replied, "We kept the receipts." -- Bill Hicks

"They thought I was fair game. I was an instrument of purpose to achieve their desires and not 100 percent real and ALSO that they had me by the short curlies because I thought that the world revolved around them and therefore I think that I am fair game and rightly so. If they want to play dirty, I get to too. It's not a one-way street. I will use the physcial strength that I have over them, my superior 5'7-3/4" height advantage, the boxing moves I paid to learn, the suprise of pussyfooting up to them with their back to me in a public place 18 1/2 years after the fact and thus not only do will they not know that I am but a pica's distance away from them, but that I even exist on earth." -- Chris Tsao is secretly John Wentzky's psychic twin. MID: <1161246083.152300.195760@m73g2000cwd.googlegroups.com>

Looney Maroon nominee for August 2006 Johnny D Wentzky foamed:
"You never asked someone who goes into areas of the internet that are only for adults who has an underage id somehow or another if they are a cop posing as an underage person online?
I guess lots of people just don't watch dateline or read stories much. Why don;t you go to pervertedjustice,com and see what they do. They are awash in their self-proclaimed glory after they lied to membners of the public.
They are awash in their self-proclaimed glory after they posed as an underage person and agreed to do all sorts of sex acts wioth adult males, and they are adults posing as teenager themselves. They make themsleves into liars by falsely impersonating underage persons and by not fuilfilling the words they tell the victims online in their chats. Why don't you read it where they tell these victims of their deceit about how they have been with grown men and such? Why don't you read it where they say, "That would be cool." after someone makes an advance towards an adult who is posing as a teenager? And, where they agree to meet the person, etc.
Lost control, didn't you?
Is that why you feel as if you need to lie so much now? I see where lots of these false impersonation games are not sticking. They feel as if they can lie and then order the victims to get counseling in the gayblade, governmental, pro-choice tax leech counseling centers. They are doing nothing more than usury and fraud in many cases." -- Wentzky almost comes out of the closet as a pedo/ephebophile in MID: <H%%Eg.28916$Uq1.22411@bignews6.bellsouth.net>

One can always tell it's a froggery because Mark's blog is deliberately misnamed, and "Gav" is obviously Wabbit. Given such obvious sock-puppetry, would any of my colleagues care to investigate further, and possibly make an OotHS nom? I would, but this is another award that I've already covered.

"Immorality: The morality of those who are having a better time." -- H. L. Mencken

"Consider that language a moment. 'Purposefully and materially supported hostilities against the United States' is in the eye of the beholder, and this administration has proven itself to be astonishingly impatient with criticism of any kind. The broad powers given to Bush by this legislation allow him to capture, indefinitely detain, and refuse a hearing to any American citizen who speaks out against Iraq or any other part of the so-called 'War on Terror.'

"If you write a letter to the editor attacking Bush, you could be deemed as purposefully and materially supporting hostilities against the United States. If you organize or join a public demonstration against Iraq, or against the administration, the same designation could befall you. One dark-comedy aspect of the legislation is that senators or House members who publicly disagree with Bush, criticize him, or organize investigations into his dealings could be placed under the same designation. In effect, Congress just gave Bush the power to lock them up." -- William Rivers Pitt

"It has become clear in recent months that a critical mass of the American people have seen through the lies of the Bush administration; with the president's polls at an historic low, growing resistance to the war Iraq, and the Democrats likely to take back the Congress in mid-term elections, the Bush administration is on the ropes. And so it is particularly worrying that President Bush has seen fit, at this juncture to, in effect, declare himself dictator." -- Frank Morales

No offense taken. And yes, if you turn your filer off or use another
reader, you will see a flood of HAM related material here, more so than
scanners. It actually took me by surprise to see so much. I usually
try to stay on topic on Usenet but with this newsgroup, it's hard to

tell what the on topic discussion should be about. Later.

It provides an incentive to keeping studying and building radio skills so you can graduate to a more permanent higher class license. Those that fail to upgrade, no loss, we don't need them anyway. We want quality operators. If you want quantity, go to CB.

I know what you're both saying is true. Since ham radio has been dumbed
down I'm hearing a lot more Lids, Kids, and space cadets on the ham bands
too and radio's don't come with Lid filters. We need to keep CW and
increase the speed requirement to somewhere 13 and 20 wpm. We can't risk
dumbing down the service further.

Tnx, 73, Good luck in the contest.

No matter what facet of radio you enjoy, the topic is to protect it by improving the quality of the hobbiests involved. That's why most will agree if you know morse code, you'll be a better skilled hobbiest and will improve your nich of the hobby and/or radio service you're involved with. A valuable knowledge base for those of coming into the services and hobby.

Tnx, 73 Good luck in the contest.

Can't happen because it's not P.C. (politically correct). Would you want to
be guilty of discrimination against retarded CBers? Hell no! So chill,
dude.

You know, CW may be obsolete, but having to learn the code instilled a bit of discipline and sense of purpose in getting a ham license. Of course things like mathematics, science and such that require mental discipline are no longer politically correct so are generally not required in education today because we certainly don't want to bruise anyone's ego or tax their MTV indoctrinated brains. So, I guess the code will have to go.

It isn't so much the "code" being removed which has dumbed it down, it used to be you "had" to know electronics to get a license. Blame it on the Study Guides which really don't teach SHIT.

Personally, instead of seeing this CODE argument going on forever and not solving a damned thing, using the above post of the other necessities of life - if you intend to get anywhere - let's argue - and understandably so and more welcome than the code argument - why the classes are being dumbed down for our kids! Around here, the schools are wanting to build near professional sports arenas and I'm speaking "millions of dollars" - for the "Football" games - to hell with the studies. They "used" to give you basic supplies when you went to school, now you buy your own. The "School Board" seats are more hotly contested than some of the "State and Local" government seats. Yet the education level isn't improving.
No child left behind? Eh, not if they're foot ball players. IF NOT - they're screwed.

Just my 2 cents.

I know this is getting OT, but I agree. Ever see the stats on what the school board people and administrators get paid compared to teachers? Ever look at the ratio of school board administrative staff to teachers? In New York some years ago investigative reporting indicated that there were approximately 7 administrators per teacher and most had "company" cars. Now we know where the money goes and why real education doesn't matter.

Regarding testing for a ham license, I think that is a good idea. I
just think we should be testing for skills that show some ability by
the operator to set up and operate a rig safely. And we should test
his ability to communicate effectively and courteously in a widely
used form of communication that can be understood by emergency
responders: voice.

I don't know about your area, but mine has two distinct tracks for
kids. Those that are headed for a college education receive various
levels of advanced classes based on ability (more or less). Those that
are on the vocational track receive math and english at a level to get
them past NCLB requirements and the equivalent of shop classes. The

stadiums are for the most part outdoor with bleachers looking over a multipurpose playing field that has a running track around it. And this is one of the higher income areas of the country.

I do agree that sports in high school and college can be taken to absurd levels of importance. In many locations, especially urban ones the high school is essentially a farm club for colleges which are a farm club for major league sports. I would love to see the system taken back several notches but there is too much money at stake for that to happen.

Regarding the "education". They teach "some" college level prep classes. As to those with lesser ambition/grades, they have "classes" - period. There is "Vo Tech" - but you had to have a certain grade average to get in "there". As to shop, one school I know of - sold all their shop equipment years ago - that being the same school "I" went to and got my start in electronics training. I've never heard much of other schools having "shop" class around here. The "stadiums" at some of these schools here reach into the "millions" of dollars, upping the taxes on all who live there. Those stadiums are damned close to being equivalent to a "Pro" Field. Hell, our local "state" University doesn't even match some of them. That is pathetic. Yes, kids need sports to teach sportsmanship and competition, but come on - "EDUCATION" being "reading, writing, arithmatic" and so on are more important. AND as I said, they fight for school board seats hotter than some local and state government races. It is "sickening".

They've eliminated the "Wood, Electronics, Metal (including welding) and Electrical" shops here. Now, I realize "Electronics" may not be as hot to some as it once was, but it still has value in our country. So too does "Electrical" systems/wiring, "Welding", etc. Do we not need "skilled" labor

anymore? No wonder this country is going to hell. Pretty soon all other countries will out smart us in every field. Those who were pushing "no child left behind" - need to get things back on track for "develpment" of "marketable" skills."
We're still going to need things wired, welded, soldered, electronics to mainain the "cell phone craze" and so on.

I realize most parents are working and unlike the past - at least one parent made sure we did our chores, studying and so on..... things have changed dramatically. They need to change dramatically again. Get these kids interested in something. Even computers seem to be falling out of grace with a lot of them - aside from chatting. I guess they equate computers to "work".

6086. Re: Radio Shack Black Friday Ad

The Black Friday website for Radio Shack shows a Pro-528 scanner listed
at $169 on sale for $99,

Brett

Definition of Political Correctness:

A doctrine fostered by a delusional, illogical liberal minority, and
rabidly promoted by an unscrupulous old media, which holds forth the
proposition that it is entirely possible to pick up a turd by the
clean end.

Right, That why there is CB. You don't have to know how it works you just
get on it and act stupid. We can't have ham radio be like that, we want
skill. Quality, not quantity.

I know a lot of you don't like that because it means more work, but we get
a higher quality operator.

Definition of Political Correctness:

A doctrine fostered by a delusional, illogical liberal minority, and
rabidly promoted by an unscrupulous old media, which holds forth the
proposition that it is entirely possible to pick up a turd by the
clean end.
////////////////////////////////////

Hmmmmmmmm

Not unlike what Katie Couric and Matt Lauer do on a daily basis. Or, for
that matter, what CBS, NBC, ABC, and CNN do daily.
When a Republican goes awry, the Media plasters it on Page One. When a
drunken Democrat does so, the Media lauds the Democrat for "getting help"
and calls it a "Courageous Step."
Chappaquiddick, anybody? Mary Jo Kopechne ring any bells?
Now, when it comes to "picking up a turd by the clean end", which end would
that put Senator Kennedy on?

6099. Uniden 330T Trunking Scanner - New

Newsgroup: rec.radio.scanner
Date: 2006-11-17 21:45:27 UTC
From: Rod Barton <cabletek73@comcast.net>
Message-ID: <W3q7h.3204$LN6.2399@newsfe11.lga>
Source record: 4579
Cross-posted to: rec.radio.swap,rec.radio.scanner

Available here before it goes off to ebay..

I've got a NEW in the box Uniden 330T portable trunking scanner..
Everything is in the box! Picked this up and decided the digital scanner
was the one I wanted (needed). The one has been out of the box for only a
few days, never off the desk here. Included also is Butel's ARC330
programming / visual scanner software for this unit. This is the "basic"
version of the software and was purchased by me so you'll get the activation
key with it in its original case.

I'm looking at $225 shipped / insured to your door.
I accept paypal and have feedback on ebay at cabletek73. Shipping is done
daily. (except Sunday ofcourse).

E-mail if interested.
Thanks!

6100. crapathon goes one

Get used to the QRM, because after CW is eliminated you're going to wish
your rig did come with Rettysnitch and wouff hong filters...

But I forget, due to the lack of support for good tests a lot of you
people must like hearing Lids.

I'm re-posting this because Markie took a crap on it last time and some of you might have gotten confused.

Step 1: No more automatic renewals. Individuals must retest and pass all elements required for their license class.

Step 2: The passing score for written exams needs to be raised to 85%.

Step 3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

Step 4: Make the no-code license one year non-renewable.

Tnx, 73, Good luck in the contest.

I have been wanting an emergency scanner for some time, but have not purchased one mainly because of cost, and not really knowing what is a good scanner that won't cost much.

I have the opportunity to buy a scanner from a friend and would like an opinion on if it is good or not. I live in a small rural Wisconsin town so I'm not sure if that matters with quality of scanner vs. frequencies. That said, the scanner my friend has is a UNIDEN BEARCAT 855XLT SCANNER for $49.95. Should I, or shouldn't I buy it?

Most likely it is a bad choice, depending on what you want to listen to, and
where you're located.

The BC855-XLT is a basic scanner for conventional analog systems. Most
public safety has at the very least upgraded to what is called trunking
systems, which require a trunktracking type scanner. The current trend is
APCO-25, which means it is a digital system, and requires a scanner that is
capable of receiving a digital system. (Not to be confused with a "Digital
Scanner", which can mean only that the scanner has a digital display, vs.
the older dial type tuner).

So to start with, what County/City/State are you in?

Bill Crocker

>
>
>
>

Well you're in luck! It appears that scanner will work for your needs. You must live in some small rural area?

Rhinelander:

FIRE: 155.055 MHz
POLICE: 155.250 MHz

Oneida County:

FIRE: 154.445 MHz
FIRE GROUND: 154.355 MHz
SHERIFF: 154.725 MHz
SHERIFF CAR-to-CAR: 155.640 MHz
EMS: 155.805 & 155.340 MHz

It's not a trunked system, nor is it digital. Just plain old conventional analog. So just about any scanner radio made should be able to receive those frequencies. Radio Shack has a few on sale right now, and a better sale taking place on Black Friday. So you might want to take a look at theirs too. They have both base/mobile, and hand-held units.

Hello all, I'm new to the group and I live in the tampa bay area. I have been listening to satcom for the past few years now and have really got some nice intercepts from the satellites. right now I listen to the 90 west satellite and the 105 west satellite. I first started out using a discone and found out that it did not provide and gain what so ever. when I was at Macdill airforce base and saw the antennas that central command was using, I said I want one of those. I did some research on how to build one. I went to the local hardware store to buy everything I needed. I built myself a 7 turn helix centered at 260mhz and I use a cable tv pre-amp on it as well. I have got some excellent results from it and the signal comes in crystal clear. I can hear several of the fleet relay transponders and clear comms, pirates talking and some russian phone relays. below is a list of my logs that I have monitored today.

265.550 NFM sounds like PSK
250.350 NFM Fleet Relay
250.550 NFM Fleet Relay
262.125 NFM Data/ Nightstalker Ops
261.575 NFM Data
262.425 NFM Secure
265.550 WFM Music
243.825 NFM Unid
267.550 NFM Unid
263.925 NFM Foreign Voice
244.150 NFM Unid
246.250 NFM Unid

Feel free to view my satcom homepage, comments and questions are always welcome.

I'm re-posting this because Markie took a crap on it last time and some of
you might have gotten confused.

Step 1: No more automatic renewals. Individuals must retest and
pass all elements required for their license class.

Step 2: The passing score for written exams needs to be raised to 85%.

Step 3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

Step 4: Make the no-code license one year non-renewable.

Tnx, 73, Good luck in the contest.

SC
.
Imagine what step #4 would do to two meter HT sales. The no-coders would be
selling them on Ebay at a record rate. Or selling them to fellow CBers.
Of course there is the added benefit of not having our local two meter
repeaters jammed up with no-coders telling one another, "You are full
quieting here.." (DUH??)
Simplex two meter freqs will be safe, however. Most no-coders don't know
what simplex is.

Hi Lardass no coder NOVFP Lloyd Davies. When are you going to upgrade your
license, after the code requirement is dropped? NO! You're too stupid to
pass the written part too!

Oh BTW, try eating a salad every now and then instead of all that pizza you
delivery boy lardass loser.

An imposter posting as N2EY? Not to be confused with N2EY posting
anonymously.

> >Now where do you stand on the K4YZ outrages?

> he never saw em

"Says" he never saw them.

Perhaps he should make the effort to review some before having more
normal relations with K4YZ.

Wouff Hong ???
Rettysnitch ???
WTF are we in the 19th Century here???
Baaaaaaaaa hahahahhahahahahhahaha!!!!!!!

Jeezus H Christmas on a rocket powered sled at the Nevada test site
will you OBSOLETE hams PLEASE join the 21st century.

I mean consider that the terms Wouff Hong and Rettysnitch
DO NOT even appear ANYPLACE on or within Wikipedia!

That alone should tell you something! (..of course now you
can be some crusty old fart, cloistered ham radio nerd or
some asshole who took the "Bash Book" route to get his ham
license will now dash up and create an entry in Wikipaeda
just to inflate his own ego and asscheeks and claim he did
something.....go ahead, be my guest! In the meantime I'm
heading back to 20 Meters to have some fun with the contest
freaks. I made up a callsign and semi-rare section and these
CLOWN-testers are beating a path to my speaker to work me
just so they can see their callsign in print in some half-ass
magazine from CT. How F-N pathetic!) ---> PFHBLTTT!!!!!!!!

ps: you should have seen how many DX clowntesters I duped
a few weeks ago using a "creative" callsign, section and running
10 watts into the 40M dipole instead of the beam...suckers!

On the day after thanksgiving the handheld model of this radio will be
on sale for $99. FYI

I tend to believe that right before you die in a fire is as bad as it can
get, but that's just me. "Assnated"....just exactly what is that? Is that
like when a big fat girl with a smelly butt tries to smother you to death?

Thanks for the info Allen, I was a regular monitor a few years ago (from Australia) and have a small collection of recordings from 261.950 MHz if I remember, some ICE flights and traffic from a military exercise on Guam (I think) from a few years ago - was using a discone and an Icom R7100 - will check out your antenna as I'm hoping to get back into it.

Well, I'm excited about learning code. I have been given some great
websites for practice. And I'm going to try to test in January 2007.
I don't know if I can be ready that quick - but I'm going to give it a
shot. Also, I have been encouraged by several hams to learn the
sounds as complete thoughts instead of learning just letter
recognition. A bit like learning to read, I guess - so I will try that
method. Thanks for the hints.

Mark, you cannot expect others to take you with a grain of salt if you don't expend the energy in a grain of salt to express yourself. You expect others to stoop to your level of comprehension. Why can't you elevate your level of expression to that of the rest of the world?

At present, you are doing the "crappie flop"....flopping around on the deck with no purpose, and expecting the rest of the world to figure out your intended meaning.

Allen,

I've heard some Spanish 2-way conversations on 263.825 NFM at around 9:30 AM from my location in NE Ohio. This was using my PRO-43 and 220 Mhz Ham Band rubber duck without a preamp!

Frank

It won't be that bad, a lot of no-coders will uprade. Only the sick,
lame, and lazy will get out and flood eBay with ham gear, but since the
sick, lame and lazy are like CB'ers we don't want them in the amateur
service anyway. They aren't motivated enough to improve it, or themselves.

If you don't care what the radio bands sound like, then you're probably a loser that wants to see code to go away. You don't care if hams are valuable. But if you do care about ham radio, you'll help me promote importance of have good operators.

So what's it going to be with you people? Quality hams? or Lids?

Markie ignore this thread, we already know you want more lids.

Good luck with it. :) We love helping people that want to good hams get a
license. That's a good point on learning CW. As you get better and
faster at it, you don't hear individual letters, you hear and your mind
memorizes the sound of whole words.

Markie will probably flame you for wanting to learn CW, but just ignore
Markie, he's a retard.

Umm, no. There are two radio items in the ad; here's what I sent to the DXLD Yahoo group:

Hi, all!
Got a Thanksgiving sale flyer from Radio Shack yesterday in which they list their special sale items for that day and the following weekend. On the Friday/Saturday/Sunday page they list the analog-tuning AM/FM/SW crank-up radio with flashlight and cellphone charger #20-238 at $19.99; this one has the RS name and not Eton on it, and the cosmetics are different from the Eton models. Regular price is $39.99.

There is also a handheld scanner #20-528 at $99.99 (regular $169.99); they don't mention what the model # is, not give any details of the frequency coverage, but they do say it is "Triple-Trunking" and has 1000 channels.

For what it's worth...

73, Will

Hi,

Anyone know anything about: SHARES (SHARED RESOURCES EMERGENCY SERVICES) ?

Looked in Google, but couldn't find much; what there was, wasn't all that
informative.
e.g.

- who/what they are ?
- frequencies and modes used ?
- much traffic on ?

It *IS* true. The Snopes urban legend web site has full details at
http://www.snopes.com/politics/sexuality/walmart.asp

Now that Miller Brewing donated $30K to the illegal alien marches of this past Summer, and now that Walmart has turned against family values, I've cut off doing business with both companies. Political correctness of that kind is endangering this country, and we have to fight it.

If that's true, I'm going to quit shopping at Walmart. I don't want my
>> money going to help Fags.
We don't need this crap in society today. Can't we all just live and
let live!?

> It *IS* true. The Snopes urban legend web site has full details at
> http://www.snopes.com/politics/sexuality/walmart.asp
Who cares!?
> Now that Miller Brewing donated $30K to the illegal alien marches of
> this past Summer, and now that Walmart has turned against family values,
> I've cut off doing business with both companies. Political correctness
> of that kind is endangering this country, and we have to fight it.
I don't drink miller anyways but no I don't agree with illegal aliens
getting made easy for them. If you think about it what are family
values? Stating that just because someone isn't Heterosexual that they
are a danger to your, kids, family, town, city, county, state, nation?
You ever thought that the havoc you are trying to cause over someone's
sexuality? Ever thought that all the trouble and havoc you are trying
to cause over the situation might be the true danger to what is all
American, what the United States is all about? One nation indivisible?
United We Stand?

Karnaj

Did you even bother to read the material at Snopes? Somehow, I don't think that you did, because you pulled out your prerecorded response immediately after jerking your knee.

I don't give a sh*t about your sexuality, but I do take great exception to the in-your-face promotion of homosexuality that the Gay and Lesbian Alliance is all about. Since Walmart has joined (literally) with them, I now take great exeception to Walmart.

There are a lot more of "us" than there are of homophiles, and Walmart is about to find that out. Walmart backed down from not using the word "Christmas" in their stores, and now they are about to get a second lesson in staying out of social politics. I predict that, by this time next year, Walmart will have dropped out of the Gay and Lesbian Alliance.

Maybe the christians should practice what you have just preached. I take great exception to the bible thumpers knocking on my door and telling me that if I don't join their church, that I'm going to burn in hell. And the onslaught of phone calls telling me that I need to let their god save me. How much more "IN YOUR FACE" can you get.

I have yet to have a homo get in my face and tell me I'd better bend over and get sodomized, or else.

Did YOU even bother to read what was written at Snopes?

The only money going back to GLBT was what was sold via the link from the GLBT websites, NOT from any other Wal-Mart store or online Wal-Mart sales. That sort of thing is done all the time, just like rebates from Discover card. It's a tool designed to boost sales. Period.

Either a troll or somebody who REALLY hates ham radio. Must be a troll, just look at his behavior here. Off-topic messages are just as bad as transmitting on an unauthorized frequency, something a QUALITY ham would not do. Blurts out insults when asked to back up anything he says, proving beyond a shadow of a doubt that he doesn't give a rats ass about ham radio then continues to pollute off-topic newsgroups.

SC is the type not welcome amongst good ham radio operators. He is just a simple obvious troll who is out to kill ham radio by making ham radio operators look so awful. A REAL ham would never act like such a boor.

Just a simple troll who knows nothing about radios in general nor knows how to use one properly. He has proven it himself.

Did you read it?? It said that it is "partnering" with the GLA to "promote diversity" and promote non typical gay marriages. Everytime I hear that buzz phrase "promote diveristy" I can feel the little hairs on my neck standing up, because what that really means is promoting non traditional values. Since I have a SuperWalmart within a stones throw of me, its going to be difficult not to go there but this tears it with me and no doubt hundreds of thousands or more of us lowly tradiionalists that happen to believe not only do words mean things but so do actions like this. They really are sticking their noses where they dont belong,,, no pun intended, and I think they are going to get bit in the long run.

Of course you are correct. But also unfortunately almost all news
groups are rapidly becoming socio-politcal-BS. About all you can do
is killfile the people who constantly post this crap, and maybe all those
that respond. But then you end up with a handful of people left who arent
killfiled.

The trouble with a code is that it is designed to keep people out. Once
you've learned the 'secret' code, it makes you feel that you have
something that you, and a select group of others can participate in.
Once you're up there, see how quickly you pull the ladder up.
Does a proficiency in CW make for a better operator? Yes, in a way. It
shows a studious interest in the hobby and is a worth achievement but
does it make a more courtious or interesting operator? Certainly not,
and this group is witness to that.
"People who don't use code are lazy", What? Is that the only discipline
available to allow someone to experiment with radio? Absolutely not!
How about learning electronics and building your own equipment? Is that
a lesser or a greater achievement?
How about taking the hobby forward by progressing and leading cutting
edge technologies? It was after all the amateur fraternity who brought
this new fangled SSB phone mode. Were are at the dawn of a new digital
age on all you people can do is look backwards and remain firmly rooted
in the seventeenth century.
Come on, wake up and smell the 21st century.

There is a 3rd option that I'm testing, you can filter key words or
phrases. If a message contains these words its filtered
like you could filter all messages that contain "Boycott Walmart" no matter
who sends them, but if that person wants to
post something 'normal' it comes thru. Naturally Slow Code and Markie are
permently killfiled, but I think this filter
system once set up (which might take a little while) should work good :)

The accusations that George Fetter defrauded people on the Internet is false. There were a couple of packages lost during shipment (with UPS/USPS tracking numbers), but the reason for the US governments false flag operation against George is because he monitored their communication channels.

SSB is a period stain on the panties of radio communication. I hate
SSB. I prefer narrowband FM, or AM even, for quality and lack of
annying squawk. Baudot RTTY is fun too.

Make people build something to get the General license and make them
show competence to where a two way or broadcast facility would hire
them for the Extra.

Can anyone help me with my decision on what Police Scanner to purchase? I almost purchased a Radio Shack Handheld Scanner until I realized it was an analog Scanner. No Good for me. I'm really new to the Scanner Thing and NEED some expert advice. I need to know what the name of a good unit (Handheld perferably) and where to purchase it from. But since I'm a newbie, any information would be greatly appreciated. THANK YOU IN ADVANCE FOR ANY INFO SENT.

Well, instead of a year, it only took Wal-mart a few days to back away
from their preposterious position. A threatened boycott seemed to do
the trick, just as I suggested in a previous post. Wal-mart is all
about profit; not principle, and they'll sell out at the drop of a hat.
The relevant excerpt is as follows:

"While stressing its commitment to diversity and equality, Wal-Mart (WMT)
said in its statement that it "will not make corporate contributions to
support or oppose highly controversial issues unless they directly
relate to our ability to serve our customers."

"Mona Williams, Wal-Mart's vice president of communications, said in a
telephone interview that the company would continue working with the Gay
and Lesbian Chamber of Commerce and other gay-rights groups on specific
issues such as workplace equality."

"Going forward, we would partner with them on specific initiatives. ...
As to opposed to just giving blanket support to their general operating

budget," she said. -- http://www.foxnews.com/story/0,2933,231259,00.html

See there? Stick up for traditional values, and these people cave in and run away. It's one more win for the good guys. We've got Christmas back at Wal-mart and gay marriage support is out on its derriere.

I love it when a plan comes together.

go to http://www.radioreference.com and look up the systems you want
to monitor to see if you require digital capable scanner. The best
radio for the money for digital and analog is the BCD396T or 996T
available at
http://www.usascan.com/files/scanners.html

I don't know why the owner is advertising a digital camera on the
digital scanner page, but don't order that! The price includes
shipping.

Wal-mart managers are mostly all cowards anyways and they fuck liars
to boot. Wal-mart should be force out of business for the good of
US women who they cheat regular on wages and promotions.

Seems I read in the paper a couple days ago that it cost about $25,000 to join and they donated another $60,000. Anyway, it was EIGHTY-FIVE GRAND!!! I'm not sure the exact way it was allocated. . . but it's probably on the net.

Remember K-Mart and their ownership of some porn producing or selling
shop? Currently out of bankruptcy, I think, but a lot weaker!

Remember Winn-Dixie who just got out of bankruptcy? They came out of
bankruptcy minus many thousands of employees, about 400 stores plus
warehouses and other assets! Oh, I still don't know if they have a
policy of calling the law upon seeing a parent correct a child according
to the Bible!

Wal-Mart probably thinks they are "too big" to be brought down a notch
or two, but notice what the Bible says. Isiah 40:15, "Behold, the
nations are as a drop of a bucket, and are counted as the small dust of
the balance: behold, he taketh up the isles as a very little thing." KJV

Note: The NATIONS are basically nothing to God - much less one business within one of those nations. I suspect "nations" can be taken individually or collectively! :-)

There was a time when Wal-Mart stock was splitting pretty frequently but I can't see it growing very much lately.

OK, finally made it over to Universal and picked up the November issue
of PopComm.

Of course Steve's letter was well written. He left out the homosexual
inuendo and excrement eating scenarios. He has one side he presents to
the world... but then there's the other side.

Anyhow, lots of words, a sense of urgency. With arms waving and flags
flying he mentions "jet training routes" "Missions for America"
"ultimate war fighting capabilities." Very important sounding stuff
from Major Steven J Robeson, K4YZ/KTN4GN, as usual.

So what was it all about???

Monitoring CAP FOUO communications.

I recall K4YZ/KTN4GN inviting people to monitor him and he would send
an SWL confirmation.

Hi! So much for FOUO.

Here's the little nugget from his QRZ bio page...

"""""
I am an active member of the Tennessee Wing, Civil Air Patrol, United
States Air Force Auxiliary with the rank of Major. CAP performs search
and rescue, disaster relief and other domestic "civil defense" type
missions on behalf of the U. S. Air Force. CAP was organized in the
late 1930's and was formally established on 01 December 1941 to provide
"homeland defense" type missions, and it continues that proud tradition
into the 21st Century.

My Civil Air Patrol callsign is "TennesseeCAP 250". I will QSL utility
SWL'ers if you catch me on one of CAP's HF or VHF frequencies.
"""""

Innocent of what? Innocent of being a megalomaniac with delusions of grandeur? Hardly. Innocent of having one of the worst balding "comb-overs" ever seen? Absolutely not.

BTW, if he" monitored their communication channels", do you think he heard them coming to get him? Sure hope so.

What you just said made me curious, so I hit up WWW.QRZ.COM for "Newport" and there are NONE in 4-land. There's one in Washington, two in five-land, and a handful of 'em in Canton, Ohio. His first post was on Oct 10th about "faggortry."

Wait a minute.... Didn't Robesin used to live in Canton, Ohio? Maybe Bob Newport is one of his ex-in-laws or something.

> well, he's down to the level of annoyance

He always was.

It's got to be incorporated into the exams then, otherwise hams aren't
going to learn and do it. If ham radio is to modernize hams must be
forced to modernize. CW isn't preventing the modernization of ham radio,
Laziness is.

Look at the no-coders on the repeaters. Many of them have been licensed
for years and they ain't moderizating. They're no better than they were
the day they were first licensed.

The passing score on written exams need to be 85% and double the number of
questions on each test element.

I push for quality hams. If you don't like quality there is CB. Let's
not turn the ham bands into CB

Thanks, Bill!

SC, There was an article about CAP in Popular Communications that addressed the recent change of federal policy on FOUO, or "For Offical Use Only" release of information on certain aspects of radio communication.

Part of that change has been for CAP to withdrawn any and all discussion of it's operating frequencies from cap.gov sites that aren't password protected for CAP members only. The author called into question the validity of that practice.

I made a point of suggesting that we as radio hobbyists need to re-think our liberal publishing of what we hear, even when we are only discussing the user, mode and frequency, not the actual content of the transmission.

And Bill...Morkie doesn't like me because at each and every turn of his attempts to lie, deceive and mislead, I've "busted" him over and over for those acts. Morkie doesn't like having his nose rubbed in his online misdeeds, yet continues to do it.

Thanks again for the kind comments. It wasn't, by the way, the first time in recent history that I've been "published" (not in the professional sense, obviously) in Amateur media. I've had several "hits" in CQ magazine since November of last year, and had an item I originally published in this forum picked up by "Worldradio" as a guest op-ed item a few years ago.

I have a Radio Shack Pro 97

Right now all that I am getting are my VHF frequencies and not my 800mhz.

I noticed that the VHF have a + below the chanel number and the 800 have a - (minus).

What did I push to create this problem? And how do I undo my mistake.

Thanks
Dave

The History Of The Middle Finger

Well, now......here's something I never knew before, and now that I know it, I feel compelled to send it on to my more intelligent friends in the hope that they, too, will feel edified. Isn't history more fun when you know something about it?

Before the Battle of Agincourt in 1415, the French, anticipating victory over the English, proposed to cut off the middle finger of all captured English soldiers. Without the middle finger it would be impossible to draw the renowned English longbow and therefore they would be incapable of fighting in the future. This famous English longbow was made of the native English Yew tree, and the act of drawing the longbow was known as "plucking the yew" (or "pluck yew").

Much to the bewilderment of the French, the English won a major upset and began mocking the French by waving their middle fingers at the defeated French, saying, See, we can still pluck yew!

Since 'pluck yew' is rather difficult to say, the difficult consonant cluster at the beginning has gradually changed to a labiodentals fricative F', and thus the words often used in conjunction with the one-finger-salute!

It is also because of the pheasant feathers on the arrows used with the longbow that the symbolic gesture is known as "giving the bird."

IT IS STILL AN APPROPRIATE SALUTE TO THE FRENCH TODAY!
And yew thought yew knew every plucking thing!

Dave,

The "+" is the OPEN MODE. The scanner scans signals transmitted in all systems.

The "-" the scanner stops on the signals that have an ID code that you programmed into the scanner. Like a number for a talkgroup for Motorola scanning. If you are scanning an EDACS system, you MUST have the frequencies in the correct order, usually what I do is place the EDACS system in one bank and start the bank, leaving the top channel in the bank empty. Like bank # 3, channel 300 is left unprogrammed.

To change the "-" to a "+" press MANUAL, press FUNC the use the up/down arrows to select the bank.

Press FUNC the 5. The screen should say "bank open" or "bank closed".

Hope this helps.

BTW, you might want to consider the best software anywhere for your scanner, so you don't have to program your scanner manually.

Here is the link, just click on WIN97.

Slow Idiot:

I am going to do you a BIG favor. You didn't know I was psychic, did you? Well, I am, let me give you a reading...

You are the kind of guy who impresses young children, old women, and mentally and technically challenged individuals. You realize that you have that special autistic ability of being able to rap out, and quite profusely--probably, those taps in code. You were quick to realize that individuals with low self esteem, persons of low self-worth and individuals seeming to lack any skills what-so-ever were VERY impressed by such an ability--of course these individuals also failed to realize just how stupid it was to "hero worship" such a trivial ability.

However, for one such as you, un-remarkable in all other ways type of guy, no great IQ, no other real skills or abilities, a general inability to get along in the general society, etc... for you, this was a way of "feeling special." But, it came at a price, it blinded you to how simple others with real abilities, high IQ's, great skills, good social abilities, etc. viewed you. You simply shut your ears, your eyes and your mind to reality; you finally reached a point where you were unable to care, to see... You came to live in your "special world" where you are quite special, talented, skilled, etc. You live there now, you think you enlighten us with your wasted "text verbiage" here, you draw upon others good will and tolerance, you keep thinking you have a great message to impart to us. That soon a revelation will strike us and we will all recognize you for the great man you think you are...

This story goes on and on, indeed, it appears as if it is one of those special, un-ending story with you painted as lead hero, painted as such by you, yourself--of course... well, even you can see where I am going with all of this. And, you know it is true. You know we will be watching your behavior in sheer unbelief and amazement, you realize you really do look quite stupid. You realize you have painted yourself into a corner which you cannot escape. And, it dawns upon you, you have nothing to lose, all credibility is lost--you may as well continue on your present course--there is nothing to be lost--it has already been gone for quite a time... still, your only two choices is facing your peers disgust, or quitting, and I am betting you just can't quit. I have never seen an individual like you who was able...

Good luck...

P.S. I am really not psychic--but you already knew that... It is just that such small intellect as you display is simple to define... but you

knew that--already. You are simply trapped by the particular mental disorder which plagues you, your world is small and therefore you expect it to be so for all others. You are now but an actor on a stage--your part has already been written, you now only perform your part... a limited performance, a small performance, a vile performance, but still--it is yours, and it tells a much larger picture about you--how much better it would be if performed for people who actually cared...

JS

It's ironic how he thumps his chest, claiming to be the bearer of all
that is good and true in the ARS yet he directly and blatantly
violates the very standards he champions. For example, the very fact
that he uses completely off-topic newsgroups as his soap box is
exactly the same as operating a radio on completely un-authorized
frequencies and power levels. His mental disorder prevents him from
seeing this.

It's quite sad, really. We should pity him.

let me assure I do pity him

I would and perhaps fell more sympathy for him but being one of his
favorite targets I find I can not mange may god forgive me

Select the bank with the - sign under it and press the F key and then
the . (Dot/Delay) key to open (+) & close (-) the bank. A Open Bank
receives all talk groups and conventional transmissions regardless of
settings. A closed trunked system receives only talk groups in your talk
group list and a closed conventional system will only receive
transmissions on channels with PL's or DCS set to a certain PL.

For example

0 1 2 3 4 5 6 7 8 9
- + + + - + - + + +

Bank 0 and 6 are closed

Bank 0 is a closed conventional bank

000 CT 460.475 100.0
001 FM 460.075
002 DC 153.770 021

Only transmissions with a PL 100.0 on channel 000 will be recieved,
all transmissions on 001 will be received even if they have a PL or DC
code. In channel 002 only transmisssions with a DC code of 021 will be
received by the radio.

Bank 6 that is closed is a Motorola Type II system

600 MO 856.7775
601 MO 857.7775
602 MO 858.7775
600 MO 859.7775

Two Talk Groups IDS are entered into the talk groups list
58800 Police Dispatach
58816 Police Tactical

Only the two talk groups will be heard and all other talk groups will be ignored.

When a bank is open (+) all transmissions will be heard regardlesss of talk groups ID's or PL/DCS codes used.

To listen to one talk group wait for activity on the talk group and press the PSE key to *PAUSE* the radio.

HTH,

Keith

> Bingo!!!!!

I'm happy you two lazy ass Lids found each other, when ya getting
married?

I suggest you two, plus Markie, Opus and stay out of this thread. It's
only for people like me that want to protect and preserve the quality &
integrity of the amateur radio service. People like you, John Smith,
Opus, Lenny and Markie want to destroy it because you believe people
shouldn't have to learn anything or be good at anything to be a ham radio
operator.

SC:

Sometimes I am convinced that you are an excellent "satire comedian." Other times, you have me convinced you are for real. Sometimes you have me busting a gut and laughing until tears come, other times you yank my heart-stings in pity.

Take this last post of your, it can be viewed as tongue-in-cheek satire, or, it can be viewed as insane rant.

Certainly you cannot place much importance on CW. Amateurs have a real purpose, to expand radio on ALL frontiers. Help in the community, help in educating the youth in radio, help in disasters, help in developing techniques, equip., theory development, etc. (the list really goes on-and-on here)

Probably the least important aspects of all this is rag chewing, contesting, favoritism of individuals and groups, etc. They are fun for some and amateur radio has a place for these activities, but these are self-serving and we must be careful least amateurs on a whole end up being judged on such self-serving behaviors. However, when we are taking from amateur radio for our own personal goals, likes and entertainment we are NOT giving. Or, put simply, I can easily imagine Einstein, Tesla, De Forest, Bell, etc. having a great interest in radio, however, I am in doubt as to them getting excited about having to learn morse to obtain the license.

So, when you go crying "the sky is falling" over amateur radio progressing and dropping an ancient tradition of morse testing, how can any logical mind view you as NOT being self-serving, how can anyone take you seriously at all? Are you a con man attempting to sell us the idea that you really see great benefit in CW? That CW is a major part of radio in 2006? Come on man, anyone crying such nonsense is going to be called on those cons schemes immediately.

You see CW as being a real barrier, something that many who desperately want to become amateurs will avoid and by so avoiding fail to obtain an amateur license. Certainly you cannot really believe that; you can see how people would view you as deranged if you held such views, can't you?

If someone really wants an amateur license, it they are so devoted to hero worship of amateurs as your were--they will end up with that license in their back pocket--even some uneducated and mentally challenged person from the back swamps of DumbBuck Egypt can learn to tap that code if he/she is driven.

I think as a young man, you viewed amateurs in some form of hero worship. I think you viewed them as larger than life. I am afraid that once you obtained your license, these fantasies did not fade. Indeed, you wove these fantasies into your ego and your ego became dependent on your amateur license hanging on your wall. You recognized that if a very large number of people had amateur licenses (say the same number who hold fishing licenses or drivers licenses or contracting licenses, etc.) your feeling of being "special" would go away. So, you began to plot. You began to find ways you felt would stop people from getting licenses and get behind those ideas and push them and sell them. You certainly knew there were other such individuals as yourself out there and they would come to your aid. Indeed, I do not even think you were the one to come up with the original idea, I think that would have been beyond you. Someone else came up with the idea, you just jumped on his/her bandwagon.

So, now we arrive here. And, you are indeed correct, CW does make some shy away from amateur radio. The reward of having an amateur license is just not big enough for them to learn a set of dits and dahs to send messages with, frankly, I see Einstein never bothered. I guess you look at this as a "winning" situation, I do not. I look at it as a evil self-centered plan which you and others are engaged in to limit amateur radio, and it just kind-of-got-that-way because no one has taken you to task.

I know of no good reasons to maintain any CW requirement in amateur testing. Even learning it for historical reasons does not justify the expenditure of time and effort it requires just to purchase a radio, buy an antenna and grab up a mic (and that is exactly what the large majority of amateurs are today, code tapping appliance users.)

In all your rants I see no real reasons for maintaining the CW requirement. In fact, when you are hard pressed and under attack, you admit to having your self-centered self at the core of you manipulations.

If you think I hate you, I do not. If you think I see you as the most evil person I have ever conversed with, I do not--I have some neighbors much worse. I just don't understand you. And, why that is, is because no one here is attempting to "win" by eliminating morse. We are attempting to win by making amateur radio enticing enough to fill our ranks with new bright minds, something YOU SHOULD place much more importance on. Indeed, CW pales in comparison when viewed side-by-side.

Let me leave you with one important "vision" to dwell upon. Next time you are a social event, a cocktail party, a civic function, etc. and you find someone, or some group who is really, really impressed with you

being an amateur radio operator--then, right at that time, take a really, really good look at those people who are so all impressed and tell me if it really matters that you impress "those people?" If you say yes, you and I don't even live in the same universe.

Regards,
JS

Allo mates,

I just purchased a brand spanking new Radio Pro 97. I got it on sale for $149.99. The normal price is $199.99. So I felt this would be a good time to get it.

I have it working fine now off of my rechargeable batteries.

This radio needs a 9 volt, 300 Ma power supply to function correctly.

When I went to look for a power source for it around the house, I discovered that I have three transformers that are 9V 300A, but the plug that goes into the scanner is to large.

I have one power supply that is 9V 800MA and the plug fits perfectly into the scanner. Would thee 500MA more of juice that this power supply allows to pass through be to much for my scanner? Or do I jist need to back to Radio Shack and get an apapter that fits and use my big 273-1667 9V 800MA adpater?
Or better still take the 9Volt 300MA power supply?

Or should I just run it off the 4 AA rechargeable NIMH's that I have?

What is the best option here?

Put another shlimp on the barbee!

I'm a firm believer in using humor and satire to try to make my point.
It's like cracking a walnut with a sledgehammer. Whether or not anyone
wants to accept or agree with me, I hope we can all still have a good
laugh.

> I know of no good reasons to maintain any CW requirement in amateur
> testing.

How about, Requiring it in order to be able to communicate with it?
That's a good reason and you're learning a skill. Keeping people like
Markie off HF doesn't sound too bad either.

The first time you hear 'AAAAAAUDIOOOOOOOOOOOO' or 'skipland skipland
skipland' in the middle of 20meters, you'll get a change of heart and will
want to beg forgiveness at the Church of Hiram. I heard it a couple times
and it made even the hairs on the back of my neck stand up and I was
already born again.

You really are a bitter ham. Lack of CW in the radio diet will do that to
you. Just look at all the hate on eleven meters. Those people are even
gunning each other down in shopping mall parking lots.

The 300 ma rating is the max. rating the scanner will draw so
you need a p.s. needs to be able to provide that much current.
Your 9v 800ma p.s. will work fine,,, as long as the polarity is
correct. The scanner will only draw enough current to work
properly.

6358. 1st Responder Wireless

Newsgroup: rec.radio.scanner
Date: 2006-12-02 16:12:21 UTC
From: "nyscan@gmail.com" <nyscan@gmail.com>

Source record: 4338

1st Responder Wireless News, a subsidiary company of 1st Responder News, is considered the leader in the emergency notification industry, sending incident alerts to pagers, cell phones, PDAs and e-mails.

1st Responder Wireless News (1RWN), already very active, and recognized by most media outlets and Public Safety Officials as the "Industry Leader" in most of the East Coast States, is actively looking for News Correspondents to become active as Incident Dispatchers for your area.

1RWN has recently gone live with a new DISPATCHER REWARDS PROGRAM, the most rewarding incentive program in the industry, which will allow our Dispatchers to log into an online store and buy products ranging from cameras to computers to digital scanners to a subscription to our 1st Responder Newspaper to paid membership into one of our 1st Responder Radio Network affiliates (buff groups with 2-way radio coverage and/or photography groups in Long Island, MA, MD, NJ, NYC, PA and VA with more expected soon...), and so much more from over 100+ prizes, by using points earned by being active on our system! EVERY Dispatcher on our system will now reap rewards for their hard work, dedication and loyalty!

We are now active in AL, AZ, CA, CO, CT, DC, DE, FL, GA, HI, IL, IN, KY, LA, MA, MD, ME, MO, MS, NC, NH, NJ, NM, NV, NY, OH, OR, PA, RI, SC, TN, TX, VA, VI, VT, WA, WV and Canada. 1RWN has already acquired many well known Paging Notification Services including TAC-9 Paging, East Coast Paging, Ohio Fire News, Maryland Fire Network, Virginia Fire Net, Toronto Fire Net, Metro Fire Paging and the National Incident News Network (NINN), with several additional under final negotiations. This is a very exciting time to become involved.

1RWN sends instant notifications for any newsworthy Police, Fire, Rescue, Traffic, Weather and Breaking News event within our coverage areas, to pagers, e-mail, cell phones, PDAs and to our online streaming tickers. The vast majority of our Dispatch Staff is comprised of Volunteer and Career Firefighters, Police/Sheriff Officers, Haz-Mat & Rescue Technicians, 911/ALS/Medevac Dispatchers, ALS, BLS & OEM Personnel and Skywarn Spotters, on local, county, state and federal levels.

1RWN has the industry's MOST COMPREHENSIVE Customer Interface selection process which allows our Subscribers to select EXACTLY what information they want to receive, from what areas and to what devices. In other words, you can select to receive JUST building collapse incidents in Yonkers to be sent to your cell phone, with bridge closures in Philadelphia being sent to your pager. You are no longer restricted to receiving ALL alerts from a region, now YOU decide what you receive

from the average 16,000 monthly alerts sent from any of the areas we cover - 37 States, Washington DC, or Canada!

If you are interested, or would like more information, please check out the website at www.1RWN.com

What a joke of a system.

Almost all of the other notification networks operate on a volunteer basis for their dispatchers. If a dispatcher is in this HOBBY for rewards, they should seek a job in news media where they pay for those tips.

Also, they aren't very nice to deal with when you have any problems. Before they 'took over' some other groups (read forced them to be bought out), everything was running smoothly. Now, things are awkward at best.

At least I'm a ham. That can't be said of you.
```

> Lack of CW in the radio diet will do that to
> you.

Nope, being accused of molesting Boy Scouts did it for me.

Everything that K4YZ/KTN4GN says is suspect and needs to be
scrutinized.

For example, his Civil Air Patrol FOUO letter that was published in the
Nov 2006 issue of PopComm completely contradicts his QRZ.COM/K4YZ offer
to confirm his CAP communications.

That is what this thread is about... if you'd care to stay on topic.

> Just look at all the hate on eleven meters.

I wouldn't know, but there's no need to look there. The hate is
already on RRAP, and K4YZ fosters most of it. When this group becomes
moderated, I expect K4YZ to be banned. He'll have to hang out on the
Nurse or CAP yahoo groups of his own creation and moderation.

> Those people are even
> gunning each other down in shopping mall parking lots.
>
> SC

What a coincidence. K4YZ has offered to "meet" several hams at the
Dayton Hamfest, and there's a lot of hamfest parking at the shopping
mall.

I have a Diamond RH77CA and Maldol AL-500H for sale. Both in excellent condition with the plastic sleeves. Both work perfectly.

Price for both is $50.00 shipped in CONUS

Give Morkie a few minutes. He lives for Usenet and will, within mere
seconds, drop a Mark Morgan Loaf of fertilizer on all messages.

kookathon on clockwork

Ironic, is it not? A man who spends most of his waking hours and spewing
hundreds of posts weekly on Usenet declares others to be "kooks"?

There is something very wrong with him.

mot of his waking hour

nah yu just don't understand I sit down spend a fe w minute and get up
do soemthing else till I need to take a break

but I declare Sllow Code kook becuase he is clearly insane he claims
the wants to preserve ham Radio and yet he propses thing EVEN HE
ADMITS would kill the ARS if enacted

that is clearly the work of a nut job

still wating on your call sign Mr Bell I note by you current
nickaddress that you are focusing your online existance in harrasing a
man you claim is insane and of no import a picualr endevour
(before you acuse me of the same try and use your pea brain) I am here
to take part in the finsihing of the Code Nocode part somewhere round
the R&O I am outa here (ihaven't decided when exactly I will leave
this cesspool like about a week to 2 weeks after I obtain my own extra
class license (depends on the effective date of R&O and to some extent
on the date it is issues and the exact contents

then you can go back to whatever stalking you were doing before or
seek another bright flame to be drawn too as you have to me

Allow me to try to properly spell your own words, Mork. Like a moth to a
flame. You simply cannot resist, can you? You are predisposed to, as Slow
Code says, "dump" on each and every post made herein. You just cannot help
yourself. You obviously have far too much time on our idle hands.
Apparently my previous post hit Baby Mark on the soft spot on his jumbled
head. Your rejoinder was almost decipherable...almost.

And again, as in posts previous, you challenge me to give my callsign as "proof" of my existance. For what? Your third grade bent on Machismo? That is lame, Mark, even for you.

I'll give you my callsign, Mark. Meet me on 17M sometime...legally. I'll give my call every ten minutes as required. In fact, Mark, I am not all that far from you, so chatting on 17M even when the band is down should be easy to do. We can chat there...

Oh, and if r.r.a.p. has turned into a cesspool, look no further than your own mirror. You are part and parcel of the ruination of this group. In fact, Mark, you are the MAJOR reason this group has so sadly deteriorated.

Alexander Graham Bell.
CW tested and FCC approved.
callsign to be divulged on 17 meters....

-
nor can he spell his insults correctly if he is going to attack my spellinghis should be beyond repaorch

I have to totally agree... The Incident Notification used to be a great
hobby for scanner enthusiasts until these guys came around and started
to make it a hobby to buy everyone out so that they could charge for
something that should be free.

I learned it. I passed it. I see it as irrelevant government hurdle
to be passed. It serves no regulatory purpose in the ARS. No other
mode has a stand alone exam that denies access to HF.

> But that's about it. How'd ya like the boy scouts?
>

Fantastic organization. Lots of activities. I'd recommend
boy/girl/venture scouting to any youth. Keeps them busy and they stay

out of trouble and off of drugs.

Hell, even with FirePage Ohio, they charge a one time fee for paperwork,
but, after that, it's reasonably inexpensive.

1st Responder is a joke and they know it. They need to 'reward' their
dispatchers... C'mon.....

Daron IBN08 and his great team of broadcasters that have been
submitting audio files for us to enjoy have been very busy. We had a
lot of new files that have been added this last week:

Just an FYI - you may have to highlight and copy the entire link below
as sometimes it gets cut off due to the web posting

PA, Westmoreland - House Fire
Description:
Length - 16:19
Just before 1400hrs on 22 November 2006, the Westmoreland EOC Fire
Dispatch Desk received a call reporting a house on fire near Rt. 982 in
the Kecksburg section of the county. Station 76 was activated with
command, and stations 35, 36, 37, 38, 58, and 109 were sent as M/A.
Both of the first two units to arrive on scene report heavy smoke
showing. Within minutes, they report flames out the windows and that
there is a burned patient needing EMS attention. This area has limited
hydrants, and the only two that are usable are very long lays. Command
76 immediately orders a tanker shuttle with dump tank, and asks
Dispatch to send additional tankers. While this happens, Station 58
sets up the LZ and the patient is transported away from the scene and
flown to a Pittsburgh burn Center. The water supply is weak at first
which gives the fire a chance to really boil through the wood frame
2-story, causing extreme exposure hazards to nearby garages and out
buildings. The radio traffic gets intense as crews attempt to protect
the exposures by putting more hand lines into operation. They
eventually use foam to stop the spread and the fire is slowly knocked,
however it's almost an hour later before Command places the fire under
control. Standby companies are put into place while crews do overhaul
and mop up.

San Diego, CA - Shooting with Pursuit
Description: Length - 22:44
On the night of November 24, San Diego Police responded to a fight
call, at a party with at least 200 people present, while units were on
scene, one gun shot was heard and they saw one person down. They
quickly got a suspect description, and an officer saw a vehicle leaving
the scene with a possible suspect inside. The vehicle lead them on a
short pursuit, before the four suspects inside the car bailed out on
foot. Two suspects were caught right away and a search with several K9

units caught another suspect.

Xenia, IL - Water Rescue
Description:
Length - 08:45
Xenia, IL November 30,2006 Water Rescue
Hunter was out during heavy rains, he stayed out later than his friend, he was stranded on other side of a creek, before dark. Around sundown the Sheriff's Department was contacted and then they called Xenia Fire Department, who has a Polaris Ranger type ATV, but was unable to reach the man. They called the Flora/Clay County ESDA Rescue Squad, who responded with their Rescue Alive rescue raft. They were able to cross the creek and bring the man back safe. Clay County Ambulance was also on scene.

Added on: 02-Dec-2006
http://www.incidentbroadcast.com/modules.php?name=Downloads&d_op=viewdownload&cid=10&orderby=dateD

Mill Creek, WA - Car and foot pursuit with K9 track
Description:
Length - 12:29
Mill Creek, WA - Mill Creek PD was in pursuit of a car that had 3 robbery suspects in it. The suspects ditched the car and went on foot. Snohomish Co. Sheriff assisted in the foot track along with K9 from Monroe PD. The robbery occurred in King County. At least two suspects we captured.
Version: Filesize: 5.72 MB
Added on: 02-Dec-2006

Westmoreland, PA - House Fire

Description:
Length - 12:02
One day after an unoccupied residential structure caught fire and burned in Manor Twp., Westmoreland County's 9-1-1 line rang again with a caller reporting that the burned out structure was once again on fire. The County Fire Dispatch Desk activated Stations 13 (Command), 87, 57, 3, 106, 10, 14 to respond. Upon arrival, CMD 13 reported the left side of the structure going good, and for the first engine in to lay a hand line to protect the exposure on Side B. Additional tankers were called to the scene to assist. Crews get a good knock on the fire

and it is put under control, but they remain on scene for over an hour overhauling and mopping up. The cause for both fires is believed to be arson, and the fire marshal is still investigating.

South Orange, NJ - House Fire
Description: Length - 17:54
Fire started as an attic fire, quickly spread and became fully involved. 1.5 story frame. Assisting towns were Maplewood, Milburn and West Orange. During the recording you will hear command state that the fire is "out of control" and shortly after that a mayday is transmitted. Then an evacuation. Later on they state the house is a total loss. I don't believe anyone was hurt during the fire.

Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.scanner,uk.radio.amateur,uk.rec.aviation

Dear All,

I have a Signal R532 (A classic!) scanner and it has gone faulty. It powers up ok and the display and all buttons work fine, it just seems not to tune. I can change the frequency display with the buttons but this appears to have no effect on the frequency of operation. I can hear some stations but the level is very quiet.

It could be out of alignment? I have had the covers off and it looks like some of the tuning slugs on the coils have been twiddled (not by me!)

I bought it off EBay and was Sold as Seen as I have wanted to add one of these to my collection.

If anyone can fix it for me there is money waiting!!

I phoned Castle Electronics but they said they were unable to repair these as parts no longer available and they don't have the schematics

Thanks for any help/suggestions/offers

Jim G7NKS

p.s. I know as a "real ham" I should do it myself blah blah blah.....M3 rant blah.....black box....RSCB blah.....dumbing down....

It might need some new sparkplugs. The gaps can foul up after a while.

Thanks for this useful info! I put it down to an antipodean sense of humour
fuelled by our rather dismal performance in the cricket.

Source record: 4268

Good morning gentlemen
My name is Roger and I am a ham Italian operator IW2NPQ, I write this post because from by now almost 2 years to chase the a some DOMINIC TROISI (email, jimbow65@webtv.net) him to have defrauded me 520 dollars for a ham I remove ICOM IC 706 MK2Gs!
Me to have paid with paypal.
Being all demonstrable, but after 2 years not to have recovered my money yet.
Me to never have had problems with sellers and American colleagues... rather to have another respect of the honor.... apparte this shame of man.
Me to be right to believe whether to be ham radio also operated him and to have the certainty that up to 2002 to have written in this forum. to be able to lend a hand to have the data to be able to find him/it?
After 2 years to be matter of principle... not to be able to exist an operative ham that to steal to another operative ham.... it doesn't deserve to be with us.
Me don't believe to ever see my money again but at least to know that the honest people to be away from him.
Me to have sold my radio to purchase his/her icom 706 and to have remained 3 months without radio before having had the money to buy another radio...
Don't want that some other colleague can pass what have passed me for guilt of that shit man!

Me under to bring transaction happened with paypal to confirm that that to hardly have writing!

To be able to require or to write to me to impala65_it@yahoo.it
Me to be sure of your help.

With respect Roger.

I have never said anything in support of Nambla woger

it says some pretty stpid thing and few true tone and smaller and of
less

indeeed I don't recall namble ever coming out here in RRAP woger

You might try Lowe Electronics they were the original importers and
still claim to support them: http://www.lowe.co.uk/retail_secondhand.htm
They might have the servicing info, I got the R535 service manual from
there. They also seem to have a steady turnaround of second hand R532
and R535.

Another site with the operating manuals: http://www.airband-radio.co.uk/

Indeed it does help! many thanks. I'll put the spark plug wrench away
now!!

I have already tagged thec website that does the manuals thanx

Best regards

Jim G7NKS

Sure you do, Marquer, you want to convert everybody to your perverted
lifestyle.

> it says some pretty stpid thing and few true tone and smaller and of
> less

What do you care, you do what they condone!

> indeeed I don't recall namble ever coming out here in RRAP woger

You don't even recall your own name, Marqueer, since you never post
under it, either.

Richard;

The scanner needs a 9v power supply which is capable of delivering a minimum of 300 ma so a supply which is capable of delivering 800 ma is well suited for this purpose.

As long as your power supply does not provide more than 9v, your scanner will not be damaged.

A power supply rated well above the current capacity of the device will actually run cooler than one that runs near it's capacity.

Think about a heavy duty car battery. All batteries run at 12 volts, and no battery will damage your cars accessories, but a battery with a higher amperage rating will run more accesories than a battery with a lower rating.

Rick

Tell me....

is the move towards mobiles / encrypted digital going to kill off scanning
... or is our apetite for more consumer goods going to nuture it ???

Eventually one electronics genius in every large city will invest in the
hardware and software and make the scanned results available to all over
special web-sites.

yea .... but they're (those geniuses) working on the P-4 /
P-5 DTV smart card crack right now. they will , no doubt , be done
REAL SOON but it won't matter either way as the aliens will
come down and " save " us first anyway (soon as we get those
government " rays " turned off that keep them away !) .

gotta go now, dropped my stylish aluminum foil hat and realized I'm
late taking my meds as well , dang !! ... I hate it when that happens
! (cue Outer Limits theme here !!!)

A "ham"...Maybe. A pig? Definately.

> > Lack of CW in the radio diet will do that to
> > you.
>
> Nope, being accused of molesting Boy Scouts did it for me.

Then you shouldn't have led others to believe you did it.

> Everything that K4YZ/KTN4GN says is suspect and needs to be
> scrutinized.

As are the words of every other person, Brain...Such as you and the
Feeble Five.

> For example, his Civil Air Patrol FOUO letter that was published in the
> Nov 2006 issue of PopComm completely contradicts his QRZ.COM/K4YZ offer
> to confirm his CAP communications.

No it doesn't.

> That is what this thread is about... if you'd care to stay on topic.

So far, the thread is about N0IMD lying and misrepresenting the
truth.

> > Just look at all the hate on eleven meters.
>
> I wouldn't know, but there's no need to look there. The hate is
> already on RRAP, and K4YZ fosters most of it.

Nope.

> When this group becomes
> moderated, I expect K4YZ to be banned. He'll have to hang out on the
> Nurse or CAP yahoo groups of his own creation and moderation.

None of my groups are moderated, Morkie...I mean Brain. Sorry.

The only "moderation" any of them get's is making sure they are not
spammers...After that they can post freely.

I've suggested you read any of the archives you'd care to, but
you've obvioulsy never done that.

> > Those people are even
> > gunning each other down in shopping mall parking lots.

> What a coincidence. K4YZ has offered to "meet" several hams at the

> mall.

I've never met you, Brain. Too bad.

Steve, K4YZ

6412. 900 MHz Channel List

Newsgroup: rec.radio.scanner
Date: 2006-12-06 15:39:36 UTC
From: scannerman6@juno.com
Message-ID: <1165419576.283709.232000@j44g2000cwa.googlegroups.com>
Source record: 4292
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Does anybody know what the 900 MHz Channel Numbers are?
I know that the 800 MHz band is channelized. That is how our Radio
Scanners know what frequency to go to when truking. I need the list of
Channels for the 900 MHz band. I am sure that there is one.
So if somebody could provide a link of the 900 MHz frequencies and
their corresponding Channel Numbers, I woul really appericate it.
Thanks An Happy Holidays. :-)

Go to FCC website and look up the CFR47 part 90 rules. You will be
redirected to another server, follow the links. It will take some
looking but they are there.

First I have to admit that i am ignorant, having said that, lol....My gf would like a scanner, her dad is on the fire department, and they recently switched over to 800 mhz. So now all I hear are the tones and then assignment of fireground. My question is, what kind of scanner do I need to buy for her to be able to hear the conversations on the 800 Mhz freq. is a conventional scanner with 800 Mhz ok, or do i need trunking? or digital? I have absolutely no idea. please advise =o)

You would need to supply the city or county fire dept that your gf's dad works for before someone could give you an answer. Most likely it's a trunk type system.

have some federal signal [touchmaster utm-4] with option
13 added. this is the top of the line for them. these list for
over $869.50 per the factory. these our [used] pulled out for up date. open
for offer. i have 10 unit's at this time.
also have some mx 7002-seep light bar's. all yellow with arrow stick built
in them/they come with arrow stick control. no switch box for light bar. all
our in real good shape. front light's/side light's/back light's in white.
plus many other light's, open for offer on these light bar's also.
they do have the [black gear] on the rotor's.grat for wrecker/roll
back/saftey/ or chang to the color you need.

It appears that Fire Dispatch is on 154.145 then are switched to 800 mHz
when enroute and on scene.
Go to this website for actual frequencies:
http://www.radioreference.com/modules.php?name=RR&ctid=1251
A scanner that can receive 800mhz would be fine if this is all you want to
do. You may want to check around other counties or state agencies to see
whether you need a trunking or digital scanner.

Diving into this a little deeper I found this:
All Genesee County police and fire departments, except Flint City, are on the MPSCS. This also includes all Sheriff's Department operations, MSP, F.A.N.G., Parks & Recreation, Bishop International Airport Authority and Animal Control.

This is a Project 25 system which means it's digital. It says they are simulcasting the 154.145 freq for fire dispatch. It's probably a matter of time before the Forest Twp is on this system. You would more than likely need a digtal scanner in the future.

First, you gotta find out if the district/department you gf's dad is in
is transmitting a digital signal or just conventional 800 MHz trunking.

If you go to the following link and do a search, all the freq's as well
as the mode of transmission will be available to you. Then you can
decide which scanner, base or handheld, trunking and/or digital. If it's
a digital signal, be prepared to invest $450 +/- for a scanner. You can
buy them new, or "previously owned".

It would be like living in a nice neighborhood and then the city puts a
landfill next to it. Some people will leave, and some people will stay and
try to get used to the stink.

Eye no ewe r write.

I'm always afraid when no-codes go up to the ISS because they
might start belching and farting on the two meter rig like
they were on CB or something.

So, I went and looked at the link, and it does say that all of genesee county is on a "project 25 standard" this means I would need a digital scanner? or just a trunking? As dave said, dispatch is simulcast on 154.145 that is because they are still using the 'old' fire pagers. I am sorry for all the questions, but like I said I am ignorant when it comes to radio freqs and such. I pasted the frequency information below, I just want to be sure before I make the investment that I get what I need. Even though forest twp is not on the list I am sure that they are using the same countywide system since they assign 'fireground'. Thanks again for all of your help.

DEC HEX Mode Display Description
2402 962 D 25F911 Central 9-1-1 Fire - Dispatch (Simulcasted on 154.145 MHz)
2403 963 D 25FG2 Countywide Fireground 2
2404 964 D 25FG3 Countywide Fireground 3
2405 965 D 25FG4 Countywide Fireground 4

If it were me I would get a digital scanner from either Radioshack or
Uniden. If you get an analog one it would probably be obsolete within a
year or two. The "D" under mode indicates digital.
Dave

NASA wanted me but I had to turn them down. To much work to do down here on earth trying to educate radio amateurs on how to be better radio amateurs.

I understand. I don't have have a problem with that aspect of the organization, and since it involved my children, I'd prefer to keep it the way it is. Adults can do what they want.

> given the way my
> private has been invaded and praded by Steve and his freind I suspect
> I need not explain why we disagree about the BSA

But is has nothing to do with the BSA. Robesin is not in the BSA and I wouldn't want him around my children or anyone else's. But he probably has lots of contact with Cadets; hopefully they're using at least the rule of two.

6454. Do no-code hams wipe their butts?

There are more hero's on ham radio, but after CW is eliminated, old hero's won't die, they'll just fade away... just fade away.

When code is gone your going to see an in rush of lazy people that don't want to be good or skilled at anything, and their frustration over their laziness will be taken out on other hams on the bands. This will turn ham radio into CB.

Dear Mr. Ferguson:

Almost all of Genesee County public-safety has made, or will make, a transition to the State 800 MHz digital system (with the major exception of the City of Flint, which still uses their VHF system). Uniden makes a handheld and a "base" radio for the purpose. I have been using the handheld for a year with good results listening to the Shiawassee system, which re-sends most of Genesee transmissions, as I am on the west side of the county.

Expect to pay close to $500 for a radio that will allow monitoring the state system.

Regards, Mac

Begin, Mark, by undoing the damage you have already caused to No-Code
Technicians.

There is hardly an "our number" in the equation. You are the lone crybaby in
this group, Mark.

Your incessant hand-wringing and petulant whining about the CW requirement
is getting old.

Go cry somewhere else. Your complaints are falling on deaf ears.

NASA WB-57F and T-38s today
```````````````````````````

It is Sun, 11:54am EST (1654z).
A few minutes ago, NASA 918 (T-38N #66-8384) and NASA 926 (WB-57F
#63-13503) departed Patrick AFB.
NASA 918 is heading to KARA; and NASA 926 is heading to Ellington
Field. KARA us Arcadiana RAP in New Iberia LA, and it is usually a
waypoint for NASA T-38s heading to Ellington.
NASA 926 worked the Space Shuttle STS-116 launch last night, using
the callsign Wave 01. He performed photography from 65,000 feet up.
Right now, he is going from FL470 to FL510.
The handoff sequence has been:
133.75
132.65
135.70
126.95
125.075
126.525
From there, they will most likely go to the sequence:
128.225
133.900
124.775
NASA 901 is also up on 126.525.

Code by hand/ear is a quaint skill much loved by old geezers. Just like knowing how to use a slide-rule. Interesting for historical reasons... but not very useful otherwise. And old geezers kick the bucket... so in the end change comes by the minds of the young. Welcome to the 21st century, Marconi.

SC, I remember what happened to the net with the introduction of AOL "newbies". So I can relate to your fears. But I think that scenario will only play out if code AND written exams are abolished. I don't think your average CB'er could pass the technician exam without code.

Now, psychology... lazy people as a rule don't have frustration over their laziness. They only get frustrated by biological needs. Why? because they are L A Z Y.

"I am the only one who has outer filthed Ward" -- James C. "Crackhead"
Cracked voluntarily self-immolates, in MID:
1159678991.838385.310840@m7g2000cwm.googlegroups.com

"When I told Abbie Hoffman that he was the first one who made me laugh
since Lenny Bruce died, Hoffman said, "Really? He was my god." The
combination of satirical irreverence and sense of justice that Bruce and
Hoffman shared was the real spirit behind the Yippies--a term I coined to
describe a phenomenon that already existed: an organic coalition of stoned
hippies and political activists who engaged in such actions as throwing
money on the floor of the New York Stock Exchange, then explaining to
reporters the meaning of that symbolism. Folksinger Phil Ochs summed it
up: "A demonstration should turn you on, not turn you off." So when
journalists link the Yippies with misleading bedfellows, at best it's
careless shorthand; at worst it's deliberate demonization. Osama bin Laden
wanted an aircraft to crash into the Pentagon. Abbie Hoffman merely wanted
to levitate it." -- Paul Krassner, http://tinyurl.com/ehu3v

I heard that too. Some nickel ham came in on the frequency with his lid
operating habits and pissed them off. What else were 20 wpm Extras to do
but put that little turd in his proper place, and why you listening to the
extra portions of the bands anyway. Go play with your model Choo-Choo
trains.

6491. wireless re-transmit available?

Newsgroup: rec.radio.scanner
Date: 2006-12-11 19:43:35 UTC
From: John <jj.shine@att.net>
Message-ID: <Hxifh.3007$Ft4.110@trnddc02>
Source record: 4171

I have a bearcat 800xlt that I hook up to an external antenna and it works fine. I'm trying to figure out a way to be able to move the scanner to a different location (in a house) without having to "hard wire" or to add additional antenna wire. Is there such a thing as a receiver/transmitter that I could connect to the existing antenna - that would "forward" the signal to my scanner no matter where I am in the house??

I'm probably just dreaming - but I thought I'd check it out.

John

why don't you just add a walkman or Ipod FM transmitter (broadcasts the
audio of the scanner thru an FM radio) and carry a cheap
FM radio around the house with you.

I have looked around on Google without much success. I am interested in making my own indoor antenna for my scanner. It must be general coverage and omni directional. I have wire and coax. Just looking for something that is going to be better than the telescoping antenna built into the scanner without going outdoors. If anyone has any ideas or links for websites with some info on building your own indoor antenna please share :)
Thank You and Best Regards
Bill

Unless you are locked into a do it your self project you might look at the radio shack 20-006 telescoping center loaded antenna. It works as well as anything I have tried except roof mounts. I have one on my Pro 94 and BC895 and it really helps, especially on the lower freqs and air band. RM~

PS, If used on a base scanner with a rear panel bnc connector you will need a bnc right angle adapter.

You might try googling the discone antenna. Has a 10:1 frequency range.
Haven't built one myself (yet), but will try one of these days.

you will have all seen the rsults today of K4YZ obessive stalking of
Myself One KB9RQZ

as I said more than a year ago I would not stand for the constant
libel of Robeson and few other in NG for more than year we have been
"treated" to steve effort to wera me down under his torrent of filth
and lies

whe n I saw 100 plus posts on this subject from obviously I could
answer them indivualy, unlike Robeson I have life

I may have steamrolled over something other than steve diatribe if I
steamrooled over you missing your content for this I am sorry

this message will be sent multitime in hope in may survive

following is at this point is the cut and paste at it full measure bit
got afdded as I noted charged made again that I wished to adress

---

Morkie, I will conceed that you know two things that I will never
know...What it's like to lick my excrement off of another man's
genitals, and the going welfare rates in Michigan. steve goes claiming
othermen eat his shit
stop the lying stop the vandalism and stop the bull at this point my
server say you have post 8o plus itme titled with shit or a synoym in
the title

stop lying syaing I eat your shit

stop lying about being miiss quoted
get a life and get help since you are clearly obessed with staking a
man sexualy

the truth I trick you in 1998 when you threnting to MURDER me

stop this whining and face facts you are the one that is sick with
your obesstion for shit

the ruth is you are truly MAD robeson get help

and please stop the lie I have seen that you are doing ANYTHING for my
benifit

and stop lying about the ToS of Google they expressly prohibit your cyvervandalism

and stop lying about my Military service I have my DD 214 as I guess you do likely yours list section 8 as reason for discharge http://kb9rqz.blogspot.com/

I installed a lot of F32T8 fixtures in my basement (24 in total) and have
also had a lot of failures. The cheap ballasts used in these (Home Depot)
fixtures have been the culprit.

Are you quite certain the tubes themselves are going bad?

Both of you are a disgrace to the amateur radio community. In my 40 plus years of ham radio involvement, I have never, ever, once seen such a disgusting display of bad judgment. I will make every effort to notify the FCC of this public posting as a means to challenge your privilege of holding a government broadcasting license. This license is a privilege and not a right, and your activities debase this privilege and the entire amateur radio community.

Cut it out !!!!!

this stops anytime Steve robeson k4yz wants it to stop and not before

it is the RIGHT of memeber of the public to defend themselves against
libel indeed the courts over the years have tended to rule that
because I can defend myself in this admittedly ineffective mannerI
have no recourse against the people like k4yz an extra class ham and
VE

I have not misquoted Robeson nor have I commited the other crimes he
charges

complain to the FCC all you like but the comission in unable to
displine Robeson for his behavior on the USENET and therefore I
conclude would be unable to displine ME for defending myself

Hey folks,
I am a new user to rec.radio.scanner group. I was once a scanner junkie years ago. I had an old 800mhz radio shack scanner. Now I recently purchised a Uniden BC796D Trunker. I read the reviews on the internet and it said this product was not for the "newbie" Heck, I am jumping in with both feet here. I hope you people @ rec.radio.scanner group can help.

Here is my question(s) to the group.
Is there any software I can download that I can use for a nightlogger on my computer?

Is this sucker hard to program? How much radio knowledge should one need to program it? I consider my self to be some what computer tech savy..

I hope I can meet some new freinds with the same or similar Unidens.
Thanks for your time and reading my post.

If you are going to use it for Motorola trunking take it back to the
store and get a BCD396D or BCD996T. It will be useless in a few months
because of rebanding. If you bought it used you are SOL.

I think it is reasonable to say that ham radio was already destroyed
because it has not kept up with change. Eliminating the CW tests will
helbring it back from possible extinction.

Who cares it we get lazy people into the hobby? At least we get some
people.

For logging and recording you can use IDtracker.
http://personal.bellsouth.net/k/d/kd5eis/IDTracker/IDTracker.htm

Ignore the other post about rebanding as it is completely wrong. Uniden has committed to support the 796D for rebanding with a firmware update that you can apply with your computer. Since no Motorola systems have been rebanded yet no one knows exactly what will change. Fiirmware updates offer considerable flexibility but there is no guarantee that any current scanner model will be able to adapt to a rebanded system. Search for rebanding on the Uniden web site for more details on what rebanding is and what scanners they will support.

For programming most people like ARC250.
http://www.butel.nl/bc785/bc250index.html

It is very tedious to program the radio by hand. ARC250 makes it considerably easier.

But that's the whole idea ... to stymie uncensored communications
between rational adults.

That's why with every FCC ruling, the joys of scanning are effectively
reduced in favor of it.

Well, both posters may be right, depending on the area you live in.

The 796 will be able to be reflashed with the proper firmware for 800 MHz. trunking. The rub is if you are in an area that will be using the new 700 MHz. band. This band is not and will not be supported by the 796 even after being reflashed. If your area uses or will use 700 MHz. then you should invest in a 396 or 996.

In Illinois for instance, there are a bunch of sites using 700 MHz right now on the new StarCom21 trunked system that only the 396 or 996 can follow.

I do concur that Arc250 is the way to go for programming and control of the 796. I have 2 of these radios and Arc250 works great!

6535. latest no code info

Newsgroup: rec.radio.scanner
Date: 2006-12-17 00:51:24 UTC
From: Carl Wesser <wesser@hiwaay.net>
Message-ID: <12o954k4cl7e108@corp.supernews.com>
Source record: 4065

I know it's off topic, but for some of us, this is news....

Dec 15, 2006 -- In an historic move, the FCC has acted to
drop the Morse code requirement for all Amateur Radio license classes.
The
Commission today adopted a Report and Order (R&O) in WT Docket 05-235.
In a
break from typical practice, the FCC only issued a public notice at or
about
the close of business and not the actual Report & Order, so some
details --
including the effective date of the R&O -- remain uncertain. Also
today, the
FCC also adopted an Order on Reconsideration, in WT Docket 04-140 --
the
"omnibus" proceeding -- agreeing to modify the Amateur Radio rules in
response to an ARRL request to accommodate automatically controlled
narrowband digital stations on 80 meters in the wake of rule changes
that
became effective today at 12:01 AM Eastern Time. The Commission said it
will
carve out the 3585 to 3600 kHz frequency segment for such operations.
Prior
to the long-awaited action on the Morse code issue, Amateur Radio
applicants
for General and higher class licenses had to pass a 5 WPM Morse code
test to
operate on HF. The Commission said today's R&O eliminates that
requirement
for General and Amateur Extra applicants.

"This change eliminates an unnecessary regulatory burden that may
discourage
current Amateur Radio operators from advancing their skills and
participating more fully in the benefits of Amateur Radio," the FCC
said.
The ARRL had asked the FCC to retain the 5 WPM for Amateur Extra class
applicants only. The FCC proposed earlier to drop the requirement
across the
board, however, and it held to that decision in today's R&O.
Perhaps more important, the FCC's action in WT Docket 05-235 appears to
put
all Technician licensees on an equal footing: Once the R&O goes into
effect,
holders of Technician class licenses will have equivalent HF

privileges,
whether or not they've passed the 5 WPM Element 1 Morse examination.
The FCC
said the R&O in the Morse code docket would eliminate a disparity in
the
operating privileges for the Technician and Technician Plus class
licensees.
Technician licensees without Element 1 credit (i.e., Tech Plus licensees)
currently have operating privileges on all amateur frequencies above 30
MHz.

"With today's elimination of the Morse code exam requirements, the FCC
concluded that the disparity between the operating privileges of
Technician
Class licensees and Technician Plus Class licensees should not be
retained,"
the FCC said in its public notice. "Therefore, the FCC, in today's
action,
afforded Technician and Technician Plus licensees identical operating
privileges."

The wholesale elimination of a Morse code requirement for all license
classes ends a longstanding national and international regulatory
tradition
in the requirements to gain access to Amateur Radio frequencies below
30
MHz. The first no-code license in the US was the Technician ticket,
instituted in 1991. The question of whether or not to drop the Morse
requirement altogether has been the subject of often-heated debate over
the
past several years, but the handwriting has been on the wall. A number
of
countries, including Canada, no longer require applicants for an
Amateur
Radio license to pass a Morse code test to gain HF operating
privileges. The
list has been increasing regularly.

The FCC said today's R&O in WT Docket 05-235 comports with revisions to
the
international Radio Regulations resulting from the International
Telecommunication Union (ITU) World Radiocommunication Conference 2003
(WRC-03). At that gathering, delegates agreed to authorize each country
to
determine whether or not to require that applicants demonstrate Morse
code
proficiency in order to qualify for an Amateur Radio license with
privileges
on frequencies below 30 MHz.

Typically, the effective date of an FCC Order is 30 days after it appears in
the Federal Register. That would mean the Morse requirement and the revised
80-meter segment for automatically controlled digital stations would likely
not go into effect until late January 2007.

The ARRL will provide any additional information on these important Part 97
rule revisions as it becomes available.

Yes, the 796D does not cover 700 MHz and if that band is essential the original poster should consider the newer models you mentioned. The 700 MHz issue is not related to rebanding at all since that only affects 800 MHz.

I am sorry but I missed the first part of this thread.

First of all, I have to say that I have only been dispatching for 1st
Responder for about 7-8 months. I came to them via Tac9Radio, of
which I dispatched for about three years.

I was and still am very impressed with 1st Responder Wireless, for
several reasons.

They are all about Quality versus Quantity. We are only allowed to
send out pages that are not confirmed by a unit on scene. No pages
sent out based on PD/FD/EMS/ALS dispatch. No simple smoke showing
calls dispatched until confirmed by crews entering attack mode or a
"working fire" being called by IC. If a dispatcher has a question
about whether a call is dispatch worthy, they are encouraged to ask a
supervisor. It took me a while, and a few friendly admonishments
before I got it down (even though I was a FF for 18 years and even
worked in a 911 center for 5 years).

1st Responders dispatcher also frequent hold meetings to discuss
issues and training. Virginia state dispatchers are having a meeting
this month and the 1st Responder general manager is attending.

So tell me, what is wrong with rewarding dispatchers?

Brian

Would anyone happen to have the manual for a radio shack htx-212 2 meter rig in either pdf format or in .txt? I am blind, and need to try to figure out how to set the pl tones on this rig. If you have one, or can point me to a web site, that would be great. Just e-mail to this address. Dana@panix.com Tnx.

I never said you did.

> stop lying about being miiss quoted

You ARE misquoting me. Over and over.

> get a life and get help since you are clearly obessed with staking a
> man sexualy

I have a life. It's called employment. You wouldn't know about
that, would you?

And what is "obessed"...?!?! And "staking" a man sexualy"..?!?!

> the truth I trick you in 1998 when you threnting to MURDER me

You can't trick your way out of a paper bag, fatboy, and I never
threatened to murder you.

And further retelling of same is yet another lie.

> stop this whining and face facts you are the one that is sick with
> your obesstion for ####

What's an "obesstion"?

If you meant OBSESSION, then you're talking to yourself since YOU
keep requoting it over and over and using that word blatantly.

> the ruth is you are truly MAD robeson get help

The 'ruth" is...?!?!

I don't know anyone named Ruth in my family.

> and please stop the lie I have seen that you are doing ANYTHING for my
> benifit

You mean your BENEFIT...?!?!

I keep hoping that you'll wake up and realize what a fool you're
making of yourself one day. One can always hope.

> and stop lying about the ToS of Google they expressly prohibit your
> cyvervandalism

What is "cyvervandalism"...?!?!

> and stop lying about my Military service I have my DD 214 as I guess
> you do likely yours list section 8 as reason for discharge

The only thing you ever serviced in the military was a drunk
soldier through a knothole in the latrine.

I have a BC796D.

The programming software that comes with the radio is pretty bad.
The money spent for software like Butel ARC250 is well worth the expense.

Thanks very much for all the information. I have gotten out my wallet
and put forth the extra money for the Butel ARC250 Pro software. Now I
just need to find out how to set up my computer to record as a night
logger. And find some groups for local scanner frequencies.
Again, I can't thank you folks enough. I hope someday I can help
anyone one of you.

The ARC250 software has a built in recorder feature.
Just make sure you turn on record mode for the channels you want to
save.

6557. Airband Worse With External Antenna!

Newsgroup: rec.radio.scanner
Date: 2006-12-18 02:57:35 UTC
From: mikeg@mikeg.net
Message-ID: <1166410655.363436.4430@f1g2000cwa.googlegroups.com>
Source record: 4087

So, I've been setting up a Radio Shack 433 scanner in the basement to pick-up the local airband frequencies. I bought a proper airband antenna, and over the last week, I've had it temporarily mounted to the wall in my basement, and reception has been okay. Today, I finally got around to mounting it on the roof of the house, and now reception is worse! I can barely pick up anything at all. Strange thing is, if I connect my handheld aviation transceiver to the antenna, I can hear great, even at full squelch. But with the 433 (or the 2055 that my wife uses to listen to the cops) I can hardly make out anything. I'm puzzled as to how an antenna-receiver combination that was working tolerably in the basement can now not be working at all with the antenna mounted properly! Any ideas???

Hi all. Just wanted to say thanks to everyone who responded. I got the manual, then got it into .txt then got a ham to look for a picture of the rig on the net so he could tell me the button layout. I got all my pl tones in and everything is rorking just fine. Thanks from Dana in Griffin, Georgia. n4pge.

Hello. I'm Bill Crowell, W6WBJ, and I've been a ham for 47 years now. I'm a good operator, and I'm here to tell you that Riley Hollingsworth is full of shit. He HAS NOT designated my renewal application for a hearing; he just wanted to defame my by trying to make everyone THINK he had done so. If you carefully read the warning notice which he sent me, you'll note that it says, in pertinent part:

"the issue of renewal of your license has been referred for designation of a hearing"

What this means is:

(1) it hasn't been designated for a hearing yet. It's merely been "referred" for such a designation. No hearing date has been set, nor is it clear that one will EVER be set.

(2) "referred for designation" simply means that Riley the bullshit artist has asked his superiors for permission to take my case to a hearing. It is by no means clear that they will grant his request. Hearings are expensive, and there is no reason to take me to a hearing because I've done nothing wrong. Indeed, judging by the passage of time since he sent me my warning notice, with no hearing deisgnation order yet issued, it looks increasingly unlikely that such permission has been granted.

What we have here, gentlemen, is another example of Riley Hollywood pulling the wool over your eyse by trying to make it appear that he is taking me to a hearing, when in fact he has not done so. You have been used. Abused. When are you going to wake up to what a dirty son of a bitch old Riley is?

You can get Canadian frequency info direct from the Govt. at
http://sd.ic.gc.ca/engdoc/main.jsp
You can download full files for your area, or do searches. Quite
handy.

Steve

Your aviation transceiver is better quality than the scanners which are
evidently being overloaded. An FM broadcast filter might help -

SeppoP wrote:

> I guess you've checked the antenna cable connectors?

Yep, the cable's fine. And it works fine with the handheld, so I think the overload issue is the most likely culprit. I've got a bandpass filter on order, so I'll give that a try.

Greetings All!
I have been toying with the idea of building a discone antenna for scanning. I have a couple of junk TV antennas and I think I will make good use of the elements and construct a discone. I have thought about using the UHF end off of one and put it on a small rotor for directional use in the UHF bands. Just some fodder for the brain. Have a great week! Jon in Upstate South Carolina.

Just keep the VHF too and be sure to turn it vertical. Should make a
great UHF/VHF beam.

Only problems with a BP filter (aside from its gradual skirts, unless it has
5 poles or more) is you will have to disconnect it to listen to other freqs
and its attenuation on the likely culprit, FM broadcast, will be minimal.

The scanners are dedicated to airband (providing feeds to LiveATC.net) so removing the filter isn't an issue. I installed an AOR ABF-125 filter tonight, and the overload problem seems to have been solved. I'm still not overwhelmed with the quality compared to what I get from my airband transceiver, but that's $300 vs. $100, I guess. I might try the FM notch filter, too, and see if that makes things any better, but for now, at least I'm up an running. Thanks to everyone for their help / suggestions...

Excellent condition. Full 800 Mhz. All functions work 100%. Original box and manual. I will also include 6 AA NiMH Rechargable batteries with charger and rubber duck antenna.

Price is $100 plus shipping in CONUS

Also try one of the real cheap FM notch filters from Radio Shack. For me,
it worked better than the expensive PAR one with an FM broadcaster a mile
away.

Make a "Slim-jim" (J-pole) from some twinlead/hookup wire.
Tack it high up in the wall,and call it good.

Greetings!
This is exactly what I am currently using for an outdoor scanner antenna, a J- pole. Mine is outdoors and was actually cut for the 2 meter ham band, 144-148 mgh, but it works very well on all bands for receive purposes. You should get very good results on an indoor version as I know several hams who use a j-pole inside for transmit and receive. Have yourself a Merry Little Christmas! Jon in Upstate South Carolina.

HAM isn't as popular as it used to be. All of the old HAMS have either died off or are no longer on the air for various reasons. When a service is threatened due to lack of interest, something must be done to encourage people into the hobby. The FCC decided to eliminate one of the hardest parts of obtaining a ticket in an effort to encourage people to obtain a license and hopefully keep HAM radio alive and well. Why is it I do not hear much code on the bands anymore? It used to be that every ship at sea would communicate via key. Not today. Not in the age of Satellites. So, why would you feel the code should still remain an active part of being a HAM? Do YOU still use code? If so, for what?

Yeah, keep HAM back into the old days and don't evolve with technology. That's the way to do it. It was better in the old days when you had to bust your ass to learn a code that you would probably never use or even listen to.

Time to move forward. With the cost of equipment far more expensive than what CB used to be in the 70's, I seriously doubt HAM will turn into what CB has become. Also, you fail to mention the fact that the FCC DOES monitor and enforce HAM radio unlike CB that's become a zoo.

Anyone can go to the FCC enforcement website and read the many reports of hefty fines imposed on commercial radio and HAM alike.

And before HAM turns into a CB zoo, it would have evolved a lot further than it is today and people still wouldn't be able to buy a HAM toy to use like CB. Enforcement will become a HAM wide effort, whereas, established HAMs will have to keep an eye on new operators to ensure they don't cross the line and if they do, turn them in to the FCC for action. Most HAMS I know can work together to locate the fixed transmission of another HAM.

So, relax. You will probably be gone to the big HAM shack in the sky before HAM goes the way of CB.

I installed the PAR FM notch filter tonight, and it made a huge
difference over the bandpass filters I'd previously tried. I'm very
happy with the quality now, and I can avoid having to upgrade the
scanners to real aviation recievers. Thanks again for all the input...

The pro-code/no-code debates remind me of the Am/SSB debates on the ham
bands back in the 70's.

so what are you SC,a fortune teller,soothsayer,prophet or what?
I have been studying the code for a while now and I know all the
letters and everything
but I am very slow with it yet. My goal has been to take the code test
in January,I have already passed the tech and general tests.But I gotta
tell you,all the crap from guys like you
have really been a turn off. "Laziness,dumbing down,end of ham
radio,all that other ignorant crap from a bunch of these people make me
think why in the world learn the code,I sure would
not want to make a contact with one of these guys.No way my sending
would be good enough for these perfect hams and who needs the grief.But
you have it all figured out and know what the future holds for this
HOBBY.So I may go ahead and take the test next month and I might not.In
the end it wont make any difference will it?I really wish you and those
like you would accept the reality of the way things are and let it go,
enjoy the hobby and stop spreading hate and discontent.You just drive
people away with that junk.

Don't know if any other CB's do this or not but I purchased a Motorola system 500 CB at an estate sale 10 or 15 years ago that will scan all 40 channels and has the controls in the mic. I never could locate a manual for it and still have not figured out all the features on it. RM~

PS, Still have it and it looks like a new radio as I only used for one vacation trip.

Bolt 21 AARing FL-ANG "FANGs"
``````````````````````````````

FL-ANG "FANGs" (F-15s out of Jax IAP) have been up today. Heard them in
AAR with MacDill KC-135 tanker "Bolt 21." They were using the freq
343.0 for boom comms.

Also heard Sealord on 284.5 handing off the FANGs to discrete 376.9.

-=-=-=-=-=-=-=-=-=-=-=-
-= who knows about it? =-
-=-=-=-=-=-=-=-=-=-=-=-

Many people know, both in the establishment and media, and among the general public. Despite an absence of its target from the UK for more than two years, the echoes of paranoia can still be heard loud and clear from across the water. When it started in 1990, the only people who knew were those in BBC television who were spying on my home, and a few radio broadcasters. There were a few cases of public harassment, but very little compared to the situation that developed a couple of years later.

The list today includes BBC TV staff (newsreaders such as Martyn Lewis, Michael Buerk, Nicholas Witchell), people from radio stations such as Chris Tarrant of Capital and Radio 1 DJs, people in the print media, but also many people in the general public. All united in a conspiracy which breaks the laws which the UK does have regarding harassment, and all completely uncaring for any semblance of decency or elementary respect for individual rights.

The British police (obviously) do know the nature of the harassment and in all probability the identity of those behind it. Some time ago I made a complaint to my local police station in London, without positive result. The UK police are failing in their duty to see the law enforced in not checking the abuse.

6610. Digital Scanners In Cornwall Ontario

Newsgroup: rec.radio.scanner
Date: 2006-12-29 04:50:31 UTC
From: Wayne <photo_nut72@hotmail.com>
Message-ID: <oj79p25u113vja31of51797r5m2hkvh9hj@4ax.com>
Source record: 4140

I was just wondering if anybody in the area is able to receive the local police and fire department on one of the new digital scanners or if the signal is encrypted.

TIA

6611. GeorgeF update

I'm in Brockville and I just have a "normal" scanner. I can't pickup
the local city police but I can listen to some OPP and the fire dept
is no problem at all.

Guess you'd better check into what the Secret Service does.

Get back to me, boy.

I never stated whether he was guilty or not, did I, boy? I merely stated MY
OPINION, boy.

Please, try to PAY ATTENTION.
